Compact Stars in Binaries Jan van Paradijs, E.P. van den Heuvel, Erik Kuulkers, 1996-01-31 IAU symposium 165 Compact Stars in Binaries was held from 15 through 19 August 1994 as part of the 22nd General Assembly of the IAU in The Hague The symposium supported by IAU Commissions 35 37 44 and 48 and co sponsored by Commission 42 was attended by about 400 to 500 participants This symposium received support from The International Astronomical Union The Royal Netherlands Academy of Sciences The Netherlands Ministry of Education and Science The Leids Kerkhoven Bosscha Fonds The Stichting Fysica The field of compact stars in binaries is one of the most active areas of present day astrophysics An absolute highlight of the last few years was the 1993 Nobel Prize of physics awarded to Taylor and Hulse for their discovery of the binary pulsar PSR 1513-16 and the measurement of the orbital decay of this system due to the emission of gravitational waves The aim of the organizers of the symposium was to present an overview of the most significant observational discoveries of the past decade in combination with a review of the most important theoretical developments We were very happy that most of the world's leading experts in observation and theory were present at the symposium to review the various aspects of the subject The contents of their oral presentations are now published in the form of these proceedings which we expect to become an important source of reference for the coming years **Structure and Evolution of Close Binary Systems. Interacting Binaries S.N. Shore, M. Livio, E.P.J. van den Heuvel, 2006-01-27 Observational and Theoretical Issues of Interacting Binaries was the topic of the 22nd Advanced Course of the Swiss Society for Astrophysics and Astronomy It was the first time that binary systems were the center of attention of our course The established concept and organisation of the Advanced Course has been retained three scientists all acknowledged experts in their respective fields were each invited to give nine one hour lectures within the period of a week The Advanced Course took place from April 6 to 11 1992 at Les Diablerets a charming resort in the Swiss alps The high level of the lectures the international background of the 65 participants including many young students and the beauty of the surroundings all contributed to the success of the course The lecture notes of this course the 22nd in our series are also the third to be published by Springer Verlag Well over half of all stars seem to exist in binary systems The study of binary evolution is therefore essential for our understanding of stellar evolution in general The evolution of interacting binaries contains in itself many of the problems met in other fields of modern astrophysics This is very apparent in these lecture notes **Structure and Evolution of Close Binary Systems**

,1976 **Black Holes in the Era of Gravitational-Wave Astronomy** Manuel Arca Sedda,Elisa Bortolas,Mario Spera,2024-05-14 Black Holes in the Era of Gravitational Wave Astronomy provides a multidisciplinary up to date view of the physics of black holes along with an exhaustive overview of crucial open questions and recent advancements in the astrophysics of black holes in the wake of incredible advancements made in the last decade It includes discussions on improvements in theoretical modeling and observational perspectives for black holes of all sizes along with associated challenges The book s structure and themes will enable an entwined understanding of black hole physics at all scales thus avoiding the compartmentalized view that is typical of more specialized manuscripts and reviews This book is a complete reference for scientists interested in a multidirectional approach to the study of black holes It provides substantial discussions about the interplay of different types of black holes and gives professionals a heterogeneous and comprehensive overview of the astrophysics of black holes of all masses Focuses on recent advances and future perspectives surrounding black holes providing researchers with a clear view of cutting edge research Offers readers a multidisciplinary fresh view on black holes discussing and reviewing the most recent advancements in theoretical numerical and observational techniques put in place to detect black holes Provides a bridge among different black hole areas fostering new collaborations among professionals working in different but intrinsically interconnected fields

Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics. Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months. This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user. Volume 3 contains literature published in 1970 and received before August 1970; some older literature which was received late and which is not recorded in earlier volumes is also included.

Astronomy and Astrophysics Abstracts S. Böhme, U. Esser, H. Hefele, I. Heinrich, W. Hofmann, D. Krahn, V. R. Matas, L. D. Schmadel, G. Zech, 2013-12-14

From the reviews: *Astronomy and Astrophysics Abstracts* has appeared in semi-annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy, astrophysics and neighbouring sciences. It is the most important English language abstracting journal in the mentioned branches. The abstracts are classified under more than hundred subject categories thus permitting a quick survey of the whole extended material. The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences. As such it represents a necessary ingredient of any astronomical library all over the world.

Space Science Reviews 1

Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts. Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use. The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes.
