Advanced Age Geriatric Care Nages Nagaratnam, Kujan Nagaratnam, Gary Cheuk, 2018-11-26 As the Baby Boomers age concerns over healthcare systems abilities to accommodate geriatric patients grow increasingly challenging This is especially true with the population deemed to be the oldest of the old specifically those over the age of 85 Unlike any other time in history this demographic is the fastest growing segment of most developed countries In the United

States the oldest old is projected to double from 4.3 million to 9.6 million by 2030. The increased life expectancy of the population since the early 1900s has been built on the improvement of living conditions, diet, public health, and advancement in medical care. With this, we have seen a steady decline in the age-specific prevalence of vascular and heart diseases, stroke, and even dementia. Older persons are healthier today than their counterparts decades ago. More importantly than in any other age group, the care of the oldest old must be individualized; management decisions should be made taking into consideration the older persons' expressed wishes, quality of life, function, and mental capacity. The inevitable consequence is that there will be an increase in the prevalence of older persons with chronic diseases, multiple co-existing pathologies, and neurodegenerative diseases. The oldest of the aging population are often excluded from drug trials, and their treatments are largely based on findings extrapolated from that of the younger old. Furthermore, among the oldest old, physiologically they are more diverse than other segments of the population. Their demographic characteristics are unparalleled and different compared to that of the younger old. Several studies have drawn attention to the differing attitudes among health professionals towards elderly people, and many show prejudice because they are old. As a result, the use of age as a criteria in determining the appropriateness of treatment is of very limited validity, yet there are limited resources that guide physicians through these challenges. This book creates a greater awareness of these challenges and offers practical guidelines for working within the infrastructures vital to this demographic. This book is designed for geriatricians, primary care physicians, junior medical officers, specialty geriatrics nurses, and gerontologists. It is divided into 3 sections: General Considerations, Chronic diseases, and Geriatric Syndromes. Each chapter provides a summary of important and essential information under the heading of Key Points. Case studies are included in some of the chapters to highlight the principles of management.

Stroke and Stroke Related Disorders in the Elderly Kujan Nagarathnam, Nages Nagarathnam, 2013-04-24. The incidence of stroke increases with age, and with the increase in life expectancy, the older people will contribute to a large portion of those afflicted with stroke. *Stroke and Stroke related disorders in the Elderly* begins with a historical review of stroke and its management, followed by an overview of the anatomy and functions of the brain. Detailed knowledge of which is mandatory and essential for the proper understanding of what happens to a patient with a stroke and for interpretation of x-ray images of the brain. It then considers the pathophysiology as our knowledge of neuronal death continues to evolve. Clinical manifestations, the evaluation, and management are then dealt with in full. Stroke-related disorders such as transient ischaemic attack and carotid artery disease are included. The book also provides essential information on poststroke neuropsychiatric and neurobehavioural disorders and poststroke complications such as cognitive impairment, falls, seizures, urinary incontinence, and central stroke pain that may hinder or delay stroke recovery. Many sections follow a common pattern with headings and subheadings. The text offers the primary care physician, junior hospital doctors, medical undergraduates, and specialist nurses a systematic approach to stroke in the elderly. The intent also is to provide extreme

information where interest demands in those areas extending the aims and scope of the book to pathology and pharmacology and beyond
