Structural Geology And Personal Computers Computer Methods In The Geosciences Paperback:

Structural Geology and Personal Computers D.G. De Paor, 1996-12-17 This book will help structural geologists keep abreast of rapid changes in work practices resulting from the personal computer revolution. It is organized into six parts: I Computer Aided Learning, II Microstructural Analysis, III Analysis of Orientation Data, IV Strain and Kinematic Analysis, V Mathematical and Physical Modeling, VI Structural Mapping and GIS. The 45 contributing authors explain how to set up computer aided teaching and learning facilities on a low budget, illustrate tectonic strain concepts with a drawing program, integrate multimedia presentations into structural coursework, analyze microstructures with computer aided microscopy, produce sophisticated stereonet software for both the Mac and IBM PC, evaluate orientation data using a spreadsheet program, model the development of macrostructures and microstructures numerically, integrate structural and geophysical data, and apply PC technology to the production of structural maps, cross sections, and block diagrams. The editor's own contributions reveal the inner workings of his renowned structural research applications, which are used in hundreds of universities worldwide. Commercial and non-commercial applications of particular interest to structural geologists are reviewed. This volume will prove an invaluable resource for professors, instructors, and research students, as well as research scientists in the public services and exploration industries. If you are such a person, have you lectured with the aid of a gyroscopic mouse? Or used Brier curves to model heterogeneous deformation? Or analyzed a fold structure using a digital terrain model? If not, you'll need to rush out and buy this book before the next wave of new technology hits. Forthcoming Books Rose Arny, 1998 *The Cumulative Book Index*, 1997 A world list of books in the English language American Book Publishing Record, 1997 **Geological Prior Information** Andrew Curtis, Rachel Wood, 2004 Geological prior information represents a new and emerging field within the geosciences. Prior information is the term used to describe previously existing knowledge that can be brought to bear on a new problem. This volume describes a range of methods that can be used to find solutions to practical and theoretical problems using geological prior information and the nature of geological information that can be so employed. 3D, 4D and Predictive Modelling of Major Mineral Belts in Europe Pär Weihed, 2015-07-24 This book presents the results of the major EU project Promine. For the first time, there is now a European database available on mineral deposits, as well as 3D, 4D, and predictive models of major mineral belts in Europe: Fennoscandia, Skellefte, and Vihanti. Pyhäsalmen, the Fore-Sudetic basin, Kupferschiefer deposits in Poland and Germany, the Hellenic belt in northern Greece, and the Iberian Pyrite belt and Ossa-Morena zone in Spain and Portugal. The book also describes the modelling techniques applied and how different types of software are used for three and four dimensional modelling. Furthermore, fundamental descriptions of how to build the database structure of three dimensional geological data are provided, and both 2D and 3D predictive models are presented for the main mineral belts of Europe. *Geophysics Today* Sergey Fomel, 2010 In celebration of the 75th year of publication, the Geophysics editorial team invited a collection of papers written by well

recognized experts in various areas of exploration geophysics These invited papers not only form part of the present book but they also appear in the September October 2010 special section of the journal Geophysics Today A Survey of the Field as the Journal Celebrates its 75th Anniversary complements this special section with an additional group of papers drawn from Geophysics to address areas beyond the invited articles The result is a snapshot of the state of the art in the field as Geophysics passes its three quarter century mark This book is Geophysical References Series No 16
