**Impact Engineering** M. Macaulay, 2012-12-06 We are all familiar with impact Lesser impacts such as hammering a nail cracking an egg or stubbing a toe are part of everyday life More violent impacts such as those caused by car crashes or bullets are fortunately less common but are still well enough known to be taken for granted Very violent impacts such as meteorites striking the earth are outside our personal experience but we are aware of them Despite this impacts remain mysterious They occur too quickly for us to follow what is happening and the evidence they leave behind is often ambiguous Over the last thirty years improvements in high speed instrumentation and developments in computing have made them more comprehensible and an increasing amount of attention is being paid to the subject which is an area of expanding scientific and engineering research A multi disciplinary approach is not yet established and information is scattered in many places and expressed in a variety of jargons In applied mathematics impacts have provided interesting theoretical problems with elegant solutions but it has been difficult to check results experimentally Impacts can change the behaviour of materials but similar changes can sometimes be produced in other ways and the underlying mechanisms are not clear Empirical solutions to engineering problems have worked reasonably well but it is hard to know what to do if things go wrong

### **IUTAM Symposium on Impact Biomechanics: From Fundamental Insights to Applications** M. D.

Gilchrist, 2005-10-13 Substantial fundamental work has been undertaken in the different aspects of impact biomechanics over the past three decades Much of this has been motivated and undertaken by the automotive industry in their efforts to improve transport safety More recently however it has become apparent that the multidisciplinary synergies which are realised by interactions between engineers scientists and clinical practitioners will ultimately lead to a greater understanding of the complex interacting phenomena within the human body after it has sustained an impact In turn this greater depth of knowledge will provide more fundamental insights into the analysis diagnosis treatment and prevention of impact injuries across a broader spectrum of accident environments The scientific focus of this IUTAM symposium is to address those topics that are centrally important to the biomechanics of impact These can be grouped into those that are concerned with the different causes of accidents e.g transport occupational and sports injuries the mechanics involved in accident analysis e.g accident investigation computational modelling techniques the different types of resulting traumatic injuries including musculoskeletal organ spinal and head injuries methods of assessing the extent of injury e.g injury assessment injury criteria constitutive laws for human tissue and providing protection during an impact e.g injury prevention energy absorption materials and safety devices      Introduction to Hydrocodes Jonas Zukas, 2004-01-20 A hydrocode refers to a computer program used for the

study of the dynamic response of materials and structures to impulse primary blast impact involving everything from car and aircraft collisions to impacts of space structures by assorted debris The understanding of hydrocodes requires knowledge of numerical methods in the code as well as a keen understanding of the physics of the problem being addressed This can take many years to learn via codes There are currently a number of titles addressing the physics of high pressure and high rate material but nothing introducing the novice to the fundamentals of this highly technical and complicated study Introduction to Hydrocodes bridges the gap bringing together the large body of literature scattered through diverse journals government and corporate reports and conference proceedings As valuable as the text are the cited references and the combination will take years off the preparation time of future code users Introduces complex physics essential for the understanding of hydrocodes Infused with over 30 years practical experience in the field Brings together a wide range of literature saving valuable research time
