Soil Water Repellency C.J. Ritsema, L.W. Dekker, 2012-12-02 It has become clear that soil water repellency is much more wide spread than formerly thought Water repellency has been reported in most continents of the world for varying land uses and climatic conditions Soil water repellency often leads to severe runoff and erosion rapid leaching of surface applied agrichemicals and losses of water and nutrient availability for crops At present no optimum management strategies exist for water repellent soils focusing on minimizing environmental risks while maintaining crop production The book starts with a historical overview of water repellency research followed by seven thematic sections covering 26 research

chapters The first section discusses the origin the second the assessment and the third the occurrence and hydrological implications of soil water repellency The fourth section is devoted to the effect of fire on water repellency section five deals with the physics and modeling of flow and transport in water repellent soils section six presents amelioration techniques and farming strategies to combat soil water repellency and section seven concludes the book with an extensive bibliography on soil water repellency

Livestock and the Environment Ralph H. Ramsey,1974 **10 Years of Livestock Policy Analysis,1992-2002** ,1995-01-01 *Food Dependency in the Middle East and North Africa Region* Chantal Le Mouél,Bertrand Schmitt,2018-09-10 This volume covers the Middle Eastern and North African regions who are increasingly dependent on imports from abroad for covering their domestic food needs Results of this study show that this import dependence is likely to increase further by 2050 Some sub regions hardly reach sustainable levels the Maghreb Near and Middle East could import 60 to 70% of their food needs These results are indicative whatever the considered scenario but especially if climate change impacts become more severe

Livestock and the Environment M. L. Rowe,Linda Merryman,1976 **A Disequilibrium Macroeconometric Model for the Indian Economy** Kaliappa Kalirajan,Shashanka Bhide,2017-07-12 This title was first published in 2003 This text presents a new approach to incorporating regional details on production in a disequilibrium macroeconometric model The early studies on disequilibrium dealt with either partial adjustment models or models involving excess demand or supplies in markets In this study the authors consider a different type of disequilibrium

model one in which econometric analysis makes use of the varying coefficients stochastic production frontier approach which permits estimation and analysis of production efficiencies of individual producers The book also presents an innovative approach to production modelling in macro econometric models as it provides a useful framework for incorporating production efficiencies and regional details of production in the macro models It is a pioneering study that combines the stochastic frontier approach with macro econometric modelling Primarily focused on India it also provides insights into problems in modelling economies of other developing countries

Modern Techniques of Rice Crop Production Naeem

Coping with Uncertainty Kurt Marti,Yuri Ermoliev,Marek Makowski,2009-12-24 Support for addressing the on going global changes needs solutions for new scientific problems which in turn require new concepts and tools A key issue concerns a vast variety of irreducible uncertainties including extreme events of high multidimensional consequences e g the climate change The dilemma is concerned with enormous costs versus massive uncertainties of extreme impacts Traditional scientific approaches rely on real observations and experiments Yet no sufficient observations exist for new problems and pure experiments and learning by doing may be expensive dangerous or impossible In addition the available historical observations are often contaminated by past actions and policies Thus tools are presented for the explicit treatment of uncertainties using synthetic information composed of available hard data from historical observations the results of possible experiments and scientific facts as well as soft data from experts opinions and scenarios

An analysis of the effects of climate change on livestock Food and Agriculture Organization of the United Nations,2023-09-06 This technical report examines the connection between climate change and livestock focusing on the impacts on livestock production systems The study explores various methodologies from the literature and analyses their application in a practical test case in the Lao People s Democratic Republic The assessment estimates direct and indirect effects of climate change on the livestock sector by focusing on three main methodologies retrieved from the scientific literature and applied to the specific case of Lao People s Democratic Republic The results reveal

significant effects of climate change on cattle and buffaloes the main ruminant species in the country The findings showed significant losses in Lao People s Democratic Republic production due to heat stress affecting dry matter intake For instance under the representative concentration pathway 2 6 scenario the analysis estimated a 19 percent loss in meat production and a 18 percent loss in milk production by 2085 The thermal humidity index used as a proxy for milk production estimation yielded similar results On a positive note the study revealed that the carrying capacity and the number of potential livestock units are expected to increase from 2020 to 2080 counteracting some of the negative effects of climate change induced by heat stress The proposed methodologies can be combined to provide a comprehensive understanding of the current and future state of the livestock population and production While the effects may vary in different regions and production systems the report emphasizes the importance of implementing strategies to mitigate climate change impacts Overall this report provides crucial information for policymakers and agencies involved with the livestock sector to guide interventions and address the challenges posed by climate change
