Empiricisms Barry Allen, 2021 Empiricisms is about the value of experience and experiments Why do we esteem them and what is their contribution to knowledge The work is unique in the detail with which it explains empiricism from its beginning in ancient medicine to its emergence as a philosophy of modern science It elucidates the ideas of the so called radical empiricists clarifying their relation to historical empiricism and explaining what is radical about them and develops a comparison

between European empiricism and ideas and practice in traditional China Bringing China into the argument is an unexpected innovation and makes the work a model for comparative philosophy

François Blondel Anthony Gerbino, 2012-12-06 First director of the Acad mie royale d architecture Fran ois Blondel established a lasting model for architectural education that helped transform a still largely medieval profession into the one we recognize today Most well known for his 1676 urban plan of Paris Blondel is also celebrated as a mathematician scientist and scholar Few figures are more representative of the close affinity between architecture and the new science of the seventeenth century The first full length study in English to appear on this polymath this book adds to the scholarship on early modern architectural history and particularly on French classicism under Louis XIV and his minister Jean Baptiste Colbert It studies early modern science and technology Baroque court culture and the development of the discipline of architecture

[Irrationality, Transcendence and the Circle-Squaring Problem](#) Eduardo Dorrego López, Elías Fuentes Guillén, 2024-05-02 This publication now in its second edition includes an unabridged and annotated translation of two works by Johann Heinrich Lambert 1728 1777 written in the 1760s *Vorl ufige Kenntnisse f r die so die Quadratur und Rectification des Circuls suchen* and *M moire sur quelques propri t s remarquables des quantit s transcendentes circulaires et logarithmiques* The translations as in the first edition are accompanied by a contextualised study of each of these works and provide an overview of Lambert s contributions showing both the background and the influence of his work In addition by adopting a biographical approach it allows readers to better get to know the scientist himself Lambert was a highly relevant scientist and polymath in his time admired by the likes of Kant who despite having made a wide variety of contributions to different branches of knowledge later faded into an undeserved secondary place with respect to other scientists of the eighteenth century In mathematics in particular he is famous for his research on non Euclidean geometries although he is likely best known for having been the first who proved the irrationality of π In his *M moire* he conducted one of the first studies on hyperbolic functions offered a surprisingly rigorous proof of the irrationality of π established for the first time the modern distinction between algebraic and transcendental numbers and based on such distinction he conjectured the transcendence of π and therefore the impossibility of squaring the circle

[Circles Disturbed](#) Apostolos Doxiadis, Barry Mazur, 2012-03-18 Why narrative is essential to mathematics *Circles Disturbed* brings together important thinkers in mathematics history and philosophy to explore the relationship between mathematics and narrative The book s title recalls

the last words of the great Greek mathematician Archimedes before he was slain by a Roman soldier Don't disturb my circles words that seem to refer to two radically different concerns that of the practical person living in the concrete world of reality and that of the theoretician lost in a world of abstraction Stories and theorems are in a sense the natural languages of these two worlds stories representing the way we act and interact and theorems giving us pure thought distilled from the hustle and bustle of reality Yet though the voices of stories and theorems seem totally different they share profound connections and similarities A book unlike any other *Circles Disturbed* delves into topics such as the way in which historical and biographical narratives shape our understanding of mathematics and mathematicians the development of myths of origins in mathematics the structure and importance of mathematical dreams the role of storytelling in the formation of mathematical intuitions the ways mathematics helps us organize the way we think about narrative structure and much more In addition to the editors the contributors are Amir Alexander David Corfield Peter Galison Timothy Gowers Michael Harris David Herman Federica La Nave G E R Lloyd Uri Margolin Colin McLarty Jan Christoph Meister Arkady Plotnitsky and Bernard Teissier
