The Antigens Volume Iv:

The Antigens Michael Sela, 2014-05-10 The Antigens Volume IV is a comprehensive treatise covering all aspects of antigens including their chemistry and biology as well as their immunologic role and expression Topics covered range from the immune reactions of lipids and lipid model membranes to the immunology of antibiotics and protective antigens of bacteria Antigens of pathogenic fungi are also explored along with adjuvants and antigenic competition Comprised of seven chapters this volume begins with a review of lipids as antigens followed by a discussion on the immunological aspects of antibiotics The next two chapters are concerned with more complex antigens namely bacteria and fungi as well as the relationship between immunity and infection The last three chapters deal with three important areas of immunology antigenic competition adjuvants and lectins In particular the chemistry of lectins and their application to immunology are examined This monograph will be of interest to practitioners and researchers in immunology experimental and clinical medicine biochemistry and other disciplines *Handbook of Nonmedical Applications of Liposomes, Vol IV From Gene Delivery and Diagnosis to Ecology* Danilo D. Lasic, Yechezkel Barenholz, 1996-01-09 Liposomes have become an important model in fundamental biomembrane research including biophysical biochemical and cell biological studies of membranes and cell function They are thoroughly studied in applications such as drug delivery systems in medical applications and as controlled release systems microencapsulating media signal carriers support matrices and solubilizers in other applications While medical applications have been extensively reviewed in recent literature there is a need for easily accessible information on applications for liposomes beyond pharmacology and medicine **Volume 4 Immunopathology** Noel Rose, 2013-06-29 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and bio medical scientists in general who are interested in the intricate system of cells and molecular moieties derived from these cells which constitute the RES It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system Nevertheless because of historical developments and current interest in the subject by investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology biochemistry phylogeny and ontogeny physiology and pharmacology as well as clinical areas including immunopathology cancer infectious diseases allergy and hypersensitivity It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines The treatise editors and their editorial board consisting predominantly of the editors of individual volumes are extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community in general and especially by members of the American as well as European and Japanese
