The Arithmetic And Spectral Analysis Of Poincare Series Perspectives In Mathematics Volume 13:

The Arithmetic and Spectral Analysis of Poincaré Series James W. Cogdell, Ilya Piatetski-Shapiro, 2014-07-14 The Arithmetic and Spectral Analysis of Poincaré series deals with the spectral properties of Poincaré series and their relation to Kloosterman sums In addition to Poincaré series for an arbitrary Fuchsian group of the first kind the spectral expansion of the Kloosterman Selberg zeta function is analyzed along with the adelic theory of Poincaré series and Kloosterman sums over a global function field This volume is divided into two parts and begins with a discussion on Poincaré series and Kloosterman sums for Fuchsian groups of the first kind A conceptual proof of Kuznetsov's formula and its generalization are presented in terms of the spectral analysis of Poincaré series in the framework of representation theory An analysis of the spectral expansion of the Kloosterman Selberg zeta function is also included The second part develops the adelic theory of Poincaré series and Kloosterman sums over a global function field The main result here is to show that in this context the analogue of the Linnik conjecture can be derived from the Ramanujan conjecture over function fields Whittaker models Kirillov models and Bessel functions are also considered along with the Kloosterman spectral formula convergence and continuation This book will be a valuable resource for students of mathematics

The Conference on L-Functions Lin Weng, Masanobu Kaneko, 2007 This invaluable volume collects papers written by many of the world's top experts on L functions It not only covers a wide range of topics from algebraic and analytic number theories automorphic forms to geometry and mathematical physics but also treats the theory as a whole The contributions reflect the latest most advanced and most important aspects of L functions In particular it contains Hida's lecture notes at the conference and at the Eigenvariety semester in Harvard University and Weng's detailed account of his works on high rank zeta functions and non abelian L functions

Automorphic Forms and L -functions I David Ginzburg, Erez Lapid, David Soudry, 2009 Includes articles that represent global aspects of automorphic forms This book covers topics such as the trace formula functoriality representations of reductive groups over local fields the relative trace formula and periods of automorphic forms Rankin Selberg convolutions and L functions and p -adic L functions

Algebraic and Analytic Methods in Representation Theory, 1996-09-27 This book is a compilation of several works from well recognized figures in the field of Representation Theory The presentation of the topic is unique in offering several different points of view which should make the book very useful to students and experts alike Presents several different points of view on key topics in representation theory from internationally known experts in the field

Barsotti Symposium in Algebraic Geometry Valentino Cristante, William Messing, 2014-07-21 Barsotti Symposium in Algebraic Geometry contains papers corresponding to the lectures given at the 1991 memorial meeting held in Abano Terme in honor of Iacopo Barsotti This text reflects Barsotti's significant contributions in the field This book is composed of 10 chapters and begins with a review of the centers of three dimensional skew algebras The succeeding chapters deal with the theoretical aspects of the Abelian varieties Witt realization of p -Adic Barsotti Tate Groups and

hypergeometric series and functions These topics are followed by discussions of logarithmic spaces and the estimates for and inequalities among A numbers The closing chapter describes the moduli of Abelian varieties in positive characteristic This book will be of value to mathematicians

The Geometry of Algebraic Fermi Curves D Gieseke, 2012-12-02 The Geometry of Algebraic Fermi Curves deals with the geometry of algebraic Fermi curves with emphasis on the inverse spectral problem Topics covered include the periodic Schrödinger operator and electrons in a crystal one dimensional algebraic Bloch varieties separable Bloch varieties and monodromy for separable and generic Bloch varieties Compactification the potential zero and density of states are also discussed This book consists of 13 chapters and begins by recalling the static lattice approximation for electronic motion at low temperature in a pure finite sample of a d dimensional crystal The position of the Fermi energy and the geometry of the Fermi hypersurface in relation to the metallic properties of the crystal are described The following chapters focus on the Bloch variety associated with a discrete two dimensional periodic Schrödinger operator algebraic Bloch varieties in one dimension compactification of the Bloch variety and the potential zero The geometry of the Bloch variety of a separable potential is also considered along with the topology of the family of Fermi curves The final chapter demonstrates how the Bloch variety is determined by the density of states This monograph will be a useful resource for students and teachers of mathematics

