Sinkholes And Subsidence:

Sinkholes and Subsidence Tony Waltham, Fred G. Bell, Martin G. Culshaw, 2005 Sinkholes and Subsidence will provide a twenty first century account of how the various subsidence features in carbonate and evaporite rocks cause problems in development and construction in our living environment The authors consider the various methods used in site investigations both direct and indirect to locate the features associated with these associated hazards and risks highlighting the value of hazard mapping Various ground improvement techniques such as grouting and the special types of foundation structures which deal with these problems are covered towards the end of the book This book is supplemented with a wealth of actual case studies and solutions written by invited experts TOC Introduction Classification and nomenclature Failures in rock collapse and caprock sinkholes Failures in soil subsidence sinkholes Buried sinkholes Induced sinkholes Collapses in basalt lavas Investigation direct methods geophysical methods site characterization hazard maps Engineering and remediation foundations reservoirs dams ground treatment Case histories *Sinkholes and subsidence caused by subsurface erosion* G. Office of Water Data Coordination,1979 **Geomorphological Hazards and Disaster Prevention** Irasema Alcántara-Ayala,Andrew S. Goudie,2010-03-04 Human activities have had a huge impact on the environment and landscape through industrialisation and land use change leading to climate change deforestation desertification land degradation and air and water pollution These impacts are strongly linked to the occurrence of geomorphological hazards such as floods landslides snow avalanches soil erosion and others Geomorphological work includes not only the understanding but the mapping and modelling of Earth s surface processes many of which directly affect human societies In addition geomorphologists are becoming increasingly involved with the dimensions of societal problem solving

through vulnerability analysis hazard and risk assessment and management The work of geomorphologists is therefore of prime importance for disaster prevention An international team of geomorphologists have contributed their expertise to this volume making this a scientifically rigorous work for a wide audience of geomorphologists and other Earth scientists including those involved in environmental science hazard and risk assessment management and policy *Engineering Geology and Construction* Fred G.
