The Permeability of Natural Membranes Hugh Davson, James Frederic Danielli, 1943 **the permeability of natural membranes** , *The Permeability of Natural Membranes, Etc* Hugh DAVSON (and DANIELLI (James Frederic)), James Frederic DANIELLI, 1943 **The Permeability of Natural Membranes, by Hugh Davson and J. F. Danielli. With a Foreword by E. Newton Harvey. Facsim. of the 1952 Ed** Hugh Davson, *The Permeability of Natural Membranes, by Hugh Davson and J.F. Danielli. With a Foreword by E. Newton Harvey* Hugh Davson, 1952 *The Structure of Biological Membranes* Philip L. Yeagle, 2004-06-28 Recent research has provided an abundance of new information on membrane biochemistry Now more than ever it is essential to update our current understanding of membrane structure and function to fully appreciate and apply these findings Completely revised and updated to reflect advances in the field *The Structure of Biological Membranes* **Membrane Research: Classic Origins and Current Concepts** A. L. Muggleton-Harris, 2013-10-15 *Membrane Research Classic Origins and Current Concepts* is a special volume of the *International Review of Cytology* dedicated to Dr Danielli on the occasion of his retirement from official duties The central theme of the volume is membranes The diversity of topics ranges from the biogenesis of membranes and their components to the use of optical and lectin probes as a means to study the structure physiology and interactions of cell components and organelles in plant and animal systems The book begins with a study on the cell surface of the mammalian embryo and the events associated with the formation of the differentiated blastocyst This is followed by separate chapters on the structural associations between the inner and outer bacterial membrane the interactions of cell wall and membrane in plant cells the morphological and functional aspects of membranes and methods for studying the physiology of cell and organelles at the membrane level Subsequent chapters deal with the synthesis of cellular proteins and glycoproteins techniques for fixing and preserving the ultrastructure of the membrane the synthesis of artificial organelles and the effects of drugs and chemicals on membrane transport utilizing kidney tissue and vesicles This book provides an outstanding reference source for all scientific researchers and teachers *The Movement Of Molecules Across Cell Membranes* Wes Stein, 2012-12-02 *The Movement of Molecules across Cell Membranes* provides an understanding of the molecular basis of the movement of substances across the cell membrane by discussing the composition and structure of cell membranes Comprised of nine chapters the book starts by discussing the theory of irreversible thermodynamics to membrane transport followed by a discussion of the Eyring analysis of diffusion It then discusses the model for movement into and across the cell membranes Other chapters focus on the existence of pores in the red cell membranes and the ion movement across the erythrocyte membranes The book s final chapter considers the four classifications of membrane based models which include the mobile carrier model the pore model and the two classes of enzyme models This book is intended for research students research workers biochemists biophysicists and physiologists Pharmacologists in the clinical field as well as research workers in agriculture will also find

Current Topics in Bioenergetics D. Rao Sanadi,2014-06-28 Current Topics in Bioenergetics Volume 9 presents the theoretical thermodynamic perspective of energy transducing reactions This book provides a detailed kinetic analysis of a specific aspect of an ion pump Organized into seven chapters this volume begins with an overview of the quantitative relations between measurable parameters of energy transducing systems This text then examines the probes for intracellular pH determination which stimulate the development of additional methods and their application in pathology and pharmacology Other chapters consider studies with isolated proteins or protein complexes derived from the membranes This book discusses as well the chemistry of photosynthesis and oxidative phosphorylation The final chapter deals with the advances in the use of photo affinity labeling in the study of the structure of ligand sites on proteins which became possible only in conjunction with the development of methods for the isolation of peptides and their sequence determination This book is a valuable resource for biologists and biochemists

Membrane Transport Daniel C. Tosteson,2013-05-27 This is a fascinating collection of personal accounts which is a must read for anyone interested in membrane transport or the history of the development of the current picture of membrane transport physiology This delightful book could serve variously as a history for investigators and historians or as a textbook for advanced students No biology or medical library should be without it

