Structures Under Shock And Impact Vi Hc :

Structures Under Shock and Impact VI Norman Jones, C. A. Brebbia, 2000 Annotation Reflecting the broad range of interest in this extremely active field this book contains contributions originally presented at the sixth international conference on this subject

Structures Under Shock and Impact XII G. Schleyer, C. A. Brebbia, 2013 Of interest to engineers from civil military nuclear offshore aeronautical transportation and other backgrounds this book contains the proceedings of a well established conference on the subject that was first held in 1989 Topics covered include Impact and Blast Loading Characteristics Protection of Structures from Blast Loads Energy Absorbing Issues Structural Crashworthiness Hazard Mitigation and Assessment Behaviour of Steel Structures Behaviour of Structural Concrete Material Response to High Rate Loading Seismic Engineering Applications Interaction Between Computational and Experimental Results Innovative Materials and Material Systems Fluid Structure Interaction The shock and impact behaviour of structures presents challenges to researchers not only because it has obvious time dependent aspects but also because it is difficult to specify the external dynamic loading characteristics and to obtain the full dynamic properties of materials It is crucial that we find ways to share the contributions and understanding that are developing from various theoretical numerical and experimental studies as well as investigations into material properties under dynamic loading conditions This book helps to meet that need

Structures Under Shock and Impact V Norman Jones, 1998 This text covers the structural response to explosive shocks on high and low velocity impacts Topics covered include blast loading of structures penetration mechanics collision mechanics and high speed streaming of material

Blast Protection of Civil Infrastructures and Vehicles Using Composites Nasim Uddin, 2010-03-12 With the upsurge in terrorism in recent years and the possibility of accidental blast threats there is growing interest in manufacturing blast hardened structures and retrofitting blast mitigation materials to existing structures Composites provide the ideal material for blast protection as they can be engineered to give different levels of protection by varying the reinforcements and matrices Part one discusses general technical issues with chapters on topics such as blast threats and types of blast damage processing polymer matrix composites for blast protection standards and specifications for composite blast protection materials high energy absorbing composite materials for blast resistant design modelling the blast response of hybrid laminated composite plates and the response of composite panels to blast wave pressure loadings Part two reviews applications including ceramic matrix composites for ballistic protection of vehicles and personnel using composites to protect military vehicles from mine blasts blast protection of buildings using FRP matrix composites using composites in blast resistant walls for offshore naval and defence related structures using composites to improve the blast resistance of columns in buildings retrofitting using fibre reinforced polymer composites for blast protection of buildings and retrofitting to improve the blast response of concrete masonry walls With its distinguished editor and team of expert contributors Blast protection of civil infrastructures and vehicles using composites is a standard reference

for all those concerned with protecting structures from the effects of blasts in both the civil and military sectors Reviews the role of composites in blast protection with an examination of technical issues applications of composites and ceramic matrix composites Presents numerical examples of simplified blast load computation and an overview of the basics of high explosives includes important properties and physical forms Varying applications of composites for protection are explored including military and non military vehicles and increased resistance in building columns and masonry walls

Engineering Models In High-speed Penetration Mechanics And Their Applications (In 2 Volumes) Gabi Ben-dor, Anatoly Dubinsky, Tov Elperin, 2018-12-28 This two volume 1100 pages 38 chapters book is a significantly expanded revised and updated version of the monograph by the authors published in 2013 Ben Dor G Dubinsky A Elperin T High Speed Penetration Dynamics Engineering Models and Methods Singapore World Scientific Publishing Company The contents increased by 60% the number of titles in bibliography doubled and reached 1600 and the scope covers a range of new topics related to hypervelocity penetration along with high speed impact Presented material is structured into two parts The first part includes description and analysis of practically all known engineering models for calculating high speed penetration of projectiles into concrete metals geological shields adobe and gelatine The second part focuses on the use of approximate models for solving conventional and non standard problems of penetration mechanics including prediction and optimization of protective properties of monolithic and multi layered shields against high speed projectiles and space debris shape optimization of high speed projectiles penetrating into various media modelling of penetration and optimal control of penetrators equipped with jet thrusters and investigation of the efficiency and optimization of segmented projectiles The book includes comprehensive overviews on basic classes of problems in high speed penetration mechanics This is a indispensable reference guide for scientists engineers and students specializing in the field of high speed and hypervelocity penetration mechanics

