Structural Biology for Virus Research Akio Adachi, Yasuyuki Miyazaki, Masako Nomaguchi, Mikako Fujita, Viruses are absolutely and strictly dependent on target host cells for their replication However they have their own unique strategies at each replication step from the entry into cells transcription translation assembly of viral genome proteins and up to the release of progeny virions from cells We virologists have to understand these complex biological interactions between viruses and host cells Importantly extensive studies based on bio structural technology have revealed in succession the detailed and bottom line mechanisms of viral replication processes otherwise impossible We now know the highly dynamic nature of viral genome proteins and are impressed by their ingeniously organized functionality in hostile host environments For characterization of viruses as a unique genetic entity and pathogenic agent it has been critical to investigate thoroughly the individual viral components and host factors involved in the virus replication cycle Because many viral and cellular factors essential for viral replication and pathogenicity have been newly discovered through the efforts of virologists the necessity of contribution to the progress of virology by the structural biology is now greatly increasing To fully understand precise mechanisms underlying the functional interaction of viral and host molecules needless to say it is crucially required to have their structural information We need to know molecular details of the nucleic acids proteins and interacting molecules The information indispensable for understanding certain biological phenomena may only be provided by high resolution three dimensional structures Of note a number of anti viral drugs have been generated based on the structural information The interacting interfaces between virus and host components which are important for viral replication can be potent targets for anti viral drugs Their structural characterization would lead to designing rigid anti viral drugs and or vaccines In this Research Topic we wish to summarize and review what the structural biology has accomplished so far to resolve the important virological issues We also wish to describe the perspective of the structural biology for the future virology Finally the presentation of ongoing original works is greatly encouraged
