**The Ape Within Us** John Ramsay MacKinnon, 1978      *The Primate Origins of Human Nature* Carel P. Van Schaik, 2016-01-26 The Primate Origins of Human Nature Volume 3 in The Foundations of Human Biology series blends several elements from evolutionary biology as applied to primate behavioral ecology and primate psychology classical physical anthropology and evolutionary psychology of humans However unlike similar books it strives to define the human species relative to our living and extinct relatives and thus highlights uniquely derived human features The book features a truly multi disciplinary multi theory and comparative species approach to subjects not usually presented in textbooks focused on humans such as the evolution of culture life history parenting and social organization      Lu Xun and Evolution James Reeve Pusey, 1998-01-29 Lu Xun 1881 1936 China s greatest modern writer remains important today both as an official icon and a patron saint of dissent This book deals with Lu Xun s struggle to make sense of the Darwinian Revolution It illuminates not only Lu Xun s thought but also the current crisis in Chinese thought caused by the loss of faith in Marxism      Religious Program Specialist 3 & 2 C. Joseph Preston, 1982      **Macro Cultural Psychology** Carl Ratner, 2012 This book articulates a bold new systematic theory of psychology culture and their interrelation It explains how macro cultural factors social institutions cultural artifacts and cultural concepts are the cornerstones of society and how they form the origins and characteristics of psychological phenomena This theory is used to explain the diversity of psychological phenomena such as emotions self intelligence sexuality memory reasoning perception developmental processes and mental illness Ratner draws upon Lev Vygotsky s sociocultural psychology Bronfenbrenner s ecological psychology as well as work in sociology anthropology history and geography to explore the political implications and assumptions of psychological theories regarding social policy and reform The theory outlined here addresses current theoretical and political issues such as agency realism objectivity subjectivism structuralism postmodernism and multiculturalism In this sense the book articulates a systematic political philosophy of mind to examine numerous approaches to psychology including indigenous psychology cross cultural psychology activity theory discourse analysis mainstream psychology and evolutionary psychology      *The God Function: Deus Ex Grammatica* Morgan A. Brown, 2017-04-10 What if Theists and Atheists are both objectively wrong What if the Agnostics have completely missed the point THE ARGUMENT FROM GRAMMAR explores the omnipotent and omniscient God that is justified by reason in philosophy and religion Brown demonstrates that we can justify this denotation in grammatical terms by recognizing in Subjects predicate a universally valid Form of knowledge all knowledge and action all power Brown then proceeds to lay out an epistemological foundation for the human sciences drawing upon a philosophical tradition rooted in the thought of Protagoras Kant Schopenhauer and F A Hayek Brown turns his critique of theism back upon the atheists in order to show how grammatical theory can also answer arguments against the God Thesis If THE ARGUMENT FROM GRAMMAR can answer the objections of the Atheists while satisfying the Theists then the future of the

debate over the existence of a rationally justified God shall be a debate over grammar and nothing more **Planet of the Apes as American Myth** Eric Greene,2024-05-15 How do political conflicts shape popular culture This book explores that question by analyzing how the Planet of the Apes films functioned both as entertaining adventures and as apocalyptic political commentary Informative and thought provoking the book demonstrates how this enormously popular series of secular myths used images of racial and ecological crisis to respond to events like the Cold War the race riots of the 1960s the Civil Rights movement the Black Power movement and the Vietnam War The work utilizes interviews with key filmmakers and close readings of the five Apes films and two television series to trace the development of the series theme of racial conflict in the context of the shifting ideologies of race during the sixties and seventies The book also observes that today amid growing concerns over race relations the resurgent popularity of Apes and Twentieth Century Fox s upcoming film may again make Planet of the Apes a pop culture phenomenon that asks who we are and where we are going Instructors considering this book for use in a course may request an examination copy here [Human Brain Evolution](#) Stephen Cunnane,Kathlyn Stewart,2010-06-01 The evolution of the human brain and cognitive ability is one of the central themes of physical biological anthropology This book discusses the emergence of human cognition at a conceptual level describing it as a process of long adaptive stasis interrupted by short periods of cognitive advance These advances were not linear and directed but were acquired indirectly as part of changing human behaviors in other words through the process of exaptation acquisition of a function for which it was not originally selected Based on studies of the modern human brain certain prerequisites were needed for the development of the early brain and associated cognitive advances This book documents the energy and nutrient constraints of the modern brain highlighting the significant role of long chain polyunsaturated fatty acids LC PUFA in brain development and maintenance Crawford provides further emphasis for the role of essential fatty acids in particular DHA in brain development by discussing the evolution of the eye and neural systems This is an ideal book for Graduate students post docs research scientists in Physical Biological Anthropology Human Biology Archaeology Nutrition Cognitive Science Neurosciences It is also an excellent selection for a grad student discussion seminar [The Dietetic and Hygienic Gazette](#) ,1908 [Journal of Reconstructives, Dietetics and Alimentation](#) ,1908 [Marx in Motion](#) Thomas Nail,2020-07-17 Karl Marx is the most historically foundational and systematic critic of capitalism to date and the years since the 2008 financial crisis have witnessed a rebirth of his popular appeal In a world of rising income inequality right wing nationalisms and global climate change people are again looking to the father of modern socialism for answers As this book argues every era since Marx s death has reinvented him to fit its needs There is not one Marx forever and for all time There are a thousand Marxes As Thomas Nail contends one of the most significant contributions of Marx s work is that it treats theory itself as a historical practice Reading Marx is not just an interpretative activity but a creative one As our historical conditions change so do the kinds of questions we pose and the kinds of answers we find in Marx s writing This book is a

