Coercive Concern Reva Jaffe-Walter, 2016-03-16 Many liberal minded Western democracies pride themselves on their commitments to egalitarianism the fair treatment of immigrants and the right to education These environments would seem to provide a best case scenario for the reception of immigrant youth But that is not always the case Coercive Concern explores how stereotypes of Muslim immigrants in Western liberal societies flow through public schools into everyday interactions informing how Muslim youth are perceived by teachers and peers Beyond simply identifying the presence of racialized speech in schools this book uncovers how coercive assimilation is cloaked in benevolent narratives of care and concern Coercive Concern provides an ethnographic critique of the concern that animates integration policy in Danish schools Reva Jaffe Walter focuses on the experiences of Muslim youth at a public school where over 40% of the student body is of immigrant descent showing how schools operate as sites of governance These efforts are led by political leaders who promote national fears of immigrant take over by teachers in schools and by everyday citizens who are concerned about problems of immigration Jaffe Walter exposes the psychic and material costs immigrant youth endure when living in the shadow of social scrutiny but she also charts a path forward by uncovering the resources these youth need to attain social mobility and success

The Aptitude Myth Cornelius N. Grove, 2013-06-19 The Aptitude Myth addresses the decline in American children's mastery of critical school subjects. It contends that a contributing cause for this decline derives from many Americans' ways of thinking about children's learning. They believe that school performance is determined very largely by innate aptitude. The Aptitude Myth traces the deep historical origins, the spread and elaboration, and the eventual triumph of the belief in the determining power of mental abilities given at birth and therefore fixed. Covered is 600 B.C.E. until 1926 when the SAT was first administered. The belief in aptitude assumed by many Americans to be the modern view of learning ability is revealed as an archaic way of thinking that originated in the imaginations of our ancient forebears and gradually gained credibility over 2,500 years. In recent times the belief became elaborated to include the fanciful notion that more than modest academic study injures a child's health. Having inherited this mindset, Americans don't know how to insure that children gain mastery. A new mindset is needed. The final chapter offers a transformative mindset.

The Rise of American High School Sports and the Search for Control Robert Pruter, 2013-08-29 Nearly half of all American high school students participate in sports teams. With a total of 7.6 million participants as of 2008, this makes the high school sports program in America the largest organized sports program in the world. Pruter's work traces the history of high school sports from the student-led athletic clubs of the 1800s through to the establishment of educator control of high school sports under a national federation by the 1930s. Pruter's research serves not only to highlight this rich history but also to provide new perspectives on how high school sports became the arena by which Americans fought for some of the most contentious issues in society, such as race, immigration, and Americanization, gender roles, religious conflict, the role of the military in democracy, and the commercial exploitation of our youth.
