Structural Studies of Macromolecules by Spectroscopic Methods Kenneth J. Ivin, **Structural Studies of Macromolecules by Spectroscopic Methods** Kenneth John Ivin, 1976 **Textbook of Polymer Science** Fred W. Billmeyer, 1984-03-21 This Third Edition of the classic best selling polymer science textbook surveys theory and practice of all major phases of polymer science engineering and technology including polymerization solution theory fractionation and molecular weight measurement solid state properties structure property relationships and the preparation fabrication and properties of commercially important plastics fibers and elastomers Introduction to Polymer Spectroscopy W. Klöpffer, 2012-12-06 This book has grown out of several courses of lectures held at the University of Mainz in the years 1978 to 1981 at the Ecole Polytechnique Fédérale Lausanne and at the University of Fribourg Switzerland The last two courses were held in the framework of the 3e Cycle lectures in June 1981 According to this genesis the emphasis of the book lies on a unified and concise approach to introducing polymer spectroscopy rather than on completeness which by the way could hardly be achieved in a single volume In contrast to other books on this subject equal weight is given to electronic spectroscopy vibrational spectroscopy and spin resonance techniques The electronic properties of polymers have been increasingly investigated in the last ten years until recently however these studies and the spectroscopic methods applied have not generally been considered as part of polymer spectroscopy The increasing use of electronic spectroscopy by polymer researchers on the other hand shows that this type of spectroscopy provides efficient tools for gaining insight into the properties of polymers which cannot be obtained by any other means Spectroscopic Techniques for Polymer Characterization Yukihiro Ozaki, Harumi Sato, 2022-03-14 An insightful exploration of cutting edge spectroscopic techniques in polymer characterization In Spectroscopic Techniques for Polymer Characterization Methods Instrumentation Applications a team of distinguished chemists delivers a comprehensive exploration of the vast potential of spectroscopic characterization techniques in polymer research The book offers a concise outline of the principles advantages instrumentation experimental techniques and noteworthy applications of cutting edge spectroscopy Covering a wide range of polymers from nylon to complex polymeric nanocomposites the author presents recent developments in polymer science to polymer analytical and material chemists assisting them in keeping track of the progress in modern spectroscopy Spectroscopic Techniques for Polymer Characterization contains contributions from pioneers in modern spectroscopic techniques from around the world The included materials bridge the gap between spectroscopists polymer scientists and engineers in academia and industry The book also offers A thorough introduction to the progress in spectroscopic techniques including polymer spectroscopy and near infrared spectroscopy Comprehensive explorations of topical polymers studied by spectroscopy including polymer thin films fluoropolymers polymer solutions conductive polymers Practical discussions of infrared imaging near infrared imaging two dimensional correlation spectroscopy and far ultraviolet spectroscopy In depth examinations of spectroscopic studies of

weak hydrogen bonding in polymers Spectroscopic Techniques for Polymer Characterization Methods Instrumentation Applications is a must read reference for polymer analytical and physical chemists as well as materials scientists and spectroscopists seeking a one stop resource for polymer characterization using spectroscopic analyses **Research Awards Index** ,1987 **Biomedical Index to PHS-supported Research** ,1987 *Biomedical Index to PHS-supported Research: pt. Macromolecular Chemistry A. D. Jenkins, John F. Kennedy, 1980 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general

coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

Natural Organic Macromolecules Bruno Jirgensons,1962 *Techniques for Polymer Organisation and Morphology Characterisation* R. A. Pethrick,C. Viney,2003-05-07 The volume describes analytical methods used in the analysis of macromolecular materials and elucidation of their structure The techniques described reflect some of the recent advances which have been made in the development of methods for characterisation and sizing of molecules in solution and solid phases The chapters are tutorial in nature and are extensively referenced and represent a significant source of information on the application of these techniques within the context of polymer science International contributors Reflects recent advances in the applications of analytical techniques for polymer characterisation