Scientific and Technical Aerospace Reports, 1995-05 *Structural Engineering, Mechanics and Computation* A. Zingoni, 2001-03-16 Following on from the International Conference on Structural Engineering Mechanics and Computation held in Cape Town in April 2001 this book contains the Proceedings in two volumes There are over 170 papers written by Authors from around 40 countries worldwide The contributions include 6 Keynote Papers and 12 Special Invited Papers In line with the aims of the SEMC 2001 International Conference and as may be seen from the List of Contents the papers cover a wide range of topics under a variety of themes There is a healthy balance between papers of a theoretical nature concerned with various aspects of structural mechanics and computational issues and those of a more practical nature addressing issues of design safety and construction As the contributions in these Proceedings show new and more efficient methods of structural analysis and numerical computation are being explored all the time while exciting structural materials such as glass have recently come onto the scene Research interest in the repair and rehabilitation of existing infrastructure continues to grow particularly in Europe and North America while the challenges to protect human

life and property against the effects of fire earthquakes and other hazards are being addressed through the development of more appropriate design methods for buildings bridges and other engineering structures *Explosive Loading of Engineering Structures* P.S. Bulson,1997-07-24 This book reviews the development of research into the explosive loading of structures mainly since the beginning of the twentieth century Major contributions in the fields of measurement analysis and prediction are discussed Dynamic loading from conventional high explosives is examined as well as the effects of liquid propellant dust gas vapour and fuel air explosions Subjects include blast in tunnels underground and underwater explosions pressure measurement and blast stimulation Explosive effects on civil buildings civil bridges aircraft and ships are summarized including the estimation of residual strength The concluding passages refer to structural safety and reliability

Dynamic Failure of Materials and Structures Arun Shukla,Guruswami Ravichandran,Yapa D.S. Rajapakse,2009-10-20 Dynamic Failure of Materials and Structures discusses the topic of dynamic loadings and their effect on material and structural failure Since dynamic loading problems are very difficult as compared to their static counterpart very little information is currently available about dynamic behavior of materials and structures Topics covered include the response of both metallic as well as polymeric composite materials to blast loading and shock loadings impact loadings and failure of novel materials under more controlled dynamic loads These include response of soft materials that are important in practical use but have very limited information available on their dynamic response Dynamic fragmentation which has re emerged in recent years has also been included Both experimental as well as numerical aspects of material and structural response to dynamic loads are discussed Written by several key experts in the field Dynamic Failure of Materials and Structures will appeal to graduate students and researchers studying dynamic loadings within mechanical and civil engineering as well as in physics and materials science

Computational Ballistics II V. Sánchez-Gálvez,2005 This book features most of the papers presented at the International Conference on Computational Ballistics 2005 The contents stress the importance and possibilities of numerical simulation on internal external and terminal ballistics to describe analyse predict and subsequently reduce the experimental requirements in ballistics

MEMS Linear and Nonlinear Statics and Dynamics Mohammad I. Younis,2011-06-27 MEMS Linear and Nonlinear Statics and Dynamics presents the necessary analytical and computational tools for MEMS designers to model and simulate most known MEMS devices structures and phenomena This book also provides an in depth analysis and treatment of the most common static and dynamic phenomena in MEMS that are encountered by engineers Coverage also includes nonlinear modeling approaches to modeling various MEMS phenomena of a nonlinear nature such as those due to electrostatic forces squeeze film damping and large deflection of structures The book also Includes examples of numerous MEMS devices and structures that require static or dynamic modeling Provides code for programs in Matlab Mathematica and ANSYS for simulating the behavior of MEMS structures Provides real world problems related to the dynamics of MEMS such as dynamics of electrostatically actuated devices stiction and adhesion of microbeams

due to electrostatic and capillary forces MEMS Linear and Nonlinear Statics and Dynamics is an ideal volume for researchers and engineers working in MEMS design and fabrication

The Manson Impact Structure, Iowa Christian Koeberl, Raymond R. Anderson, 1996 Twenty two reports presenting results from the investigation samples of the Manson impact structure a crater site in Iowa that was not discovered until 1992 The reports cover a great deal of ground including geophysical studies of the crater structure detailed mineralogical petrological and ge
