Fragmented Nature: Medieval Latinate Reasoning on the Natural World and Its Order Mattia Cipriani,Nicola Polloni,2022-06-09 The Latin Middle Ages were characterised by a vast array of different representations of nature These conceptualisations of the natural world were developed according to the specific requirements of many different disciplines with the consequent result of producing a fragmentation of images of nature Despite this plurality two main tendencies emerged On the one hand the natural world was seen as a reflection of God s perfection teleologically ordered and structurally harmonious On the other it was also considered as a degraded version of the spiritual realm a world of impeccable ideas separate substances and celestial movers This book focuses on this tension between order and randomness and idealisation and reality of nature in the Middle Ages It provides a cutting edge profile of the doctrinal and semantic richness of the medieval idea of nature and also illustrates the structural interconnection among learned and scientific disciplines in the medieval period stressing the fundamental bond linking together science and philosophy on the one hand and philosophy and theology on the other This book will appeal to scholars and students alike interested in Medieval European History Theology Philosophy and Science
