Miescher,2012-12-06 Activation of the complement system gives rise to a number of molecular species which can interact with host derived cells and regulate their function This interaction is mediated through distinct cell surface complement receptors and receptor engagement produces biologic responses which can either modulate host defense reactions or enhance inflammation Although the first complement receptor was recognized more than 30 years ago 80J detailed biochemical information concerning the receptors has only recently become available Currently eight distinct complement receptors are recognized Five receptors CRI CR2 CR3 C3a receptor and C3e receptor react with various regions on C3 while the other receptors display specificity for Clq C5a or Factor H This chapter focusses on the chemistry of the various ligands and receptors and discusses the biologic activities which arise as a result of receptor ligand interaction II Clq Receptor A The Ligand Clq is the recognition molecule of the classical complement pathway reviewed in 20 130 In serum it is part of a calcium dependent penta molecular complex containing one molecule ofClq and two molecules each of the pro enzymes Clr and CIs During classical pathway activation the macromolecular complex becomes associated with the activator through the Clq subcomponent Bound Clq undergoes a conformational change and induces the proteolytic autoactivation of

Clr which in turn effects the proteolytic activation of CIs This process is controlled by the Cl inhibitor CIINH which binds irreversibly to activated Clr and CIs and inhibits their enzymatic activities
