

Internal structure

- Rings can be very thin. Radial structures can be produced by gravitational forces (such as tides from nearby moons).
- Example: Cassini division in Saturn's rings. Weaker disturbances and wave patterns can divide a ring into myriads of ringlets.

Structure Of Rings:

Structure of Rings Nathan Jacobson, 1964 The main purpose of this volume is to give an account of the important developments in the theory of non commutative rings These are the structure theory of rings without finiteness assumptions cohomology of algebras and structure and representation theory of non semi simple rings Frobenius algebras quasi Frobenius rings

Structure of Rings Nathan Jacobson, 1964 **Modules and the Structure of Rings** Golan, 1991-04-24 This book offers vital background information on methods for solving hard classification problems of algebraic structures It explains how algebraists deal with the problem of the structure of modules over rings and how they make use of these structures to classify rings

Structure of Rings Nathan Jacobson, 1964 Modules and the Structure of Rings Golan, 2017-10-19 This textbook is designed for students with at least one solid semester of abstract algebra some linear algebra background and no previous knowledge of module theory Modules and the Structure of Rings details the use of modules over a ring as a means of considering the structure of the ring itself explaining the mathematics and inductive reasoning used in working on ring theory challenges and emphasizing modules instead of rings Stressing the inductive aspect of mathematical research underlying the formal deductive style of the literature this volume offers vital background on current methods for solving hard classification problems of algebraic structures Written in an informal but completely rigorous style Modules and the Structure of Rings clarifies sophisticated proofs avoids the formalism of category theory aids independent study or seminar work and supplies end of chapter problems This book serves as an excellent primary text for upper level undergraduate and graduate students in one semester courses on ring or module theory laying a foundation for more advanced study of homological algebra or module theory

Structure of Rings, by Nathan Jacobson, ... Nathan Jacobson, 1956 **Structure of Rings** Nathan Jacobson (Hochschullehrer, Mathematiker, Polen, USA), 1984 *The Algebraic Structure of Group Rings* Donald S. Passman, 2011-01-01 Highly recommended by the Bulletin of the London Mathematical Society this book offers a comprehensive self contained treatment of group rings The subject involves the intersection of two essentially different disciplines group theory and ring theory The Bulletin of the American Mathematical Society hailed this treatment as a majestic account proclaiming it encyclopedic and lucid 1985 edition

Cyclic Modules and the Structure of Rings S. K. Jain, Ashish K. Srivastava, Askar A. Tuganbaev, 2012-09-27 This unique and comprehensive volume provides an up to date account of the literature on the subject of determining the structure of rings over which cyclic modules or proper cyclic modules have a finiteness condition or a homological property The finiteness conditions and homological properties are closely interrelated in the sense that either hypothesis induces the other in some form This is the first book to bring all of this important material on the subject together Over the last 25 years or more numerous mathematicians have investigated rings whose factor rings or factor modules have a finiteness condition or a homological property They made important contributions leading to new directions and questions which are listed at the

end of each chapter for the benefit of future researchers There is a wealth of material on the topic which is combined in this book it contains more than 200 references and is not claimed to be exhaustive This book will appeal to graduate students researchers and professionals in algebra with a knowledge of basic noncommutative ring theory as well as module theory and homological algebra equivalent to a one year graduate course in the theory of rings and modules Structure of Rings Donald Glen Johnson,196? **Structure of Rings** Daniel S. The Structure of Rings with Certain Conditions on Elements Soha Arif Abdul Baki, American University of Beirut. Faculty of Arts and Sciences. Department of Mathematics, 1999 First we give the structure of a ring which is multiplicatively generated by idempotents A finite ring which has this property is Boolean also a ring with identity having this property is necessarily Boolean Second we give the structure of a ring which is multiplicatively generated by idempotents and nilpotents An Artinian ring which is multiplicatively generated by its nilpotents is nilpotent also a ring which is multiplicatively generated by its nilpotents and satisfies the polynomial identity $x^2 = 0$ is nil In the same context a ring R which is multiplicatively generated by nilpotents and idempotents such that the set N of nilpotents is commutative has the property that N is an ideal of R and R/N is Boolean Finally we give the structure of certain periodic rings A periodic ring R such that the set N of nilpotents is commutative and every element of R is uniquely written as a sum of an idempotent and a nilpotent has necessarily the property that N is an ideal of R and R/N is Boolean Moreover a periodic ring R with identity such that the set N is commutative and every zero divisor of the ring is uniquely written as a sum of an idempotent and a nilpotent has again the property that N is an ideal but now R/N is either a Boolean ring or a field The Thesis is based on the articles of M S Putcha A Yaqub 1 H Abu Khuzam 2 and H Abu Kuzam A Yaqub 3
