Structures And Spatialtemporal Chaos In Nonequilibrium Media:

Structures and Spatial-Temporal Chaos in Nonequilibrium Media Andrei V. Gaponov-Grekhov, M[ikhail] I. Rabinovich, Gaponov-Grekhov, 1989-01 **Conformal Field Theory and Critical Phenomena in Two Dimensional Systems** A.B. Zamolodchikov, 1989-01-31 Nonlinear Waves in Active Media Jüri Engelbrecht, 2012-12-06

Tiis volume contains the contributions to the Euromech Colloquium No 241 on Nonlinear Waves in Active Media at the Institute of Cybernetics of the Estonian Academy of Sciences Tallinn Estonia USSR September 27 30 1988 The Co chairmen of the Euromech Colloquium felt that it would be a good service to the community to publish these proceedings First the topic itself dealing with various wave processes with energy influx is extremely interesting and attracted a much larger number of participants than usual a clear sign of its importance to the scientific community Second Euromech No 241 was actually the first Euromech Colloquium held in the Soviet Union and could thus be viewed as a milestone in the extending scientific contacts between East and West At the colloquium 50 researchers working in very different branches of science met to lecture on their results and to discuss problems of common interest An introductory paper by I Engelbrecht presents the common motivation and background of the topics covered Altogether 36 speakers presented their lectures of which 30 are gathered here The remaining six papers which will appear elsewhere are listed on page X In addition three contributions by authors who could not attend the colloquium are included The two lectures given by A S Mikhailov V S Davydov and V S Zikov are here published as one long paper Dynamical Systems and Statistical Mechanics Ākov Grigor'evich Sinai, 1991

Dynamical systems and statistical mechanics have been developing in close interaction during the past decade and the papers in this book attest to the productiveness of this interaction The first paper in the collection contains a new result in the theory of quantum chaos a burgeoning line of inquiry which combines mathematics and physics and which is likely in time to produce many new connections and applications Another paper related to the renormalization group method for the study of maps of the circle with singularities due to a jump in the derivative demonstrates that the fixed point of the renormgroup can in this case be sufficiently described In certain situations the renormgroup methods work better than the traditional KAM method Other topics covered include thermodynamic formalism for certain infinite dimensional dynamical systems numerical simulation of dynamical systems with hyperbolic behaviour periodic points of holomorphic maps the theory of random media statistical properties of the leading eigenvalue in matrix ensembles of large dimension spectral properties of the one dimensional Schrodinger operator This volume will appeal to many readers as it covers a broad range of topics and presents a view of some of the frontier research in the Soviet Union today **Spin Supercurrent and Magnetic Relaxation in Helium-3** A. S. Borovik-Romanov, 1990 The results of experiments in which magnetization transfer at a considerable distance in ^3He B the flow of spin current along a capillary due to a gradient in the phase of the order parameter and phase slippage when a critical value of the current is reached are observed Advances in Theoretical

Physics Alan H. Luther, 2013-10-22 At Copenhagen in June 1988 the 80th Anniversary of the birth of L D Landau the much respected Soviet physicist and author of the Course on Theoretical Physics published by Pergamon Press was celebrated with an International Symposium in his honour The papers presented at that meeting are published here providing an overview of recent progress in theoretical physics covering super string theories chaos high Tc superconductivity and biomolecules

Physics Reviews A. M. Dyugaev, 1991 **X-Ray and Electron-Diffraction Study of Langmuir-Blodgett Films** L. A. Feigin, Yu. M. Lvov, V. I. Troitsky, 1989 Discusses the advances in methods of research into the structure of Langmuir Blodgett multilayers and films with the predetermined alternation of molecular layers Also included are the structural analysis of films on substrates the diffraction effects associated with very thin films and news on the latest method of determining the packing of molecules in monomolecular layers Additional Symmetries and Exactly Solvable Models in Two Dimensional Conformal Field Theory S. L. Lukyanov, V. A. Fateev, 1991 Dynamics Of Planetary Rings And The Prediction Of New Uranian Satellites A. M. Fridman, N. N. Gor'kavyi, 1989 **Spin Glasses and Related Problems** V. S. Dotsenko, M. V. Feigel'man, L. B. Ioffe, 1990 Three scientists from the L D Landau Institute of Theoretical Physics Moscow review recent developments in the theory of spin glasses and related strongly disordered systems They discuss in particular the problems of irreversibility and nonergodicity in the framework of the mean field theory a phase transition in three dimensional spin glasses and glass like systems with hidden correlations Addressed to researchers in theoretical physics Book club price 59 Annotation copyrighted by Book News Inc Portland OR **Chua's Circuit: A Paradigm For Chaos** Rabinder N Madan, 1993-11-20 For uninitiated researchers engineers and scientists interested in a quick entry into the subject of chaos this book offers a timely collection of 55 carefully selected papers covering almost every aspect of this subject Because Chua's circuit is endowed with virtually every bifurcation phenomena reported in the extensive literature on chaos and because it is the only chaotic system which can be easily built by a novice simulated in a personal computer and tractable mathematically it has become a paradigm for chaos and a vehicle for illustrating this ubiquitous phenomenon Its supreme simplicity and robustness has made it the circuit of choice for generating chaotic signals for practical applications In addition to the 48 illuminating papers drawn from a recent two part Special Issue March and June 1993 of the Journal of Circuits Systems and Computers devoted exclusively to Chua's circuit several highly illustrative tutorials and incisive state of the art reviews on the latest experimental computational and analytical investigations on chaos are also included To enhance its pedagogical value a diskette containing a user friendly software and data base on many basic chaotic phenomena is attached to the book as well as a gallery of stunningly colorful strange attractors Beginning with an elementary freshman level physics introduction on experimental chaos the book presents a step by step guided tour with papers of increasing complexity which covers almost every conceivable aspects of bifurcation and chaos The second half of the book contains many original materials contributed by world renowned authorities on chaos including L P Shil'nikov A N Sharkovsky M Misiurewicz A I Mees R Lozi L O Chua

