The Structure of Computers and Computations David J. Kuck, 1978 The structure of computers D J Kuck v 1 The Structure of Computers and Computations David J. Kuck, 1980-03-01 Computer Systems Organization general **Computer Literature Bibliography** United States. National Bureau of Standards, 1965 *Computer Literature Bibliography: 1946-1963* W. W. Youden, 1965 Conceptual Structures: Logical, Linguistic, and Computational Issues Bernhard Ganter, 2000-07-31 This book constitutes the refereed proceedings of the 8th International Conference on Conceptual Structures ICCS 2000 held in Darmstadt Germany in August 2000 The 38 revised full papers presented have been carefully reviewed and selected for inclusion in the proceedings The book is divided in topical sections on concepts and language conceptual ontology conceptual graphs formal semantics of conceptual structures contextual logic and formal concept analysis conceptual structures in practice and computational aspects of conceptual structures **Computational Design of Lightweight Structures** Benoit Descamps, 2014-03-10 The author of this book presents a general robust and easy to use method that can handle many design parameters efficiently Following an introduction Chapter 1 presents the general concepts of truss layout optimization starting from topology optimization where structural component sizes and system connectivity are simultaneously optimized To fully realize the potential of truss layout optimization for the design of lightweight structures the consideration of geometrical variables is then introduced Chapter 2 addresses truss geometry and topology optimization by combining mathematical programming and structural mechanics the structural properties of the optimal solution are used for devising the novel formulation To avoid singularities arising in optimal configurations this approach disaggregates the equilibrium equations and fully integrates their basic elements within the optimization formulation The resulting tool incorporates elastic and plastic design stress and displacement constraints as well as self weight and multiple loading The inherent slenderness of lightweight structures requires the study of stability issues As a remedy Chapter 3 proposes a conceptually simple but efficient method to include local and nodal stability constraints in the formulation Several numerical examples illustrate the impact of stability considerations on the optimal design Finally the investigation on realistic design problems in Chapter 4 confirms the practical applicability of the proposed method It is shown how we can generate a range of optimal designs by varying design settings *The Scientific Imagination* Arnon Levy, Peter Godfrey-Smith, 2020 This book looks at the role of the imagination in science from both philosophical and psychological perspectives These contributions combine to provide a comprehensive and exciting picture of this under explored subject **ECCOMAS Multidisciplinary Jubilee Symposium** Josef Eberhardsteiner, Christian Hellmich, Herbert A. Mang, Jacques Périaux, 2008-12-16 This book contains 23 papers presented at the ECCOMAS Multidisciplinary Jubilee Symposium New Computational Challenges in Materials Structures and Fluids EMJS08 in Vienna February 18 20 2008 The main intention of EMJS08 was to react adequately to the increasing need for interdisciplinary research activities allowing of

cient solution of complex problems in engineering and in the applied sciences The 15th anniversary of ECCOMAS European Community on Computational Methods in Applied Sciences provided a suitable frame for taking the afo mentioned situation into account by inviting distinguished colleagues from d ferent areas of engineering and the applied sciences encouraging them to choose multidisciplinary topics for their lectures The main themes of EMJS08 have a long tradition in engineering and in the applied sciences materials structures and uids The solution of scienti c pr lems involving uids together with solids and structures not to forget the materials the structures are made of is of paramount importance in a technical world of rapidly increasing sophistication referred to as the Leonardo World by the eminent German philosopher Ju rgen Mittelstra More recently the main themes of EMJS08 have gained considerable mom tum owing to signi cant progress in nanotechnology It enables resolution of a multitude of materials into their micro and nanostructures Covering aspects such as Physical and chemical characterization Multiscale modeling concepts continuum micromechanics and computational homogenization as well as Applications in various engineering elds the individual contributions to this book ow along different tracks of uids materials and structures
