Struggle Over Work Employment Alternatives In Postindustrial Societies:

The Struggle Over Work Shaun Wilson, 2004-07-31 The future of work in advanced industrial democracies is the subject of intense debate and public concern Despite predictions that working hours would fall and leisure time would rise as society progressed the opposite has in fact occurred This new book contains a twofold investigation into the end of work with theoretical and policy angles contributing to the growing research field on the boundaries of economics and sociology

Economic Representations , **Information Technology and Socialist Construction** Daniel E. Saros, 2014-05-09 The failure of command central planning in the twentieth century has led to a general disillusionment within the socialist movement worldwide Some alternatives to capitalism have been proposed since the end of the Cold War but none has offered an alternative form of economic calculation This book explains how modern information technology may be used to implement a new method of economic calculation that could bring an end to capitalism and make socialism possible In this book the author critically examines a number of socialist proposals that have been put forward since the end of the Cold War It is shown that although these proposals have many merits their inability effectively to incorporate the benefits of information technology into their models has limited their ability to solve the problem of socialist construction The final section of the book proposes an entirely new model of socialist development based on a needs profile that makes it possible to convert the needs of large numbers of people into data that can be used as a guide for resource allocation This analysis makes it possible to rethink and carefully specify the conditions necessary for the abolition of capital and consequently the requirements for socialist revolution and ultimately communist society *Information Technology and Socialist Construction* will be of interest to students and scholars of political economy the history of economic thought labour economics and industrial economics *Institutional Economics* Wendell Chaffee Gordon, 1980 El autor expone la filosofia economica

institucionalista como medio adecuado de estudio y resolucion de los problemas economicos actuales *The Core Theory in Economics* Lester Telser, 2012-11-12 An important tenet of game theory core theory has nonetheless been all but ignored by the mainstream Its basic premise is that individuals band together in order to promote their interests as much as possible The return to an individual depends on competition among various coalitions for its membership and a group of people can obtain a joint maximum by suitable coordinated actions In this key title Lester Telser investigates the following issues Markets Multiproduct Industry Total Cost Functions with Avoidable Costs Critical Analyses of Noncooperative Equilibria Through these distinct sections Telser skilfully brings the ideas of core theory to bear on a range of issues within economics with particular emphasis on supply and demand and the way markets function **Risk in International Finance** Vikash Yadav, 2008-03-19 This book analyzes the evolution and impact of the concept of risk on processes of transnational banking and financial market regulation as well as the externalities generated by speculative financial activity in developing and emerging market economies The author provides an alternative theory for the study of international financial market

regulation by applying elements of a post structural methodology to the topic Inspired by Michel Foucault s framework of critical discourse analysis in *The History of Sexuality* the argument dissects the rules of formation that govern the evolving discourse on risk The author argues that the mathematically formal technology of risk emerges from within specific institutions and economic formations thereby limiting its utility in the regulation of global financial markets Exploring how the applied technology of risk has been implicated for fueling a major financial crisis his work also demonstrates how the regulation of global financial markets and abstruse financial instruments in advanced industrialized countries impacts the lives of the poorest people in developing countries and emerging markets

Advances on Income Inequality and Concentration Measures Gianni Betti,Achille Lemmi,2008-04-24 This impressive collection from leading distributional analysts provides an overview of a wide range of economic statistical and sociological relationships The resulting book deserves its place on the bookshelf of serious mathematical economists everywhere

The Core Theory in Economics Lester G. Telser,2007 An important tenet of game theory core theory has nonetheless been all but ignored by the mainstream Its basic premise is that individuals band together in order to promote their interests as much as possible The return to an individual depends on competition among various coalitions for its membership and a group of people can obtain a joint maximum by suitable coordinated actions In this key title Lester Telser investigates the following issues Markets Multiproduct Industry Total Cost Functions with Avoidable Costs Critical Analyses of Noncooperative Equilibria Through these distinct sections Telser skilfully brings the ideas of core theory to bear on a range of issues within economics with particular emphasis on supply and demand and the way markets function

Economics Versus Human Rights Manuel Couret Branco,2008-12-03 In this book Manuel Branco demonstrates that economics is intrinsically opposed to the promotion of human rights in other words it is uncovering economic interests behind the persistent denial of human rights especially economic social and cultural rights

