The Paradox Of Self Consciousness:

The Paradox of Self-consciousness José Luis Bermúdez, 2000 In this book Jos Luis Berm dez addresses two fundamental problems in the philosophy and psychology of self consciousness 1 Can we provide a noncircular account of fully fledged self conscious thought and language in terms of more fundamental capacities 2 Can we explain how fully fledged self conscious thought and language can arise in the normal course of human development Berm dez argues that a paradox the paradox of self consciousness arises from the apparent strict interdependence between self conscious thought and linguistic self reference The paradox renders circular all theories that define self consciousness in terms of linguistic mastery of the first person pronoun It seems to follow from the paradox of self consciousness that no such account or explanation can be given Drawing on recent work in empirical psychology and philosophy the author argues that any explanation of fully fledged self consciousness that answers these two questions requires attention to primitive forms of self consciousness that are prelinguistic and preconceptual Such primitive forms of self consciousness are to be found in somatic proprioception the structure of exteroceptive perception and prelinguistic forms of social interaction The author uses these primitive forms of self consciousness to dissolve the paradox of self consciousness and to show how the two questions can be given an affirmative answer

Hegel's Phenomenology of Self-Consciousness Leo Rauch, David Sherman, 1999-05-27 Offering a new translation of the famous chapter IV Self Consciousness of Phenomenology of Spirit this book reflects the far reaching insights of contemporary Hegelian scholarship Included is extensive commentary as well as a review of its reception by such important twentieth century thinkers as Kojève Heidegger Sartre Gadamer Bataille Deleuze Lacan and Habermas Interest in Hegel has historically centered around the Phenomenology of Spirit In particular chapter IV including Hegel's celebrated master slave dialectic has influenced philosophers political theorists social psychologists cultural anthropologists and literary theorists alike Hegel began this chapter with an influential discussion of the nature of human desire and then described a hypothetical encounter between two pre social human beings who engage in a life and death struggle for recognition Out of this struggle that gave rise to self identity emerged such forms of consciousness as master and slave stoicism skepticism and what Hegel referred to as the unhappy consciousness which he took to be paradigmatic of early Christianity These forms of consciousness in turn are transcended by other more comprehensive forms of consciousness that ultimately come to reflect the highest elaborations of societal life The impetus for these dynamic changes comes from the dialectical contradictions that inhere within our most basic conceptions of personhood

The Bodily Self Jose Luis Bermudez, 2024-02-06 Essays on the role of the body in self consciousness showing that full fledged linguistic self consciousness is built on a rich foundation of primitive nonconceptual self consciousness These essays explore how the rich and sophisticated forms of self consciousness with which we are most familiar as philosophers psychologists and as ordinary reflective individuals depend on a complex underpinning that has been largely invisible to students of the self and self consciousness Jos Luis Berm dez extending the

insights of his groundbreaking 1998 book *The Paradox of Self Consciousness* argues that full fledged linguistic self consciousness is built on a rich foundation of primitive nonconceptual self consciousness and that these more primitive forms of self consciousness persist in ways that frame self conscious thought They extend throughout the animal kingdom and some are present in newborn human infants Berm dez makes the case that these primitive forms of self awareness can indeed be described as forms of self consciousness arguing that they share certain structural and epistemological features with full fledged linguistic self consciousness He offers accounts of certain important classes of states of nonconceptual content including the self specifying dimension of visual perception and the content of bodily awareness considering how they represent the self And he explores the general role of nonconceptual self consciousness in our cognitive and affective lives examining in several essays the relation between nonconceptual awareness of our bodies and what has been called our sense of ownership for our own bodies

The Self-Aware Universe Amit Goswami,1995-03-21 In this stimulating and timely book Amit Goswami PhD shatters the widely popular belief held by Western science that matter is the primary stuff of creation and proposes instead that consciousness is the true foundation of all we know and perceive His explanation of quantum physics for lay readers called a model of clarity by Kirkus Reviews sets the stage for a voyage of discovery through the common ground of science and religion the entwined nature of mind and body and our interconnectedness with all of creation

