Flexible Query Answering Systems Henrik L. Larsen, Januss Kacprzyk, Slawomir Zadrozny, Troels Andreassen, Henning Christiansen, 2012-08-27 This volume constitutes the proceedings of the Fourth International Conference on Flexible Query Answering Systems FQAS 2000 held in Warsaw Poland on October 25 28 2000 The FQAS conference has been the premier conference focusing on one of key issues that the information society faces namely that of providing easy flexible intuitive access to information for everybody In targeting this issue the conference draws on several research areas such as databases querying information retrieval knowledge representation soft computing cyberspace multimedia systems human computer interaction etc FQAS 2000 has been preceded by the extremely successful FQAS 94 FQAS 96 and FQAS 98 conferences all held in Roskilde Denmark The present conference provides a unique opportunity for researchers developers and practitioners to explore new ideas and approaches in a multidisciplinary forum As a metaphor for flexible query answering we may consider a human intermediary who has expertise in the topic of the query and is experienced in identifying the user's information needs and answering the needs

from the available information resources The use of knowledge on relevant contexts available information resources etc enables the expert to respond rather precisely to the needs though the query per se may be imprecise incomplete etc Thus a key issue for flexible query answering system is to obtain maintain represent and utilize such knowledge This comprises domain knowledge and metaknowledge its representation and organization in ontologies terminologies etc

High-Temperature Measurements of Materials Hiroyuki Fukuyama, Yoshio Waseda, 2008-12-28 A variety of industries information technology aerospace automobile and basic and new materials manufacturing need technological innovations which bring high value added and high quality products at low cost not only because of global competition but also because of the perspective of environmental consciousness and regulation Thermophysical properties of high temperature melts are indispensable for numerical simulations of material processes such as semiconductor and optical crystal growth of the melt and casting of super high temperature alloys for jet engine turbine blades in addition to welding in automobile manufacturing Recent developments in process modeling provide 3D unsteady analysis of melt convection temperature and heat flux distribution which enables us to predict product quality In fact 3D process visualization using computer modeling helps us to understand complicated phenomena occurring in the melt and to control the process Accurate data are necessary to improve the modeling which collectively engenders high quality products However crucial obstacles render measurements of thermophysical properties difficult at elevated temperatures because of high chemical reactivity and fluidity of melts Substantial and persistent challenges have been made to ascertain the precise thermophysical properties of high temperature melts This book describes the new techniques and latest developments in the measurements of atomic structure density surface tension viscosity heat capacity thermal and mass diffusivity thermal conductivity emissivity and electrical conductivity of high temperature melts In addition to up to date improvements in conventional techniques some new attempts are introduced to open a new scientific field that is physics of high temperature melts
