Imagery, Memory and Cognition (PLE: Memory) John C. Yuille, 2014-05-09 Originally published in 1983 the 14 chapters in this volume are based upon

presentations made to a conference held at the University of Western Ontario in June 1981 The primary purpose of that conference was to mark the 10th anniversary of the publication of Allan Paivio's text *Imagery and Verbal Processes* and to acknowledge the continuing contribution that Paivio was making to imagery research and theory at the time His landmark book had been the major publication in the field of imagery and during the decade prior to this volume Paivio's theorizing and research dominated the investigation of imaginal processes It was felt the most appropriate way to honor his achievements and activities was to hold a conference on current developments in imagery research and theory at the time

Imagery Dr J Richardson, 2013-11-12 This advanced undergraduate textbook structures and integrates research on imagery under four headings: imagery as a personal or phenomenal experience; imagery as a mental representation; imagery as a property or attribute of materials; and imagery as a cognitive process that is under strategic control A major part of the discussion under each of these headings concerns the ways in which the structures, mechanisms, and processes in the brain mediate our subjective experience of imagery and our observable behaviour when we make use of it in cognitive tasks

Heilman, Edward Valenstein MD, 2010-04-10 Now in its Fifth Edition *Clinical Neuropsychology* reviews the major neurobehavioral disorders associated with brain dysfunction and injury Like previous editions of this book the Fifth Edition focuses on the clinical presentation of the major neurobehavioral syndromes including symptoms, signs, and methods of assessment that are useful for diagnosis and also their underlying anatomy, physiology, and pathology The major behavioral disorders that are covered include aphasia, agraphia, alexia, amnesia, apraxia, neglect, executive disorders, and dementia The text also discusses advances in assessment, diagnosis, and treatment of these disorders The authors attempt to explain the cognitive mechanisms that can account for specific symptoms and signs and to provide new information about treatment and management The authors have drawn from a wealth of new information and research that has emerged since the Fourth Edition was published in 2003 The editors have added a chapter on creativity to the Fifth Edition since there has been increased interest in creativity and brain disorders can either enhance or impair creativity This text will be of value to clinicians, investigators, and students from a variety of disciplines including neurology, psychology, cognitive neuroscience, psychiatry, and speech pathology

Review of Current Military Literature, 2009 **Military Review**, 2009 **Professional Journal of the United States Army**, 2009 *Complexity of the Self* V. F. Guidano, 1987-05-09 In this profound work Vittorio Guidano expands upon his earlier seminal contributions on the application of cognitive and developmental principles to individuals struggling with various forms of psychopathology Here he fully develops the idea that individuals experience both positive and negative

powerfully influenced by their personal psychological organizations Focusing primarily on the eating disorders the phobias with agoraphobia as the prototype obsessive compulsive patterns and depression Guidano illustrates how early developmental experiences and ongoing psychological processes may collude to perpetuate dysfunctional patterns and personal distress The central and perhaps most exciting thesis in this new expression of Guidano s thinking is that the deep structure or core organizing processes that constrain human psychological experience may be at the heart of successful intervention as well as the classical problems of resistance relapse and refractory behaviors Guidano s contention is at once simple and powerful those psychological processes involved in the development and maintenance of personal identity or self that should be the primary foci of research and intervention in psychological disorders The meaning of Guidano s perspective for clinical practice is perhaps best expressed in the author s own words Knowing the basic elements of the personal cognitive organization that underlie the pattern of disturbed behavior and emotions the therapist can behave from the beginning in such a way as to build a relationship as effective as possible for that particular client In other words the therapist should be able to establish a relationship that respects the client s personal identity and systemic coherence and that at the same time does not confirm the basic pathogenic assumptions For example in working with agoraphobics the therapist has to respect their self images centered on the need to be in control He she can do this by avoiding any direct attack on their controlling attitudes and by leaving them a wide margin of control in the relationship At the same time the therapist should avoid confirming their assumptions about the somatic origin of their emotional disturbances or about their inborn fragility In short the therapist who can anticipate the models of self and reality tacitly entertained by the client is surely better able to help the development of a cooperative and secure therapeutic relationship than the therapist who cannot make such anticipations This timely and provocative volume offers exciting new ideas about how to conceptualize and facilitate change in the self system With the rare combination of his Renaissance intellect and integrative practical expertise Guidano has been able to draw together many disparate themes from object relations theory ego psychology attachment theory constructivist models of human cognition and lifespan developmental psychology It is must reading for the practicing professional the helping apprentice and anyone interested in glimpsing the cutting edge at the growing interface between cognitive and clinical science