Beyond Mainstream Explanations of the Financial Crisis Ismael Hossein-zadeh,2014-04-16 This book provides a critique of the neoclassical explanations of the 2008 financial collapse of the ensuing long recession and of the neoliberal austerity responses to it The study argues that while the prevailing views of deregulation and financialization as instrumental culprits in the explosion and implosion of the financial bubble are not false they fail to point out that financialization is essentially an indication of an advanced stage of capitalist development These standard explanations tend to ignore the systemic dynamics of the accumulation of finance capital the inherent limits to that accumulation production and division of economic surplus class relations and the balance of social forces that mold economic policy Instead of simply blaming the irrational behavior of market players as neoliberals do or lax public supervision as Keynesians do this book focuses on the core dynamics of capitalist development that not only created the financial bubble but also fostered the irrational behavior of market players and subverted public policy Due to its interdisciplinary perspective this book will be of interest to students and researchers in economics finance politics and sociology

Critical Political

Economy Christian Arnsperger, 2007-12-13 This book asks how a more liberating economics could be constructed and taught. It suggests that if economists today are serious about emancipation and empowerment they will have to radically change their conception about what it means for a citizen to act rationally in a complex society. Arnsperger emphasises that current economics neglects an important aspect of human behaviour. Feminism, Economics and Utopia Karin Schonpflug, 2008-03-26 Answering a range of questions and written by a rising star in feminist economics this book provides explanations of the different kinds of feminism, the evolution of feminist thought and the history and sources of utopias as a theoretical and or literary tool.

Reconstructing Keynesian Macroeconomics Volume 1 Carl Chiarella, Peter Flaschel, Willi Semmler, 2012-03-29 This book represents the first of three volumes offering a complete reinterpretation and restructuring of Keynesian macroeconomics and a detailed investigation of the disequilibrium adjustment processes characterizing the financial, the goods and the labour markets and their interaction. It questions in a radical way the evolution of Keynesian macroeconomics after World War II and focuses on the limitations of the traditional Keynesian approach until it fell apart in the early 1970s as well as the inadequacy of the new consensus in macroeconomics that emerged from the Monetarist critique of Keynesianism. Professors Chiarella, Flaschel and Semmler investigate basic methodological issues, the pitfalls of the Rational Expectations School, important feedback channels in the tradition of Tobin's work and theories of the wage price spiral and the evidences for them. The book uses primarily partial approaches, the integration of which will be the subject of subsequent volumes. With its focus on Keynesian propagation mechanisms, the research in this book provides a unique alternative to the black box shock absorber approaches that dominate modern macroeconomics. Reconstructing Keynesian Macroeconomics should be of interest to students and researchers who want to look at alternatives to the mainstream macrodynamics that emerged from the Monetarist critique of Keynesianism.

Reduction, Rationality and Game Theory in Marxian Economics Bruce Philp, 2004-10-28 The main areas of interest in Marxian economics are examined, paying particular attention to class conflict, analytical Marxism and game theory and will be of interest to a wide variety of economists and social scientists. **Hahn and Economic Methodology** Thomas Boylan, Paschal O'Gorman, 2012-03-15 Hahn on Methodology. The Quest for Understanding addresses two fundamental questions: i) what is distinctive about economic theorising? ii) what is the cognitive value of the outcome of this activity of economic theorising? i.e. economic theory. We will argue that for Hahn economic theorising is distinctive with respect to four dimensions. Firstly, the aim of economic theory is neither to describe nor explain the real economic world as in the physical sciences. Rather, the aim is to achieve objective but non-scientific understanding. Secondly, the central question for economic theory remains for Hahn, how to understand but not to predict as in physics, for instance, how decentralised choices interact and perhaps get co-ordinated. Thirdly, Hahn identifies three commitments without which he argues economic theorising for him is not possible. Finally, economic theorising has a distinctive approach which Hahn calls its grammar of argumentation. The New Economy and Macroeconomic Stability Dario Togati, 2013-03-07 The

past decade has seen many leading economies especially the US undergo profound structural transformations Departing from the standard theories employed to explain this phenomenon here author Togati provides the first broad analysis of the New Economy In this book the first to look at the new economy from a post Keynesian post modern perspective he focuses on its macroeconomic implications presenting a more balanced view than that provided by orthodox neoclassical analysis and studying the interaction of key variables such as information technology globalization the increasing significance of intangibles and financial markets This ground breaking book utilizes a neo modern perspective drawing on complexity theory to advance the study of the stability and dynamic behaviour of economic systems Togati utilizes the Calvino labels to identify new empirical evidence and examines the implications for global stability based on New Classical Macroeconomics and Keynesian theory The analysis developed in this book has important practical and policy implications for the New Economy making this book essential reading for students academics and practitioners in this field Marxian Reproduction Schema

