Long, Michael J. Lynch, Paul B. Stretesky, 2023-06-01 This innovative Handbook provides a comprehensive treatment of the complex relationship between inequality and the environment and illustrates the myriad ways in which they intersect. Featuring over 30 contributions from leading experts in the field, it explores the ways in which inequality impacts three of the most pressing contemporary environmental issues: climate change, natural resource extraction, and food insecurity.

Critical Perspectives on Politics and the Environment Rick Adair, 2006-07-15 Essays discuss the relationship between politics and environmentalism, including methods proposed and those used to solve environmental problems, how regulation has changed over the years, and how trade affects the environment.

Africa, Tropical Timber, Turfs, and Trade J. Henry Owusu, 2012-08-20 This book examines development issues, particularly spatial integration in Sub-Saharan Africa, regarding its tropical timber trade and the related formal and informal operational turf creation, control, and dynamics. Focusing primarily on Ghana, Owusu examines the scramble to control the timber trade by various political and socio-economic interests from the colonial to the neo-liberal era. In relation to this, Owusu documents the structural and organizational changes that have occurred in the region resulting from national and international development policies such as modernization and neo-liberal structural adjustment on industrialization and development, and assesses the roles played by powerful international organizations such as The World Bank as agents of economic change. The discussion is couched in the critical but often unrecognized or neglected role of the discipline of geography and its associated perspectives in relation to examining and understanding the unequal relationship between the advanced and developing economies and how that relationship affects development and trade behavior of developing economies. The core argument made regarding this relationship is tied to the structuralist perspective that Africa's persistent underdevelopment problem is rooted in the very structure of its political economy. Based on the discussion, Owusu identifies and distills lessons from Ghana's experience for development policy and practice in Africa and comparable developing countries in the 21st Century.

Policy Reform for Sustainable Development in the Caribbean Michele Garrity, Louis A. Picard, 1996 The Caribbean countries and many other Third World countries in Latin America, Asia, and Africa have been under the yoke of structural adjustment measures for more than a decade. Numerous studies have addressed the inequality of North-South relations, the lack of transparency in negotiations that have led to the signature of agreements, the absence of a clear definition of responsibilities of the parties engaged, the inadequacy and inadaptation of policies with regard to the socio-cultural context, and especially the refusal to take into account the social demands of the most deprived. The criticisms formulated in this book can only find a beginning of solutions by the setting up of a solid administrative organization in which the public officials are made accountable and who, once aware of the national and international stakes, can confront the constraints involved in State international negotiation relations. The book is a very rich presentation of the concept and the

problems of structural adjustment and institutional development in the developing countries. Beside the impressive introduction and the convincing conclusion, the articles on these prerequisites for institutional sustainability present the most important empirical research results. The contents is a clear description of problems, failures and results in institutional reforms.

Greening International Institutions Jacob Werksmann, 2017-09-25. Environmentally sustainable development has become one of the world's most urgent priorities. But countries cannot achieve it alone; it depends on international coordination and action. Greening International Institutions, the latest in a series of highly acclaimed publications devoted to environmental and developmental law, assesses how far and how successfully intergovernmental organizations have responded to the challenge. The organizations analyzed include the UN General Assembly, the new Commission for Sustainable Development, UNEP, UNDP and UNCTAD, WTO, GATT, NAFTA, the Bretton Woods institutions and several regional bodies as well as treaty bodies and the mechanisms for avoiding and settling disputes. For each, the contributors provide an accessible overview of the organization's mandate and structure, examine substantive policy initiatives and assess the need and scope for procedural and institutional reform. Drawing together a collection of essays by lawyers and researchers from various backgrounds, Greening International Institutions is stimulating reading for students and policy makers as well as anyone concerned with the development of international institutions. Jacob Werksman is an attorney, a Programme Director at FIELD and Visiting Lecturer in International Economic Law at the University of London. Greening International Institutions is the fifth volume in the International Law and Sustainable Development series, co-developed with FIELD. The series aims to address and define the major legal issues associated with sustainable development and to contribute to the progressive development of international law. Other titles in the series are Greening International Law: Interpreting the Precautionary Principle, Property Rights in the Defence of Nature and Improving Compliance with International Environmental Law. A legal parallel to the Blueprint series, welcome, timely and provocative. David Pearce. Originally published in 1996.