Between Kant and Hegel Dieter Henrich,2009-07-01 Dieter Henrich s lectures on German idealism were the first contact a major German philosopher had made with an American audience since the onset of World War II They remain one of the most eloquent interpretations of the central philosophical tradition of Germany and the way in which it relates to the concerns of contemporary philosophy

Belief, Inference, and the Self-Conscious Mind Eric Marcus,2021 It is impossible to hold contradictory beliefs in mind together at once Eric Marcus examines the nature of belief and inference in light of the phenomenon of rational necessity to reveal how the unity of the rational mind is a function of our knowledge of ourselves as bound to believe the true

A Philosophy of Person and Identity Monica Meijsing,2022-08-04 This book discusses the themes of personhood and personal identity It argues that while there is a metaphysical answer to the question of personal identity there is no metaphysical answer to the question of what constitutes a person The author argues against both body mind dualism and physicalism and also against the idea that there is some metaphysically real category of persons distinct from the category of human beings or human organisms Instead the author presents neutral monist autopoietic enactivist kind of metaphysics of the human being and a relational and completely human dependent notion of a person The tools used in these arguments include conceptual argumentation and empirical case studies Using both personal experiences and

studies of cultures all over the world the author examines dualism between mind and body The author discusses real people who seem to live a Cartesian life as somehow disembodied minds as well as the concept of the person The author uses the concluding chapters to present their own views arguing that questions about our identity should be separated from questions of our personhood as well as the concept of personhood This volume is of interest to scholars of philosophy of mind

The Spirit of Modern Philosophy Josiah Royce, 1892

We as Self Hye Young Kim, 2021-01-28 We as Self argues for a notion of we ness based not on a self centered or a self less point of view in which the we is only either a collection of individuals or an anonymous whole but on relation This relation is pre subjective meaning that the conscious reflective subjective self is not the conceptual basis of the relation The irreducible metaphysical distinction between self and other is always there but the awareness of it is not prior to this relation which is an ontological pre condition of self Hye Young Kim demonstrates that the distinction and unity of self and other in this relation can be comprehended spatially by applying knot logic The author analyzes certain linguistic practices in Korean to show one representation of pre subjective we ness in language but not in an ethnographical manner By doing so the author criticizes and challenges the Eurocentric tendency of philosophy and contributes to efforts to expand diversity in philosophy

Sartre and his Predecessors William Ralph Schroeder, 2019-04-15 This study first published in 1984 presents an explanation and critical examination of the theories of Sartre Heidegger Husserl and Hegel on the fundamental relationships between persons It also synthesizes the results into a new conception of one s relation to other people Sartre s famous discussion of the Look in his early treatise Being and Nothingness is the point of departure and central text Since Sartre critically responds to his three famous predecessors these thinkers are given an independent hearing The book demonstrates various ways in which persons are internally related to one another shows that one s access to other people typically does not compare unfavourably with one s access to oneself and establishes the importance of a prior comprehension of the status of other people for an adequate treatment of knowing them

Sculpting the Self Muhammad Umar Faruque, 2021-08-17 Sculpting the Self addresses what it means to be human in a secular post Enlightenment world by exploring notions of self and subjectivity in Islamic and non Islamic philosophical and mystical thought Weaving together insights from several disciplines such as religious studies philosophy anthropology critical theory and neuroscience and arguing against views that narrowly restrict the self to a set of cognitive functions and abilities this study proposes a multidimensional account of the self that offers new options for addressing central issues in the contemporary world including spirituality human flourishing and meaning to life

Thinking Difference with Heidegger and Levinas Rozemund Uljée, 2020-06-01 Tracing the relationship between truth and justice as articulated by Heidegger and Levinas Rozemund Ulj e presents the relation between the two thinkers as a subtle profound and complex rapport which includes both their proximity and radical difference This rapport is conceived not as a confrontation but rather as a transformation as Levinas s notion of justice does not renounce Heidegger s account of truth and its deployment

Thinking Difference with Heidegger and Levinas shows how the ethical relation transforms the essence and task of philosophy in its entirety since it shifts the orientation of philosophy and the task of thinking from its concern with truth as ground or foundation to a question of justice. As a result philosophy is no longer riveted to Being and its truth but answers to the call for justice and must be conceived of as infinite commencement where its impossibility to totalize meaning ensures that it remains open to the alterity of transcendence.

