Training for Performance John Matthews, 2011-06-01 Training for Performance is the first work of its kind not in the sense that it addresses training for performance but in that it invites a critical questioning of the imperatives and the rhetoric which govern academic and practical concerns for training alike. Dr Martin Welton, Queen Mary University of London

Training for Performance: A Meta-disciplinary Account is an innovative contribution to the field of work on contemporary actor and performer training. John Matthews introduces the concept of askeology, a field of study that dissolves divisions between disciplines and their exercises and identifies four meta-disciplinary categories in the process of training that are common to all institutional contexts: Vocation, Obedience, Formation and Automatisations. Through the exploration of contrasting accounts of training and the differing cultural politics within which they operate, Matthews provides a highly original and comprehensive approach to defining one of the most frequently used terms in theatre and performance studies. Training for Performance encourages performers to think afresh about how they understand and engage in their training and is an invaluable resource for any actor, student or professional interested in the process of performance.

*Handbook of Neurologic Music Therapy* Michael H. Thaut, Volker Hömberg, 2025-02-22 Neurologic Music Therapy (NMT) is a form of music therapy developed for people suffering from cognitive sensory or motor dysfunctions arising from neurological diseases of the nervous system. People who can benefit from this therapy include sufferers from stroke, traumatic brain injury, Parkinson's and Huntington's disease, cerebral palsy, Alzheimer's disease, autism and other neurological diseases affecting cognition, movement and communication e.g. MS, Muscular Dystrophy etc. The Handbook of Neurologic Music Therapy is a comprehensive landmark text presenting a new and revolutionary model of music in rehabilitation therapy and medicine that is scientifically validated and clinically tested. It presents a field that is practiced by over 4000 NMT-certified clinicians in over 70 countries. In this second edition, the book is fully updated and revised with new research updates in the field and extends the original clinical chapter content.

**New approaches for central nervous system rehabilitation** Pawel Kiper, Agnieszka Guzik, Maurizio Petrarca, Angel Oliva-Pascual-Vaca, Carlos Luque-Moreno, 2024-02-09 Neurorehabilitation is a complex and growing field of motor rehabilitation. It is specifically directed to apply restorative techniques to stimulate neural plasticity of the central nervous system (CNS). Considering that neuroplasticity is maintained for the whole human life

and can be stimulated through specific learning or exposure to enriched environments we can hypothesize that applying specific treatments can be beneficial for people with CNS injury Because the plateau of neuroplasticity can be observed after about 12 weeks from stroke onset it is vital to capitalize on this high level of brain reorganization by providing well timed and well designed treatments Here we can distinguish a wide range of approaches developed for CNS recovery in acute subacute or chronic stage of injury These approaches comprise priming or augmentation techniques including innovative technologies like end effector robots exoskeletons or virtual reality Many of them have been confirmed as effective but so far in clinical practice we can still experience a lack of specific indications i e which therapy for how long time and for which patient s impairment can be applied