Membrane Processes G. Benga,H. Baum,F.A. Kummerow,2012-12-06 The burgeoning interest in biomembranes in recent years has been such that membranology is now virtually a subject in its own right cutting vertically as it were through the strata of conventional disciplines from mathematics and physics through chemistry to biology The very scope of the topic is thus so daunting that it is tempting to treat it only at one stratum of this hierarchy be it the biophysics of phospholipid bilayers or the biochemistry of interactions at the cell surface Such an approach is entirely valid particularly among specialists with common interests However this approach does present a distorted perspective to the newcomer to the field and more significantly it fails to stimulate cross fertilization of ideas among workers at the various disciplinary levels For example as in all areas of molecular biology the clinicians are frequently unaware of the contributions to their problems that might be made by the application of more basic knowledge and techniques Conversely biochemists or biophysicists may be ignorant of the existing practical problems to which they might address their expertise

Human Physiology Gillian Pocock,Christopher D. Richards,David A. Richards,2018 The new edition has been significantly revised to include an expanded problem section at the end of each chapter with more quantitative examples and some clinical problems where appropriate The clinical physiology chapter is now broken into several short chapters *Proceedings of the Conference on Natural and Synthetic Membranes Sponsored by Blood Research Institute, Incorporated, Held at the Harvard Club Boston, Massachusetts, November 8-9, 1967* ,1967 **The Natural Radiation Environment VII** J.P. McLaughlin,E.S.

Simopoulos, F. Steinhäusler, 2005-03-30 The Natural Radiation Environment Symposium NRE VII the Seventh in the NRE series which commenced forty years ago in 1963 at Rice University Texas was held in Rhodes Greece in May 2002 During the intervening four decades the research work presented at these NRE Symposia has contributed to a deeper understanding of natural radiation and in particular of its contribution to human radiation exposures It is clear from the quality and diversity of the 143 papers in this volume of Radioactivity in the Environment series that the study of the natural radiation environment is an active and continually expanding field of research The papers in this volume fall into a number of main and topical research areas namely the measurement and behaviour of natural radionuclides in the environment cosmic radiation measurement and dosimetry the external penetrating radiation field at ground level TENR Technologically Enhanced Natural Radiation and NORM Naturally Occurring Radioactive Materials studies assessment of the health effects of radon regulatory aspects of natural radiation exposures In these papers the results of many new surveys of natural radionuclide levels in the environment and of improved methods of detection are described While some of the natural radiation sources investigated are unmodified by human activity many accounts are given here of exposures to natural sources which have been enhanced by technology Such TENR and NORM exposures are shown to range from activities such as mining oil and gas exploitation the use of industrial by products as building materials to space travel to name but a few In several cases quite high doses to some individuals are shown to occur Accounts are given here of methods to prevent and reduce exposures to such sources

The Physical Chemistry of MEMBRANES B. Silver, 2012-12-06 Ls book is an account of what physical chemistry has to say about the structural electrical and transport properties of biological membranes and their simplest model the lipid bilayer The accent throughout is on basic ideas In contrast to the essentially descriptive approach characteristic of texts on membrane biochemistry our underlying themes are the role of force and entropy in maintaining membrane organization in determining the electric fields and ionic environment of membranes and in regulating the passage of molecules and ions across membranes Although experimental findings will always be the touch stone against which theory will be tried no attempt is made to present an exhaustive survey of experimental data On the other hand there is discussion of the nature and limitations of the results obtainable by the major laboratory techniques The treatment is at the level of an advanced undergraduate course or an introductory survey suitable for post graduate students carrying out research in biochemistry biophysics or physiology The mathematical demands on the reader are trivial The few forbidding equations appearing in Chapter 7 are soon whittled away to simple practical expressions Although the current voltage characteristics of nerves are traditionally the province of biophysics rather than physical chemistry certain aspects relevant to the electrical activity of nerves are nevertheless included in this text namely membrane and diffusion potentials and conductivity fluctuations Where rival theories exist conflicting convictions have been presented but not necessarily accorded equal approbation The author has a viewpoint
