The Armstrong Solution:

The Armstrong Solution Jack Eadon, 2003-10-01 **David Armstrong** Stephen Mumford, 2014-12-05 David D M Armstrong is one of Australia's greatest philosophers. His chief philosophical achievement has been the development of a core metaphysical programme embracing the topics of universals, laws, modality and facts, a naturalistic metaphysics consistent with a scientific view of the natural world. It is primarily through his work that Australian philosophy and Australian metaphysics in particular enjoys such a high reputation in the rest of the world. In this book Stephen Mumford offers an introduction to the full range of Armstrong's thought. Mumford begins with a discussion of Armstrong's naturalism, his most general commitment and his realism about universals. He then examines his theories of laws, modality and dispositions which make up the basics of Armstrong's core theory. With this in place Mumford explores his ideas on perception, mind and belief before returning to metaphysics in the last two chapters looking at truth and the new view of instantiation. The book is a dispassionate, fair and unbiased account of Armstrong's thought. Although Armstrong's is a body of work that Mumford regards highly and of real significance, he nevertheless highlights areas of weakness and issues about which there is room for further debate.

Armstrong's Materialist Theory of Mind Peter Anstey, David Braddon-Mitchell, 2021-12-15 A Materialist Theory of Mind 1968 by David Armstrong is one of a handful of texts that began the physicalist revolution in the philosophy of mind It is perhaps the most influential book in the field of the second half of the twentieth century In this volume a distinguished international team of

philosophers examine what we still owe to Armstrong's theory and how to expand it as well as looking back on how it came about. The first four chapters are historical in orientation exploring how the book fits into the history of materialism in the twentieth century. The chapters that follow discuss perception, belief, the supposed explanatory gap between the physical and the mental, introspection, conation, causality and functionalism.

D.M. Armstrong R. Bogdan, 2012-12-06

The aim of this series is to inform both professional philosophers and a larger readership of social and natural scientists, methodologists, mathematicians, students, teachers, publishers etc. about what is going on, who's who and who does what in contemporary philosophy and logic. *PROFILES* is designed to present the research activity and the results of already outstanding personalities and schools and of newly emerging ones in the various fields of philosophy and logic. There are many *Festschrift* volumes dedicated to various philosophers. There is the celebrated *Library of Living Philosophers* edited by P. A. Schilpp whose format influenced the present enterprise. Still they can only cover very little of the contemporary philosophical scene. Faced with a tremendous expansion of philosophical information and with an almost frightening division of labor and increasing specialization, we need systematic and regular ways of keeping track of what happens in the profession. *PROFILES* is intended to perform such a function. Each volume is devoted to one or several philosophers whose views and results are presented and discussed. The profiled philosopher's will summarize and review his/her own work in the main fields of significant contribution. This work will be discussed and evaluated by invited contributors. Relevant historical and/or biographical data, an up-to-date bibliography with short abstracts of the most important works and whenever possible references to significant reviews and discussions will also be included.

Nature, 1897 *Proceedings of the Third World Conference on Floating Solutions* Tomoki Ikoma, Shigeru Tabeta, Soon Heng Lim, Chien Ming Wang, 2024-06-29

This book includes peer-reviewed articles from the Third World Conference on Floating Solutions WCFS 2023 Japan with an aim to pioneer the SDGs and Next SDGs by making the most use of oceans and water. In recent years the safety and security of

people's lives around the world have been threatened by frequent floods and rising sea levels attributable to climate change. The COP 26 has set a common global goal of limiting the temperature rise to 1.5 degrees Celsius above pre-industrial levels. It is an urgent task to cope with climate change as well as to utilize decarbonized and renewable energy. The UN is promoting the SDGs which aim to achieve 17 Goals between 2015 and 2030. However, efforts to reach the Goals will not end in 2030 but will be an ongoing challenge for humanity beyond 2030. Here we tentatively call the Goals to be achieved after the SDGs as Next SDGs. Ocean and water have the potential to provide solutions to the disasters such as flooding and sea level rise due to climate change. In this context, WCFS 2023 presents ocean and water as the urban infrastructure and explores new technology and feasible solutions. In particular, it is necessary to consider urban planning, marine architecture, port planning, connecting land and sea, disaster prevention, renewable energy, and food production on the sea and water. Further, it is indispensable that knowledge, experience, dream, and strong desire to realize these challenges are supported by a diversity of people.

Nature Sir Norman Lockyer, 1897

Public Health Service Publication, 1962

Idealization and the Laws of Nature Billy Wheeler, 2018-08-28 This new study provides a refreshing look at the issue of exceptions and shows that much of the problem stems from a failure to recognize at least two kinds of exception-ridden law: *ceteris paribus* laws and ideal laws. Billy Wheeler offers the first book-length discussion of ideal laws. The key difference between these two kinds of laws concerns the nature of the conditions that need to be satisfied and their epistemological role in the law's formulation and discovery. He presents a Humean-inspired approach that draws heavily on concepts from the information and computing sciences. Specifically, Wheeler argues that laws are best seen as algorithms for compressing empirical data and that ideal laws are needed as lossy compressors for complex data. Major figures in the metaphysics of science receive special attention such as Ronald Giere, Bas van Fraassen, Nancy Cartwright, David Lewis, and Marc Lange. This book is essential reading for philosophers of science and will interest metaphysicians, epistemologists, and others interested in applying concepts from computing to traditional philosophical problems.
