The Art And Science Of Inventing:

The Art and Science of Inventing Gilbert Kivenson, 2012-12-06 The Independent Inventor Most persons have at some time in their lives invented something perhaps a gadget for making some task easier or a method for increasing the economy of an everyday operation Aside from a certain degree of personal satisfaction the great majority of these inventions have never yielded their creators any amount of real return In many instances the fault has been with the inventor himself who made little or no effort beyond writing down the bright idea In a significant number of cases however the problem has arisen from a general lack of knowledge of what to do about a promising idea The individual who works full time in a non technical job usually has no guidance for proceeding in a logical professional way towards effective development and utilization of his invention Several other factors are responsible for the considerable waste we see in the handling of inventions Perhaps the most significant of these factors is an incomplete awareness of prior art A stenographer dreams up a device to facilitate the distribution of incoming mail She feels that the idea is so simple that others must have patented it long ago and so she goes no further with the concept At the other extreme is the garage mechanic who invents a new type of wrench

How to Make Inventions Edward P. Thompson, 2015-06-26 Excerpt from How to Make Inventions Or Inventing as a Science and an Art a Practical Guide for Inventors The style adopted is that of a lecture and therefore it is hoped that the use of personal pronouns may be overlooked The object in view is to make a mere beginning in the establishment of Inventing as a Science and an Art but especially to present conclusions arrived at in the study of inventors and inventions in order that the capacity of inventors may be enlarged If even a single useful invention results from the perusal of this book I shall feel that the time has not been spent in vain Not knowing how a book with such a title would be accepted preliminary notices were distributed soliciting subscriptions contingent upon publication I am greatly indebted to those who so kindly sent in such subscriptions and especially to those subscribers who wished me success The Electrical World New York I also thank for inserting a series of paid articles on this subject prepared and contributed by me during the year 1884 Much encouragement for continuing the development of the subject matter was given by Mr T Commerford Martin editor of The Electrical Engineer New York and Mr George H Guy editor of Electricity Chicago who so kindly invited me to deliver a lecture upon this subject before the New York Electrical Society in 1890 As may be expected the inventor will in no way be relieved of tedious labor by following any instructions contained in this book I am inclined to believe that this will not be the basis of any criticism which may be rendered by any opponents or prejudiced minds because I have learned and am more and more impressed with what I believe to be a fact that a lazy inventor has never yet been born No day laborer makes as many hours a day The physician missionary and other philanthropists cannot show a better record

for diligence of both the body and the mind In writing this book I have borne this in mind and have felt that there was no danger of making those suggestions and giving that instruction which would be rejected by the inventor simply because much work was involved About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

The Creative Engineer Winston Kock, 2012-12-06 The economic growth and strength of a nation are directly related to the ability of its people to make discoveries and their ability to transform these discoveries into useful products Ninety percent of the increase in output per capita in the United States from 1909 to 1949 has been held to be attributable to technological advances In this book we examine the ways in which a number of important new technologies came into being and review the characteristic traits of inventors who create new technologies Ways are suggested that could enable young and old alike to become more creative and the various benefits they can thereby reap are also discussed A high level of creativity is an important asset for a nation and therefore a knowledge of ways to increase inventiveness can be of great value University of Cincinnati President Warren Bennis has noted that creativity is something most of us seem to lose or let atrophy as we leave childhood To rediscover it he continues we must find ways of re creating our sense of wondering why of heightening even altering our consciousness Thus the earlier in life one seeks to enhance his creativity the more successful the results are likely to be
