Structural Economics Faye Duchin, 1998 In all societies the main causes of environmental degradation are resource extraction and the generation of wastes by households and industries Realistic strategies for mitigating these impacts require an understanding of both the technologies by which resources are transformed into products and the lifestyle choices that shape household use of such products Structural Economics provides a framework for developing and evaluating such strategies It represents an important new approach to describing household lifestyles and technological choices the relationships between them and their impact on resource use and waste In this volume economist Faye Duchin provides for the first time an authoritative and comprehensive introduction to the field including its social as well as its technological dimensions The presentation is accessible to non specialists while also including a substantial amount of new research Duchin's primary achievement is to integrate a qualitatively rich understanding of technologies and lifestyles into a flexible quantitative framework grounded in established principles of input output economics and social accounting She uses tools and insights from areas as diverse as demography and market research to conceptualize and describe different categories of households and their lifestyles She also draws on the expertise of engineers and physical scientists to examine the potential for technological change The framework Duchin develops permits the rigorous and detailed analysis of specific scenarios for alternative technologies and changes in lifestyle The author uses the case of Indonesia for illustration and to refine new concepts by testing their relevance against factual information The new field of structural economics represents an important step forward in the effort to apply the power of science to solving the problems of modern societies This book should prove invaluable to students and scholars of economics sociology or anthropology as well as environmental scientists policymakers at all levels and anyone concerned with a practical interpretation of the elusive concept of sustainable development

Structural Transformation of Bangladesh Economy Mustafa K. Mujeri, Neaz Mujeri, 2021-03-18 This book examines the theory and global evidence on structural transformation along with stylised facts and implications using among others a dynamic panel model for South Asia The characteristics of the structural transformation process in Bangladesh bring out the relevance of a comprehensive and inclusive South Asian brand in view of the challenges of large population size high burden of poverty rising inequalities and its compulsion to achieve rapid and sustained inclusive development The analysis highlights several distinct characteristics of Bangladesh's structural transformation including changes in value added trade employment productivity formal informal jobs and opportunities for low skilled workers The book suggests that the manufacturing sector could not create the required number of jobs and generate rapid absolute and relative productivity gains in the Bangladesh

economy Although the services sector has largely led output and employment growth services subsectors with strong labour absorptive capacity have low average productivity Hence growth enhancing structural transformation led by these subsectors is likely to be less dynamic than required for rapid employment creating growth in the economy The book s analysis on COVID 19 and cyclone Amphan shows that an integrated disaster and development paradigm is needed for Bangladesh An inclusive and health and well being focused structural transformation presents the pathway to advance the people centred approach to development in Bangladesh through both vulnerability reduction and investments in sustainable development that would offset both known and unknown disaster threats The key for Bangladesh is to skillfully manage the developer s dilemma of achieving both structural transformation in terms of large productivity gains and inclusive growth for reducing poverty and rising inequalities This book is relevant to students academicians and development practitioners and others interested in contemporary development *Structural Transformation and Economic Development* Banji

The Oxford Handbook of Africa and Economics Célestin Monga, Justin Yifu Lin, 2015-07-02 A popular myth about the travails of Africa holds that the continent's long history of poor economic performance reflects the inability of its leaders and policymakers to fulfill the long list of preconditions to be met before sustained growth can be achieved. These conditions are said to vary from the necessary quantity and quality of physical and human capital to the appropriate institutions and business environments. While intellectually charming and often elegantly formulated, that conventional wisdom is actually contradicted by historical evidence and common sense. It also suggests a form of intellectual mimicry that posits a unique path to prosperity for all countries regardless of their level of development and economic structure. In fact, the argument underlining that reasoning is tautological and the policy prescriptions derived from it are fatally teleological. Low income countries are by definition those where such ingredients are missing. None of today's high income countries started its growth process with the required and complete list of growth ingredients. Unless one truly believes that the continent of Africa and most developing countries are ruled predominantly if not exclusively by plutocrats with a high propensity for sadomasochism, the conventional view must be re-examined, debated, and questioned. This volume, the second of the Oxford Handbook of Africa and Economics, reassesses the economic policies and practices observed across the continent since independence. It offers a collection of analyses by some of the leading economists and development thinkers of our time and reflects a wide range of perspectives and viewpoints. Africa's emergence as a potential economic powerhouse in the years and decades ahead amply justifies the scope and ambition of the book.