Thinking and Reasoning (Psychology Revivals) Jonathan Evans, 2013-12-19 The subject of thinking is the oldest in the whole science of psychology going back to well before the separation of the disciplines of philosophy and psychology Originally published in 1983 this collection of up to date critical essays about thinking with particular emphasis on reasoning is written from the perspective of psychologists who are themselves actively engaged in research into the nature of human thought The editor's introduction identifies the major issues which have traditionally concerned students of human thought and provides an historical background It describes how at first the subject was studied by introspection and how this method fell into disrepute at the end of last century A satisfactory alternative has not yet emerged although much recent work is based on the information processing model which sees the brain as a sophisticated computer Consequently the papers presented in this volume deal with a wide range of issues and a number of different experimental tasks and paradigms They cover most current approaches to the theory and methodology of cognitive psychology including problem solving the relationship between language and thought and reasoning

Private Speech Rafael M. Diaz, Laura E. Berk, Rafael Diaz, 2014-02-04 Since the publication of Vygotsky's Thought and Language in the United States a number of North American and European

investigators have conducted systematic observations of children's spontaneous private speech giving substantial support to Vygotsky's major hypotheses particularly those regarding the social origins of higher psychological functions. However, there still remain many vital questions about the origins, significance, and functions of private speech. How can social and private speech be validly differentiated? What kinds of social interactions promote the use of private speech? What are the sources of individual differences in the use of private speech? This unique volume addresses these and many other important questions. Characterized by a strong emphasis on original data, it reports on systematic observations of spontaneous private speech in children and adults in both laboratory and naturalistic settings. In addition to its systematic analysis of common methodological problems in the field, the book contains the most comprehensive bibliography of the private speech literature currently available.

Imagery John T. E. Richardson, 1999. This advanced undergraduate textbook structures and integrates research on imagery under four headings: imagery as a personal or phenomenal experience; imagery as a mental representation; imagery as a property or attribute of materials; and imagery as a cognitive process that is under strategic control. A major part of the discussion under each of these headings concerns the ways in which the structures, mechanisms, and processes in the brain mediate our subjective experience of imagery and our observable behaviour when we make use of it in cognitive tasks.

Metacognition in Educational Theory and Practice Douglas J. Hacker, John Dunlosky, Arthur C. Graesser, 1998-03-01. This volume presents the most current perspectives on the role of metacognition in diverse educationally relevant domains. The purpose is to examine the ways in which theoretical investigations of metacognition have recently produced a strong focus on educational practice. The book is organized around four general themes relevant to education: metacognition and problem solving; metacognition and verbal comprehension; metacognition and the education of nontraditional populations; and metacognition and studentship. Chapter authors review current literature as it applies to their chapter topic, discuss theoretical implications and suggestions for future research, and provide educational applications. Each chapter describes testable theory and provides examples of how theory can be applied to the classroom. The volume will have wide appeal to researchers and students concerned with the scientific investigation of metacognition and to practitioners concerned with the cultivation of learning and achievement in their students. The unique contribution of this book to the literature on metacognition is its presentation of the most current research examining specific theoretical aspects of metacognition in domains directly relevant to education. This is especially valuable for the many researchers and practitioners who subscribe to the concept that by fostering metacognitive processes during instruction, more durable and transferable learning can be achieved.
