The Functional and Evolutionary Biology of Primates Russell Tuttle,2017-10-23 These original contributions on the evolution of primates and the techniques for studying the subject cover an enormous range of material and incorporate the work of specialists from many different fields showing the necessity of a multidisciplinary approach to problems of primate morphology and phylogeny Collectively they demonstrate the concerns and methods of leading contemporary workers in this and related fields Each contributor shows his way of attacking fundamental problems of evolutionary primatology

Primate Comparative Anatomy Daniel L. Gebo,2014-10-13 Ideal for college and graduate courses Gebo s book will appeal to researchers in the fields of mammalogy primatology anthropology and paleontology Included in this book are discussions of Phylogeny Adaptation Body size The wet and dry nosed primates Bone biology Musculoskeletal mechanics Strepsirhine and haplorhine heads Primate teeth and diets Necks backs and tails The pelvis and reproduction Locomotion Forelimbs and hindlimbs Hands and feet Grasping toes **The Human Lineage** Matt Cartmill,Fred H. Smith,2009-03-30 This textbook aimed at advanced undergraduates and postgraduates in paleoanthropology courses tackles a rather difficult task that of presenting the substantial body of paleontological genetic geological and archaeological evidence regarding human evolution and the associated scientific history in a logical and readable way without sacrificing either clarity or detail the sheer quality of the writing and explanatory synthesis in this book will undoubtedly make it a valuable resource for students for many years PaleoAnthropology 2010 This book focuses on the last ten million years of human history from the hominoid radiations to the emergence and diversification of modern humanity It draws upon the fossil record to shed light on the key scientific issues principles methods and history in paleoanthropology The book proceeds through the fossil record of human evolution by historical stages representing the acquisition of major human features that explain the success and distinctive properties of modern Homo sapiens Key features Provides thorough coverage of the fossil record and sites with data on key variables such as cranial capacity and body size estimates Offers a balanced critical assessment of the interpretative models explaining pattern in the fossil record Each chapter incorporates a Blind Alley box focusing on once prevalent ideas now rejected such as the arboreal theory seed eating single species hypothesis and Piltdown man Promotes critical thinking by students while allowing instructors flexibility in structuring their teaching Densely illustrated with informative well labelled anatomical drawings and photographs Includes an annotated bibliography for advanced inquiry Written by established leaders in the field providing depth of expertise on evolutionary theory and anatomy through to functional morphology this textbook is essential reading for all advanced undergraduate students and beginning graduate students in biological anthropology

Delisle,2015-07-14 This text the only one of its kind on the market surveys the development of the field of human evolution from its inception through today It provides students with a broad contrast enabling them to fully understand the value and role of current paleoanthropological research Features An historical approach Establishes for students the nature of paleoanthropology through the historical development of the field from 1860 through 2000 and shows students that paleoanthropology is a remarkably progressive field A focus on the debates in the field of human evolution especially the phylogenetic or genealogical debates Analyzes four distinct debates presented separately from their inception to the present 1 Humankind s place among the primates 2 The place of the australopithecines relative to the human line 3 Debates on human phylogeny proper 4 Proposed scenarios of hominization Presentation and analysis of the viewpoints of over 150 scholars Gives students a valuable reference work for the future includes over 1200 references in the bibliography as well as a comprehensive text for today For junior senior courses in Human Evolution and Paleoanthropology in Anthropology departments **The Hunt for the Dawn Monkey** Christopher Beard,2004-12-20 Taking us back roughly 45 million years into the Eocene the dawn of recent life Chris Beard a world renowned expert on the primate fossil record offers a tantalizing new perspective on our deepest evolutionary roots In a fast paced narrative full of vivid stories from the field he reconstructs our extended family tree showing that the first anthropoids the diverse and successful group that includes monkeys apes and humans evolved millions of years earlier than was previously suspected and emerged in Asia rather than Africa In *The Hunt for the Dawn Monkey* Beard chronicles the saga of two centuries of scientific exploration in search of anthropoid origins from the early work of Georges Cuvier the father of paleontology to the latest discoveries in Asia Africa and North America s Rocky Mountains Against this historical backdrop he weaves the story of how his own expeditions have unearthed crucial fossils including the controversial primate *Eosimias* that support his compelling new vision of anthropoid evolution The only book written for a wide audience that explores this remote phase of our own evolutionary history *The Hunt for the Dawn Monkey* adds a fascinating new chapter to our understanding of humanity s relationship to the rest of life on earth *Evolutionary Cell Processes in Primates* M. Kathleen Pitirri,Joan T. Richtsmeier,2021-09-14 Many complex traits define the primate condition including behaviors as fundamental as locomotion and traits as scrutinized as the dentition and their study reveals dramatic evolutionary change across the primates Genetic modifications are at the basis of these changes but transformation of genetic information into phenotypes occurs at the level of the cell which is the focus of this book Contributors summarize novel methodologies to analyze the collective behavior of cells in forming tissues and organs influencing physiological functions and anatomical features that enable behaviors Our goal is to review current knowledge and encourage others to adopt evolutionary cell biology to aid in deciphering the genotype phenotype map that underlies the diversification of primates human variation and