Pluralistic Economics and Its History Ajit Sinha, Alex M. Thomas, 2019-05-24 This volume is a history of economics as it was interpreted, discussed, and established as a discipline in the 20th century. It highlights the pluralism of the discipline and brings together leading voices in the field who reflect on their lifelong work. The chapters draw on a host of traditions of economic thought including pre-classical, classical, Marxian, neoclassical, Sraffian, post-Keynesian, Cantabrigian, and institutionalist traditions in economics. Further, the volume also looks at the history of economics in India and its evolution as a discipline since the country's independence. This book will appeal to students, researchers, and teachers of economics and intellectual history as well as to the interested general reader.

The Routledge Handbook of Comparative Economic Systems Bruno Dallago, Sara Casagrande, 2022-12-19 The Routledge Handbook of Comparative Economic Systems examines the institutional bases of economies and the different ways in which economic activity can function, be organized, and governed. It examines the complexity of this academic and research field, assessing the place of comparative economic studies within economics, paying due attention to future perspectives and presenting critically important questions, analytical methods, and relative approaches. This complements the recent revival of the systemic view of economic governance, which was accelerated by the COVID-19 pandemic and likely even more the renewed East-West clash epitomized by the Russian invasion of Ukraine and the West's reaction to it. The Handbook is divided into five parts. Each part deals with an issue of relevance for the discipline. The first

and second parts look at the subject content and approach of the discipline and its comparative method The third part looks at the idiosyncratic nature of different economic systems and their constituent elements The fourth part considers the outcomes that different economic systems generate and how these outcomes change following the evolution and transformation of economic systems The last part takes stock and looks ahead at the challenges from a theoretical and applied perspective and the exogenous and endogenous factors promoting the advancement of the discipline including the interaction between and competition among varied approaches and opposing paradigms The Handbook brings together leading international contributors to reflect on the relevant debates and case or country studies provides a balanced overview of the results achieved and current knowledge as well as evolving issues and new fields of research The book provides researchers students and analysts with a complete critical and forward looking presentation and analysis of the content development challenges and perspectives of comparative economic studies Chapters 4 and 22 of this book are available for free in PDF format as Open Access from the individual product page at www.routledge.com Chapter 4 has been made available under a Creative Commons Attribution 4.0 license and Chapter 22 has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license [Socio-Economic Development](#) Adam

Economics: Context and concepts Célestin Monga, Justin Yifu Lin, 2015 For a long time economic research on Africa was

not seen as a profitable venture intellectually or professionally few researchers in top ranked institutions around the world chose to become experts in the field This was understandable the reputation of Africa centered economic research was not enhanced by the well known limitations of economic data across the continent Moreover development economics itself was not always fashionable and the broader discipline of economics has had its ups and downs and has been undergoing a major identity crisis because it failed to predict the Great Recession Times have changed many leading researchers including a few Nobel laureates have taken the subject of Africa and economics seriously enough to devote their expertise and creativity to it They have been amply rewarded the richness complexities and subtleties of African societies civilizations rationalities and ways of living have helped renew the humanities and the social sciences and economics in particular to the point that the continent has become the next major intellectual frontier to researchers from around the world In collecting some of the most authoritative statements about the science of economics and its concepts in the African context this handbook the first of two volumes opens up the diverse acuity of commentary on exciting topics and in the process challenges and stimulates the quest for knowledge Wide ranging in its scope themes language and approaches this volume explores examines and assesses economic thinking on Africa and Africa's contribution to the discipline The editors bring a set of powerful resources to this endeavor most notably a team of internationally renowned economists whose diverse viewpoints are complemented by the perspectives of philosophers political scientists and anthropologists
