Pollner, 2001-01-01 This report examines the existing constraints and opportunities to implement a catastrophe insurance system which can resolve the key obstacles currently impeding broader implementation of a risk funding approach. The four main pillars in such a strategy involve strengthening the insurance sector regulatory requirements and supervision, establishment of broad based pooled catastrophe funding structures with efficient risk transfer tools, promoting public insurance policies linked to programs for loss reduction in the uninsured sectors and strengthening the risk assessment and enforcement of structural measures such as zoning and building code compliance.

Building for Disaster Resilience Gerrit Hayson, The morning of March 11, 2011 began like any other in Sendai, Japan. Office workers filled their morning trains, children walked to school and engineers at the Fukushima Daiichi Nuclear Power Plant monitored their instruments with practiced routine. By afternoon, everything had changed. The Great East Japan Earthquake, registering a magnitude of 9.1, had triggered a tsunami that would forever alter how we think about disaster resilient design. The tsunami waves, reaching heights of over 40 meters in some areas, overwhelmed seawalls that had been considered adequate for centuries. Nuclear reactors designed to withstand the most severe earthquakes imaginable found themselves facing forces that exceeded every calculation. In the aftermath, as the world watched smoke rise from damaged reactor buildings, a sobering truth emerged: even our most sophisticated engineering had failed to anticipate nature's full fury. This catastrophe serves as a stark reminder that disaster resilience is not merely an engineering challenge but a fundamental responsibility that touches every aspect of human civilization. From the homes where families sleep safely to the bridges that connect communities, from the hospitals that save lives to the power plants that energize our modern world, the structures we build must be designed not just for ordinary conditions but for extraordinary ones.
