Rhetorical Code Studies Kevin Brock, 2019-03-18 Winner of the 2017 Sweetland Digital Rhetoric Collaborative Book Prize Software developers work rhetorically to make meaning through the code they write In some ways writing code is like any other form of communication in others it proves to be new exciting and unique In *Rhetorical Code Studies* Kevin Brock explores how software code serves as meaningful communication through which software developers construct arguments that are made up of logical procedures and express both implicit and explicit claims as to how a given program operates Building on current scholarly work in digital rhetoric software studies and technical communication Brock connects and continues ongoing conversations among rhetoricians technical communicators software studies scholars and programming practitioners to demonstrate how

software code and its surrounding discourse are highly rhetorical forms of communication. He considers examples ranging from large well known projects like Mozilla Firefox to small scale programs like the FizzBuzz test common in many programming job interviews. Undertaking specific examinations of code texts as well as the contexts surrounding their composition, Brock illuminates the variety and depth of rhetorical activity taking place in and around code from individual differences in style to changes in large scale organizational and community norms. Rhetorical Code Studies holds significant implications for digital communication, multimodal composition and the cultural analysis of software and its creation. Mechanisms Matthew G. Kirschenbaum, 2012-01-06. A new textual studies and archival approach to the investigation of works of new media and electronic literature that applies techniques of computer forensics to conduct media specific readings of William Gibson's electronic poem *Agrippa*, Michael Joyce's *Afternoon* and the interactive game *Mystery House*. In *Mechanisms*, Matthew Kirschenbaum examines new media and electronic writing against the textual and technological primitives that govern writing, inscription and textual transmission in all media: erasure, variability, repeatability and survivability. *Mechanisms* is the first book in its field to devote significant attention to storage, the hard drive in particular, arguing that understanding the affordances of storage devices is essential to understanding new media. Drawing a distinction between forensic materiality and formal materiality, Kirschenbaum uses applied computer forensics techniques in his study of new media works. Just as the humanities discipline of textual studies examines books as physical objects and traces different variants of texts, computer forensics encourage us to perceive new media in terms of specific versions, platforms, systems and devices. Kirschenbaum demonstrates these techniques in media specific readings of three landmark works of new media and electronic literature, all from the formative era of personal computing: the interactive fiction game *Mystery House*, Michael Joyce's *Afternoon*, A Story and William Gibson's electronic poem *Agrippa*.

This book tries to identify what is wrong, why there are things to fix and some human factors principles to keep in
