*Structure and Structure Development of Al-Zn Alloys* H. Löffler, Hans Löffler, 1995-05-09 Age hardenable aluminium based alloys have several favourable properties e g high electrical conductivity and good strength with respect to their fairly low density Among them the Al Zn system is particularly suitable for studying phase transformations in supersaturated solid solutions from both the technological and the physical point of view The decomposition processes in the Al Zn system have been studied by many authors over the last three decades Thus a huge amount of information concerning the behaviour and properties of Al Zn alloys is available which can hardly be overlooked The authors of this book present a well structured summary of this knowledge For better understanding of the processes proceeding in Al Zn alloys some general features of binary Al alloys as well as a few theoretical aspects of metal physics are given as introducing chapters The closing chapter presents interesting new developments af Al based materials

Advanced Aluminum Alloys Conta L. S. Toropova, D. G. Eskin, M. L. Kharakterova, T. V. Dobatkina, 2017-07-05 This is the first book to generalize and analyze the extensive experimental and theoretical results on the phase composition structure and properties of aluminum alloys containing scandium The effects of scandium on these properties are studied from a physico chemical viewpoint The authors present binary ternary and more complex phase diagrams for these alloys and consider in detail recrystallization superplastic behavior and decomposition of supersaturated solid solutions and the effects of solidification conditions on phase equilibria

**Processing-Structure-Property Relationships in Metals** Alessandra Varone, Roberto Montanari, 2019-11-04 In the industrial manufacturing of metals the achievement of products featuring desired characteristics always requires the control of process parameters in order to obtain a suitable microstructure The strict relationship among process parameters microstructure and mechanical properties is a matter of interest in different areas such as foundry plastic forming sintering welding etc and regards both well established and innovative processes Nowadays circular economy and sustainable technological development are dominant paradigms and impose an optimized use of resources a lower energetic impact of industrial processes and new tasks for materials and products In this frame this