and V S Afraimovich The scope of topics covered is quite comprehensive including at least one paper on each of the following topics routes to chaos 1 D maps universality self similarity 2 parameter renormalization group analysis piecewise linear dynamics slow fast dynamics confor analysis symmetry breaking strange attractors basins of attraction geometric invariants time series reconstruction Lyapunov exponents bispectral analysis homoclinic bifurcation stochastic resonance synchronization and control of chaos as well as several novel applications of chaos including secure communications visual sensing neural networks dry turbulence nonlinear waves and music

Polarization Properties of Liquid Crystals S. A. Pikin, M. A. Osipov, E. M. Terent'ev, 1989 This volume presents the theoretical investigations of the polarization properties of liquid crystals It describes induced polarized structures and the effects which result from the interaction between the spontaneous or induced polarization and orientational non uniformities in the media Section 2 presents the phenomenological theory of ferroelectricity in smectic C liquid crystals a symmetry analysis a discussion on free energy and a description of some effects reflecting the influence of the boundaries and external forces Sections 3 and 4 focus on the molecular statistical theory of polarizational properties

X-Ray Diffraction Study of Nematic Smectic A and C Liquid Crystals B. I. Ostrovskii, 1989 Reviews recent studies of X ray scattering phenomena in liquid crystals in particular their relationship to phase transition physics Also explored are the main approximations which are used to obtain structural information from the scattering spectre of liquid crystals and to determine the short range order in the molecule arrangement

Nonlinear Evolution of Spatio-Temporal Structures in Dissipative Continuous Systems F.H. Busse, L. Kramer, 2012-12-06 This volume contains papers contributed to the NATO Advanced Research Workshop Nonlinear Evolution of Spatio Temporal Structures in Dissipative Continuous Systems held in Streitberg Fed Rep Germany Sept 24 through 30 1989 The purpose of the rather long title has been to focus attention on a particularly fruitful direction of research within the broad field covered by terms like Nonlinear Dynamics or Non Equilibrium Systems After physicists have been occupied for several decades mainly with the microscopic structure of matter recent years have witnessed a resurgence of interest in macroscopic patterns and dynamics Research on these latter phenomena has not been dormant of course since fluid dynamicists interested in the origin of turbulence meteorologists studying weather patterns and numerous other scientists have continued to advance the understanding of the structures relevant to their disciplines The recent progress in the dynamics of nonl inear systems wi th few degrees of freedom and the discovery of universal laws such as the Feigenbaum scaling of period doubling cascades has given rise to new hopes for the understanding of common principles underlying the spontaneous formation of structures in extended continuous systems

Selforganization by Nonlinear Irreversible Processes Werner Ebeling, Heinz Ulbricht, 2012-12-06 These Proceedings contain invited lectures presented at the third Interna tional Conference on Irreversible Processes and Dissipative Structures in Kiihlungsborn German Democratic Republic in March 1985 These con ferences the first of which was held in Rostock in 1977 and the second in Berlin in 1982

are devoted to the study of irreversible processes far from thermal equilibrium and to the phenomena of selforganization The meeting in Kiihlungsborn brought together some 160 mathematicians physicists chemists and biologists from 10 countries who are all interested in the interdisciplinary field of synergetics The main topics of the conference were basic concepts of selforganization and evolution such as entropy instabilities nucleation dissipative structures chaos and turbulence The contributions cover methods from thermodynamics the theory of dynamic systems stochastic and statistic theory the method of Green's functions the fluctuation dissipation theorem etc Several problems are studied in more detail e.g. the kinetics of nucleation especially in finite systems the dynamics of interfaces reaction diffusion systems chemical and biochemical pattern formation and information processing Further several contributions are devoted to the development of the concepts of chaos and turbulence The editors hope that the contributions collected in this volume will provide some new information about the field of selforganization which is in full development now

Advances in Soviet Mathematics, 1991 Applied Mechanics Reviews, 1989 **Nonlocal Acoustoelectronic Effects in Metals and Layered Conductors** V. Gokhfel'd, V. G. Peeschansky, 1993 *Nonlinear Waves 1* Andrei V. Gaponov-Grekhov, Mikhail I. Rabinovich, Jüri Engelbrecht, 2012-12-06

Since 1972 the Schools on Nonlinear Physics in Gorky have been a meeting place for Soviet scientists working in this field Instead of producing for the first time English proceedings it has been decided to present a good cross section of nonlinear physics in the USSR Thus the participants at the last School were invited to provide English reviews and research papers for these two volumes which in the years to come will be followed by the proceedings of forthcoming schools The first volume starts with a historical overview of nonlinear dynamics from Poincaré to the present day and touches topics like attractors nonlinear oscillators and waves turbulence pattern formation and dynamics of structures in nonequilibrium dissipative media It then deals with structures bistabilities instabilities chaos dynamics of defects in 1d systems self organizations solitons spatio temporal structures and wave collapse in optical systems lasers plasmas reaction diffusion systems and solids