Theory of Fundamental Bessel Functions of High Rank Zhi Qi, 2021-02-10 In this article the author studies fundamental Bessel functions for $\mathrm{GL}_n(\mathbb{F})$ arising from the Vorono summation formula for any rank n and field $\mathbb{F} = \mathbb{R}$ or \mathbb{C} with focus on developing their analytic and asymptotic theory The main implements and subjects of this study of fundamental Bessel functions are their formal integral representations and Bessel differential equations The author proves the asymptotic formulae for fundamental Bessel functions and explicit connection formulae for the Bessel differential equations

Selected Works of Ilya Piatetski-Shapiro Il'ya Iosifovich Piatetski-Shapiro, 2000 Piatetski-Shapiro himself with the consultation of the editors selected these 162 papers some of which appear in English for the first time Together they represent almost 50 years of his service to mathematics and though arranged by subject are nearly in chronological order Each of the sections conclude with commentary on the entire work of Piatetski-Shapiro's in that area including related developments Following his autobiographical Etude on life and automorphic forms in the Soviet Union sections cover early papers in harmonic analysis and number theory automorphic functions and discrete groups bounded homogeneous domains applied mathematics algebraic geometry automorphic L functions and theta lifts and applications to generalized Ramanujan conjectures Books and long papers have been excluded No index Annotation copyrighted by Book News Inc Portland OR

[Selected Works of Ilya Piatetski-Shapiro](#) James Cogdell, Simon Gindikin, Peter Sarnak, 2022-11-03 This selection of papers of I Piatetski-Shapiro represents almost 50 years of his mathematical activity Included are many of his major papers in harmonic analysis number theory discrete groups bounded homogeneous domains algebraic geometry automorphic forms and automorphic L functions The papers in the volume are intended as a

representative and accurate reflection of both the breadth and depth of Piatetski Shapiro's work in mathematics. Some of his early works such as those on the prime number theorem and on sets of uniqueness for trigonometric series appear for the first time in English. Also included are several commentaries by his close colleagues. This volume offers an elegant representation of the contributions made by this renowned mathematician. Causal Symmetric Spaces Gestur Olafsson, Joachim Hilgert, 1996-09-11. This book is intended to introduce researchers and graduate students to the concepts of causal symmetric spaces. To date, results of recent studies considered standard by specialists have not been widely published. This book seeks to bring this information to students and researchers in geometry and analysis on causal symmetric spaces. Includes the newest results in harmonic analysis including Spherical functions on ordered symmetric space and the holomorphic discrete series and Hardy spaces on compactly causal symmetric spaces. Deals with the infinitesimal situation, coverings of symmetric spaces, classification of causal symmetric pairs and invariant cone fields. Presents basic geometric properties of semi-simple symmetric spaces. Includes appendices on Lie algebras and Lie groups. Bounded symmetric domains, Cayley transforms, Antiholomorphic Involutions on Bounded Domains and Para Hermitian Symmetric Spaces. New Technical Books New York Public Library, 1991. An Introduction to the Langlands Program Joseph Bernstein, Stephen Gelbart, 2013-12-11. For the past several decades, the theory of automorphic forms has become a major focal point of development in number theory and algebraic geometry with applications in many diverse areas including combinatorics and mathematical physics. The twelve chapters of this monograph present a broad user-friendly introduction to the Langlands program, that is, the theory of automorphic forms and its connection with the theory of L-functions and other fields of mathematics. Covered are a variety of areas in number theory from the classical zeta function up to the Langlands program. The exposition is systematic, with each chapter focusing on a particular topic devoted to special cases of the program and accessible to graduate students and researchers in the field. **Mathematical Reviews**, 2003. **American Book Publishing Record**, 2006. **Subject Guide to Books in Print**, 1993. **Astrophysics through Computation** Brian Koberlein, David Meisel, 2013-06-28.
