Silicon And Beyond: Advanced Device Models And Circuit Simulators Tor A Fjeldly, Michael S Shur, 2000-04-20 The steady downscaling of device feature size combined with a rapid increase in circuit complexity as well as the introduction of new device concepts based on non silicon material systems poses great challenges for device and circuit designers One of the major tasks is the development of new and improved device models needed for accurate device and circuit design Another task is the development of new circuit simulation tools to handle very large and complex circuits This book addresses both these issues with up to date reviews written by leading experts in the field The first three chapters of the book discuss advanced device models both for existing technologies and for new emerging technologies Among the topics covered are models for MOSFETs thin film transistors TFTs and compound semiconductor devices including GaAs HEMTs and HFETs heterodimensional devices quantum tunneling devices as well as wide bandgap devices Chapters 4 and 5 discuss advanced circuit simulators that hold promise for handling circuits of much higher complexity than what is possible for typical state of the art circuit simulators today Structure and Interpretation of Computer Programs, second edition Harold

editions used the programming language Scheme in their program examples This new version of the second edition has been adapted for JavaScript The first three chapters of SICP cover programming concepts that are common to all modern high level programming languages Chapters four and five which used Scheme to formulate language processors for Scheme required significant revision Chapter four offers new material in particular an introduction to the notion of program parsing The evaluator and compiler in chapter five introduce a subtle stack discipline to support return statements a prominent feature of statement oriented languages without sacrificing tail recursion The JavaScript programs included in the book run in any implementation of the language that complies with the ECMAScript 2020 specification using the JavaScript package sicmp provided by the MIT Press website