Self-consciousness Sebastian Rödl, 2007. Rödl's thesis is that self knowledge is not empirical it does not spring from sensory affection. Rather self knowledge is knowledge from spontaneity its object and its source are the subject's own activity in the primary instance its acts of thinking both theoretical and practical thinking belief and action.

Inner Experiences: Theory, Measurement, Frequency, Content, and Functions Alain Morin, Thomas M. Brinthaup, Jason D. Runyan, 2016-02-26

One fundamental topic of scientific inquiry in psychology is the study of what William James called the stream of consciousness: our ongoing experience of the world and ourselves from within our inner experiences. These internal states aka stimulus independent thoughts include inner speech, mental imagery, feelings, sensory awareness, internally produced sounds or music, unsymbolized thinking and mentalizing, thinking about others, mental states. They may occur automatically during mind wandering, daydreaming and resting state episodes and may focus on one's past, present or future, mental time travel e.g. auto-narrative consciousness. Inner experiences also may take the form of intrusive or ruminative thoughts. The types, characteristics, frequency, content and functions of inner experiences have been studied using a variety of traditional methods among which questionnaires, thought listing procedures i.e. open ended self-reports, thinking aloud techniques and daily dairies. Another approach, articulatory suppression, consists in blocking participants' use of verbal thinking while completing a given task. Deficits indicate that inner speech plays a causal role in normal task completion. Various thought sampling approaches have also been developed in an effort to gather more ecologically valid data. Previous thought sampling studies have relied on beepers that signal participants to report aspects of their inner experiences at random intervals. More recent studies are exploiting smartphone technology to easily and reliably probe randomly occurring inner experiences in large samples of participants. These various measures have allowed researchers to learn some fundamental facts about inner experiences. To illustrate, it is becoming increasingly clear that prospection (future oriented thinking) greatly depends on access to autobiographical memory (past oriented thinking) where recollection of past scenes is used as a template to formulate plausible future scenarios. The main goal of the present Research Topic was to offer a scientific platform for the dissemination of current high quality research pertaining to inner experiences. Although data on all forms of inner experiences were welcome, reports on recent advances in inner speech research were particularly encouraged.

Here are some examples of topics of interest 1 description and validation of new scales inventories questionnaires measuring any form of inner experience 2 novel uses or improvements of existing measures of inner experiences 3 development of new smartphone technology facilitating or broadening the use of cell phones to sample inner experiences 4 frequency content and functions of various inner experience 5 correlations between personality or cognitive variables and any aspects of inner experiences 6 philosophical or theoretical considerations pertaining to inner experiences and 7 inner experience changes with age

Matters of Spirit F. Scott Scribner, 2015-10-13 This book offers a radically new interpretation of the entire philosophy of J G Fichte by showing the impact of nineteenth century psychological techniques and technologies on the formation of his theory of the imagination the very centerpiece of his philosophical system By situating Fichte s philosophy within the context of nineteenth century German science and culture the book establishes a new genealogy one that shows the extent to which German idealism s transcendental account of the social remains dependent upon the scientific origins of psychoanalysis in the material techniques of Mesmerism The book makes it clear that the rational transcendental account of spirit imagination and the social has its source in the psychological phenomena of affective rapport Specifically the imagination undergoes a double displacement in which it is ultimately subject to external influence the influence of a material technique or in short a technology

The Self in Neuroscience and Psychiatry Tilo Kircher, Anthony S. David, 2003-08-07 In recent years the clinical and cognitive sciences and neuroscience have contributed important insights to understanding the self The neuroscientific study of the self and self consciousness is in its infancy in terms of established models available data and even vocabulary However there are neuropsychiatric conditions such as schizophrenia in which the self becomes disordered and this aspect can be studied against healthy controls through experiment building cognitive models of how the mind works and imaging brain states In this 2003 book the first to address the scientific contribution to an understanding of the self an eminent international team focuses on current models of self consciousness from the neurosciences and psychiatry These are set against introductory essays describing the philosophical historical and psychological approaches making this a uniquely inclusive overview It will appeal to a wide audience of scientists clinicians and scholars concerned with the phenomenology and psychopathology of the self
