physiatrists as well as other members of the rehabilitation team Covers the complete spectrum of stroke rehabilitation from aphasia to limb impairment to pain syndromes to facilitate the best outcomes and highest quality of life for your patients Discusses prevention predictors of recovery medication management depression and psychological issues and return to work and driving Includes coverage of robotic technology brain stimulation community based rehabilitation and children and Stroke Rehabilitation Leeanne M. Carey, 2012-06-28 Stroke Rehabilitation Insights from Neuroscience and stroke Imaging informs and challenges neurologists rehabilitation therapists imagers and stroke specialists to adopt more restorative and scientific approaches to stroke rehabilitation based on new evidence from neuroscience and neuroimaging literatures The fields of cognitive neuroscience and neuroimaging are advancing rapidly and providing new insights into human behavior and learning Similarly improved knowledge of how the brain processes information after injury and recovers over time is providing new perspectives on what can be achieved through rehabilitation Stroke Rehabilitation explores the potential to shape and maximize neural plastic changes in the brain after stroke from a multimodal perspective Active skill based learning is identified as a central element of a restorative approach to rehabilitation. The evidence behind core learning principles as well as specific learning strategies that have been applied to retrain lost functions of movement sensation cognition and language are also discussed Current interventions are evaluated relative to this knowledge base and examples are given of how active learning principles have been successfully applied in specific interventions. The benefits and evidence behind enriched environments is reviewed with examples of potential application in stroke rehabilitation The capacity of adjunctive therapies such as transcranial magnetic stimulation to modulate receptivity of the damaged brain to benefit from behavioral interventions is also discussed in the context of this multimodal approach Focusing on new insights from neuroscience and imaging the book explores the potential to tailor interventions to the individual based on viable brain networks Stroke Rehabilitation E-Book Glen Gillen, Dawn M. Nilsen, 2020-09-13 NEW Revised and expanded content keeps you up to date on the latest information in all areas of stroke rehabilitation NEW Updated references reflect the changes that have been made in the field NEW Assessment Appendix and Pharmacological Appendix UPDATED Resources for Educators and Students on Evolve Occupational Therapy for Stroke Rehabilitation Simon B. N. Thompson, Maryanne Morgan, 2013-12-20 This book is both an introductory text to the rehabilitation of stroke for student therapists and a reference text for qualified therapists The layout of the book reflects these needs with Chapters 1 4 assuming a minimal level of understanding of the material These chapters provide an introduction to the condition of stroke itself the problem therapists face in assessing and treating stroke patients and therapeutic approaches in occu pational therapy Prognosis of stroke is also discussed which is an issue taken up in later chapters concerned with expert systems The use of microcomputers in occupational therapy is discussed throughout the book with particular reference to their direct role during therapy Chapters 5 7 assume a higher level of understand ing from the reader although students will find the material useful as an insight into the work of the modern day therapist Chapter 5 addresses the work carried out in the area of biofeedback Chapter 6 introduces the concept and uses of databases and Chapter 7 discusses the versatility of microcomputers especially in the provision of expert systems for the prognosis of stroke **Evidence-based** Rehabilitation Mary C. Argye E. Hillis, Jean-Claude information Baron, 2015-07-23 The ischemic penumbra was initially defined by Symon Lassen and colleagues in the 1970s as an area of brain tissue with inadequate blood flow to maintain electric activity of neurons but adequate blood flow to preserve the function of the ion channels This area of tissue receiving enough blood to survive but not enough to function often surrounds or abuts the irreversibly damaged core in ischemic stroke It was shown that if blood flow could be restored to this area of marginal perfusion the tissue could survive and function again and growth of the core could be prevented Based on seminal PET studies penumbra or penumbral tissue eventually took on a subtly different meaning the area of brain that is destined to progress to infarct unless blood flow is restored within a particular time window. The penumbra thus became the target for all acute stroke interventions to preserve viability of the tissue and restore function New imaging techniques including diffusion and perfusion MRI and CT perfusion were developed to rapidly identify individuals with penumbra who were thought to be the best candidates for aggressive interventions to restore blood flow particularly beyond the licensed time window for IV thrombolysis However most clinical trials have failed to establish the usefulness of identifying candidates for treatment in this way using pre specified protocols and primary endpoints These trials have used different and sometimes unvalidated thresholds of hypoperfusion as well as irreversible infarct and various definitions of significant penumbra or mismatch

between irreversible infarct and hypoperfused but salvageable tissue and reanalysis of their data using more refined image processing showed post hoc positivity They have also evaluated outcome in a variety of ways with few studies measuring the direct effect of restoring blood flow on the function of the penumbral tissue Therefore important remaining questions include how to define characterize and image the penumbra in acute stroke to achieve the greatest reliability and validity for what we want to measure and whether this concept so defined provides an optimal target for stroke therapy using state of the art Cell-based Therapies for Stroke: Promising Solution or Dead End?