Andrew Trigg,2006-04-18 In this book Andrew Trigg relates Marx s reproduction schema to Keynes s multiplier Leontieff s input output analysis Domar s growth model and Kalecki s principle in the process offering intriguing and innovative clarifications **Freedom and Happiness in Economic Thought and Philosophy** Ragip Ege,Herrade

Igersheim,2012-04-27 Starting from a distinction made by the American philosopher John Rawls in 2000 between two kinds of liberalism liberalism of freedom and liberalism of happiness this book presents a range of articles by economists and philosophers debating the most fundamental aspects of the subject These include the exact significance of Rawls distinction and how it can be related to European political philosophy on the one hand and to utilitarianism on the other hand the various definitions of happiness and freedom and their implications and the informational basis of individual preferences The objectives of the book are twofold first it is devoted to a thorough analysis of the founding texts of both liberalisms It aims to determine the logic of selection of the concepts which these traditions consider as relevant The Kantian pair Reasonable Rational can be seen as the basis on which these concepts are defined our final concern being to reveal the profound relations of complementarity between them we call it reconciliation Secondly we consider a fundamental issue of welfare economics how to appraise individual preferences in light of the Rawlsian distinction It is emphasized that neither a criterion based on liberalism of freedom by itself nor an evaluation in terms of liberalism of happiness by itself exhausts the question of utility One must combine both aspects in order to cope with that issue To do so it is claimed that one can resort to the concept of metaranking of preferences All the contributions included in this book are the outcomes of a collective research project of three years The contributors come from a variety of backgrounds and yet are unified in developing a specific position about freedom and happiness This book should be of interest to those focusing on the history of economic thought as well as moral political and economic philosophy Consumer Capitalism Anastasios Korkotsides,2007-05-07 An excellent addition to Routledge s strong tradition of publishing exceptional books in heterodox economics this innovative and

groundbreaking volume draws on the work of Schumpeter Marx and Sraffa three of the most influential economists of all time It bases value on a single inwardly felt scarcity the scarcity of life which consumers scramble to experience more of through private possession of the product of socially contributed human time space in the form of knowledge embodied in commodities This coercive urge which appears outwardly as commodity fetishism sets the context of utility and self interest implicating consumers in the plunder of each other s toil and of the earth showing that capitalistic growth surveys existential distress rather than welfare Existential motivational uniformity joins the seemingly disparate individualistic pursuits into a race for growth while markets promote variety and innovation Markets assist consumption innovations to blend with Schumpeterian production innovations as consumers try to foresee market conditions and structure their expenditures towards gaining positional advantage These explain the structural dynamics of increased roundaboutness through adjustment of prices and demand to an evolving techno structure A valuable resource this book unfolds a new vision of economic theorizing through the extreme basics of agent behaviour

Full-Spectrum Economics Christian Arnsperger, 2010-01-08 Economics is essential in today s world and yet mainstream economists are increasingly under criticism for not taking into account sufficiently many dimensions of real life such as political and moral values human development spirituality and people s widely shared aspiration to live more liberated lives This book offers a critical assessment of contemporary mainstream economics by showing that the discipline has become much too narrow and misses out on the full spectrum of human existence The book presents a careful detailed analysis of the limitations of neoclassical economics and of its post neoclassical successors behavioral economics neuroeconomics and experimental economics It offers a deconstruction rooted in the Integral philosophy developed over the past three decades by the contemporary American thinker Ken Wilber Distinguishing between exterior and interior dimensions of human existence it suggests that economics could be made into a more inclusive and more emancipatory science if it started to truly honor the genuinely interior aspects of individuals and communities Instead of remaining stuck in the limitations of post neoclassical theory we should make the move toward a new paradigm that in the name of science promotes objectivity as well as subjectivity and material causality as well as existential awareness The result is a highly expanded sense of relevance for economists sociologists and social scientists in general Combining methodologies from systems science brain science ethno methodology and existentialism as well as from the great spiritual traditions of humanity Christian Arnsperger delineates the requirements of a genuinely integral economics beyond today s crippling reductionism