return to the writings of Karl Marx including his under appreciated dissertation through the lens of the pressing philosophical and political problems of our time ecological crisis gender inequality colonialism and global mobility However the aim of this book is not to make Marxism relevant by applying it to contemporary issues Instead Marx in Motion the first new materialist interpretation of Marx s work treats Capital as if it were already a response to the present Thomas Nail argues that Marx was a new materialist avant la lettre He argues that Marx did not believe history was determined or that matter was passive or that humans were separate or superior to nature Marx did not even have a labor theory of value Marxists argue that new materialists lack a sufficient political and economic theory and new materialists argue that Marx s materialism is human centric and mechanistic This book aims to solve both problems by proposing a new materialist Marxism

**Biology as Society, Society as Biology: Metaphors** Sabine Maassen, E. Mendelsohn, P. Weingart, 2013-12-01 not lie in the conceptual distinctions but in the perceived functions of metaphors and whether in the concrete case they are judged positive or negative The ongoing debates reflect these concerns quite clearly namely that metaphors are judged on the basis of supposed dangers they pose and opportunities they offer These are the criteria of evaluation that are obviously dependent on the context in which the transfer of meaning occurs Our fundamental concern is indeed the transfer itself its prospects and its limits Looking at possible functions of metaphors is one approach to understanding and elucidating sentiments about them The papers in this volume illustrate by quite different examples three basic functions of metaphors illustrative heuristic and constitutive These functions represent different degrees of transfer of meaning Metaphors are illustrative when they are used primarily as a literary device to increase the power of conviction of an argument for example Although the difference between the illustrative and the heuristic function of metaphors is not great it does exist metaphors are used for heuristic purposes whenever differences of meaning are employed to open new perspectives and to gain new insights In the case of constitutive metaphors they function to actually replace previous meanings by new ones Sabine Maassen in her paper

introduces the distinction between transfer and transformation      Behavioural Diversity in Chimpanzees and Bonobos Christophe Boesch, Gottfried Hohmann, Linda Frances Marchant, 2002-08 Chimpanzees *Pan troglodytes* and bonobos *Pan paniscus* otherwise known as pygmy chimpanzees are the only two species of the genus *Pan*. As they are our nearest relatives there has been much research devoted to investigating the similarities and differences between them. This book offers an extensive review of the most recent observations to come from field studies on the diversity of *Pan* social behaviour with contributions from many of the world's leading experts in this field. A wide range of social behaviours is discussed including tool use, hunting, reproductive strategies and conflict management as well as demographic variables and ecological constraints. In addition to interspecies behavioural diversity, this text describes exciting new research into variations between different populations of the same species. Researchers and students working in the fields of primatology, anthropology and zoology will find this a fascinating read.

**The Archaeology of Human Ancestry** Stephen Shennan, James Steele, 2005-08-15 Human social life is constrained and defined by our cognitive and emotional dispositions which are the legacy of our foraging ancestors. But how difficult is it to reconstruct the social systems and cultural traditions of those ancestors? The Archaeology of Human Ancestry provides a stimulating and provocative answer in which archaeologists and biological anthropologists set out and demonstrate their reconstructive methods. Contributors use observations of primates and modern hunter-gatherers to illuminate the fossil and artefactual records. Thematic treatment covers the evolution of group size, group composition and the emotional structure of social bonds, sexual dimorphism and the sexual division of labour and the origins of human cultural traditions. The Archaeology of Human Ancestry is an essential introduction to the subject for advanced undergraduates and researchers in archaeology and biological anthropology. It will also be used by workers in psychology, sociology and feminist studies as a resource for understanding human social origins.