human evolution The contributors to this book utilize advances in genetic analysis and visualization of cells and tissues and merge evolutionary developmental biology with evolutionary cell biology to address questions central to understanding human and primate evolution Key Features Explores mechanisms underlying trait development distribution variation and evolution especially with respect to pigmentation dental formulae the skeleton energetics and temperature related morphological variation Documents the advantages for anthropologists to work at the level of cells focusing on how genes provide instructions for cells to make structure and how environment affects the behavior of cells Illustrates the role cell biology plays in pelage growth and pigmentation facial morphology melanin production in pigmentation dental development and tooth loss and energy expenditure Describes novel methodologies and techniques to analyze environment and temperature related influences on phenotypes Demonstrates how significant changes in life history occur at the level of the cell Related Titles Bianchi L Developmental Neurobiology ISBN 978 0 8153 4482 7 King G R Primate Behavior and Human Origins ISBN 978 1 138 85317 1 Rhys Evans P H The Waterside Ape An Alternate Account of Human Evolution ISBN 978 0 367 14548 4

Phylogeny of the Primates W. Luckett,2012-12-06 The past decade has witnessed a tremendous surge of interest in varied aspects of primate biology encompassing virtually all disciplines of the biological sciences Regardless of whether these

studies have been approached from a paleontological morphological developmental biochemical neuroanatomical or behavioral point of view one underlying theme has been a common interest in the possible phylogenetic relationships suggested by the results of such studies In some cases sound taxonomic principles have not been followed in the interpretation of these data and this has led to skepticism among many taxonomists with regard to the validity of some of the genealogical relationships and conclusions suggested by comparative studies of living primates It is generally agreed that the fossil record alone provides the essential time dimension for directly observing changes in characteristics but unfortunately this record is limited both in the number of genera represented and particularly in the incomplete nature of the available preserved material On the other hand extensive comparative analyses of numerous characteristics in living primates have provided additional insight into possible phylogenetic relationships despite the lack of a time dimension Such studies of both fossil and living primates are enhanced considerably by a cladistic analysis of the probable primitive ancestral or advanced derived condition of each character state discussed based upon their distribution and ontogeny wherever possible in a wide variety of primate and nonprimate taxa including other eutherian mammals marsupials monotremes and reptiles

Mammals of Africa: Volume I Jonathan Kingdon, 2014-11-20 Mammals of Africa MoA is a series of six volumes which describes in detail every currently recognized species of African land mammal This is the first time that such extensive coverage has ever been attempted and the volumes incorporate the very latest information and detailed discussion of the morphology distribution biology and evolution including reference to fossil and molecular data of Africa's mammals With more than 1 160 species and 16 18 orders Africa has the greatest diversity and abundance of mammals in the world The reasons for this and the mechanisms behind their evolution are given special attention in the series Each volume follows the same format with detailed profiles of every species and higher taxa The series includes hundreds of colour illustrations and pencil drawings by Jonathan Kingdon highlighting the morphology and behaviour of the species concerned as well as line drawings of skulls and jaws by Jonathan Kingdon and Meredith Happold Every species also includes a detailed distribution map Edited by Jonathan Kingdon David Happold Tom Butynski Mike Hoffmann Meredith Happold and Jan Kalina and written by more than 350 authors all experts in their fields Mammals of Africa is as comprehensive a compendium of current knowledge as is possible Extensive references alert readers to more detailed information This first volume in the series comprises eight introductory chapters covering topics such as evolution geography and geology biotic zones classification behaviour and morphology The rest of the book is devoted to the Afrotheria a grouping that comprises six orders and 49 species these are the hyraxes elephants manatees otter shrews golden moles sengis elephant shrews and Aardvark
