Structures Or Why Things Dont Fall Down:

Structures J E Gordon, 1991-09-26 In The New Science of Strong Materials the author made plain the secrets of materials science In this volume he explains the importance and properties of different structures

Structures or Why things don't fall down J. Gordon, 2012-12-06 I am very much aware that it is an act of extreme rashness to attempt to write an elementary book about structures Indeed it is only when the subject is stripped of its mathematics that one begins to realize how difficult it is to pin down and describe those structural concepts which are often called elementary by which I suppose we mean basic or fundamental Some of the omissions and oversimplifications are intentional but no doubt some of them are due to my own brute ignorance and lack of understanding of the subject Although this volume is more or less a sequel to The New Science of Strong Materials it can be read as an entirely separate book in its own right For this reason a certain amount of repetition has been unavoidable in the earlier chapters I have to thank a great many people for factual information suggestions and for stimulating and sometimes heated discussions Among the living my colleagues at Reading University have been generous with help notably Professor W D Biggs Professor of Building Technology Dr Richard Chaplin Dr Giorgio Jeronimidis Dr Julian Vincent and Dr Henry Blyth Professor Anthony Flew Professor of Philosophy made useful suggestions about the last chapter I am also grateful to Mr John Bartlett Consultant Neurosurgeon at the Brook Hospital Professor T P Hughes of the University of the West Indies has been helpful about rockets and many other things besides My secretary Mrs Jean Collins was a great help in times of trouble Mrs Nethercot of Vogue was kind to me about dressmaking Mr Gerald Leach and also many of the editorial staff of Penguins have exercised their accustomed patience and helpfulness Among the dead I owe a great deal to Dr Mark Pryor lately of Trinity College Cambridge especially for discussions about biomechanics which extended over a period of nearly thirty years Lastly for reasons which must surely be obvious I owe a humble oblation to Herodotus once a citizen of Halicarnassus

Structures James Edward Gordon, 1978 *Building Structures* Malcolm Millais, 2005 This text will appeal to anyone with an interest in buildings Both interested layman and all types of building professional will benefit from the explanations given for the behaviour of structures as they form part of buildings No prior knowledge is assumed and no mathematics is used

Structures by Design Rob Whitehead, 2019-07-19 Winner of the 2021 TAA Textbook Excellence Award Honorable Mention of the 2021 BTES Book Award Structures by Design Thinking Making Breaking is a new type of structures textbook for architects who prefer to learn using the hands on creative problem solving techniques typically found in a design studio Instead of presenting structures as abstract concepts defined by formulas and diagrams this book uses a project based approach to demonstrate how a range of efficient effective and expressive architectural solutions can be generated tested and revised Each section of the book is focused on a particular manner by which structural resistance is provided Form Arches and Cables Sections Beams Slabs and Columns Vectors Trusses and Space Frames Surfaces Shells and Plates and Frames Connections and High Rises The design exercises featured

in each chapter use the Think Make Break method of reiterative design to develop and evaluate different structural options A variety of structural design tools will be used including the human body physical models historical precedents static diagrams traditional formulae and advanced digital analysis The book can be incorporated into various course curricula and studio exercises because of the flexibility of the format and range of expertise required for these explorations More than 500 original illustrations and photos provide example solutions and inspiration for further design exploration The Built Environment Wendy R. McClure, Tom J. Bartuska, 2011-09-09 This book takes a sweeping view of the ways we build things beginning at the scale of products and interiors to that of regions and global systems In doing so it answers questions on how we effect and are affected by our environment and explores how components of what we make from products buildings and cities are interrelated and why designers and planners must consider these connections **Nature's Machines** David E. Alexander, 2017-08-15 Nature's Machines An Introduction to Organismal Biomechanics presents the fundamental principles of biomechanics in a concise accessible way while maintaining necessary rigor It covers the central principles of whole organism biomechanics as they apply across the animal and plant kingdoms featuring brief tightly focused coverage that does for biologists what H M Frost's 1967 Introduction to Biomechanics did for physicians Frequently encountered basic concepts such as stress and strain Young's modulus force coefficients viscosity and Reynolds number are introduced in early chapters in a self contained format making them quickly available for learning and as a refresher More sophisticated integrative concepts such as viscoelasticity or properties of hydrostats are covered in the later chapters where they draw on information from multiple earlier sections of the book Animal and plant biomechanics is now a common research area widely acknowledged by organismal biologists to have broad relevance Most of the day to day activities of an animal involve mechanical processes and to the extent that organisms are shaped by adaptive evolution many of those adaptations are constrained and channelized by mechanical properties The similarity in body shape of a porpoise and a tuna is no coincidence Many may feel that they have an intuitive understanding of many of the mechanical processes that affect animals and plants but careful biomechanical analyses often yield counterintuitive results soft squishy kelp may be better at withstanding pounding waves during storms than hard shelled mollusks really small swimmers might benefit from being spherical rather than streamlined our bones can operate without breaking for decades whereas steel surgical implants exhibit fatigue failures in a few months if not fully supported by bone Offers organismal biologists and biologists in other areas a background in biomechanics to better understand the research literature and to explore the possibility of using biomechanics approaches in their own work Provides an introductory presentation of the everyday mechanical challenges faced by animals and plants Functions as recommended or required reading for advanced undergraduate biology majors taking courses in biomechanics supplemental reading in a general organismal biology course or background reading for a biomechanics seminar course Christian Apologetics and Philosophy Paul Herrick, 2024-10-01 A highly readable introduction to Christian apologetics

that joins contemporary analytic philosophy with modern biblical scholarship In this book Paul Herrick presents the basics of classical Christian apologetics in the form of an inference to the best explanation argument that builds from the book's first chapter to its last Drawing on contemporary philosophy logic and biblical scholarship Herrick incorporates thoughts from Socrates Plato Thomas Aquinas and C S Lewis as well as scholars such as William Lane Craig J P Moreland Richard Swinburne and Craig Blomberg to present a multifaceted argument for the Christian faith With sections on the Socratic method the Christian examination of conscience the Big Bang miracles the historical reliability of the New Testament the resurrection of Christ and more this book promises to be useful intellectually and spiritually for seekers doubters and those already in the faith

Mad about Physics Christopher Jargodzki, Franklin Potter, 2002-02-28 Why is there eight times more ice in Antarctica than in the Arctic Why can you warm your hands by blowing gently and cool your hands by blowing hard Why would a pitcher scuff a baseball Which weighs more a pound of feathers or a pound of iron Let science experts Christopher Jargodzki and Franklin Potter guide you through the curiosities of physics and you'll find the answers to these and hundreds of other quirky conundrums You'll discover why sounds carry well over water especially in the summer how a mouse can be levitated in a magnetic field why backspin is so important when shooting a basketball and whether women are indeed as strong as men With nearly 400 questions and answers on everything from race cars to jumping fleas to vanishing elephants *Mad about Physics* presents a comprehensive collection of braintwisters and paradoxes that will challenge and entertain even the brainiest of science lovers Whether you're a physicist by trade or just want to give your brain a power workout this collection of intriguing and unusual physics challenges will send you on a highly entertaining ride that reveals the relevance of physics in our everyday lives
