

## COMPARING STRINGS

- In addition to the method `compareTo`, you can use the method `equals` of the class `String`.
- Returns `true` or `false`.

- Example: `str1 = "Hello", str2= "Hi"`

```
str1.equals("Hello");    // returns true
```

```
str1.equals(str2);       //returns false
```

## **Strings Are False:**

**The Strad**, 1896      **Animated Problem Solving** Marco T. Morazán, 2022-01-13 This textbook is about systematic problem solving and systematic reasoning using type driven design There are two problem solving techniques that are emphasized throughout the book divide and conquer and iterative refinement Divide and conquer is the process by which a large problem is broken into two or more smaller problems that are easier to solve and then the solutions for the smaller pieces are combined to create an answer to the problem Iterative refinement is the process by which a solution to a problem is gradually made better like the drafts of an essay Mastering these techniques are essential to becoming a good problem solver and programmer The book is divided in five parts Part I focuses on the basics It starts with how to write expressions and subsequently leads to decision making and functions as the basis for problem solving Part II then introduces compound data of finite size while Part III covers compound data of arbitrary size like e g lists intervals natural numbers and binary trees It also introduces structural recursion a powerful data processing strategy that uses divide and conquer to process data whose size is not fixed Next Part IV delves into abstraction and shows how to eliminate repetitions in solutions to problems It also introduces generic programming which is abstraction over the type of data processed This leads to the realization that functions are data and perhaps more surprising that data are functions which in turn naturally leads to object oriented programming Part V introduces distributed programming i e using multiple computers to solve a problem This book promises that by the end of it readers will have designed and implemented a multiplayer video game that they can play with their friends over the internet To achieve this however there is a lot about problem solving and programming that must be learned first The game is developed using iterative refinement The reader learns step by step about programming and how to apply new knowledge to develop increasingly better versions of the video game This way readers practice modern trends that are likely to be common throughout a professional career and beyond      **Introduction to Environmental Data Science** Jerry Davis, 2023-03-13 Introduction to Environmental Data Science focuses on data science methods in the R language applied to environmental research with sections on exploratory data analysis in R including data abstraction transformation and visualization spatial data analysis in vector and raster models statistics and modelling ranging from exploratory to modelling considering confirmatory statistics and extending to machine learning models time series analysis focusing especially on carbon and micrometeorological flux and communication Introduction to Environmental Data Science is an ideal textbook to teach undergraduate to graduate level students in environmental science environmental studies geography earth science and biology but can also serve as a reference for environmental professionals working in consulting NGOs and government agencies at the local state federal and international levels Features Gives thorough consideration of the needs for environmental research in both spatial and temporal domains Features examples of applications involving field collected data ranging from individual observations to data logging Includes examples also of applications involving government and NGO

sources ranging from satellite imagery to environmental data collected by regulators such as EPA Contains class tested exercises in all chapters other than case studies Solutions manual available for instructors All examples and exercises make use of a GitHub package for functions and especially data *Tests and Measurements in Music* Jacob Kwalwasser,1927
