

Structure-Function of the Gonadotropins; members of the glycoprotein hormone family

- Lutropin (LH), follitropin (FSH) are expressed in the pituitary and Choriogonadotropin (CG) is synthesized in the placenta of primates and equids
- Non-covalent heterodimers composed of a common α subunit and a hormone-specific β subunit. Only dimers are active; monomeric subunits do not bind to the cognate receptor. Both LH and CG activate the LH/CG receptor (LHR)

Structure And Function Of The Gonadotropins:

Structure and Function of the Gonadotropins Kenneth W. McKerns, 2012-12-06 In September of 1977 scientists from many countries met at the Asticou Inn in Maine to present and discuss papers written especially for this monograph The presentations were informal and directed to the special interests of the audience in order to generate discussions The authors many of whom are pioneers and leaders in their field then had the opportunity to revise their contributions which were brought together with the edited discussions to form this volume The basic research studies presented here are important because of the essential role of gonadotropins in regulating the ovary and testis This monograph will therefore be of interest to those concerned with fertility regulation population control possible new methods for contraception and to those concerned with reproduction in domestic animals Researchers in other fields may find this monograph useful as it has been determined that gonadotropins are secreted by many tumors and are implicated in many cancers Human
