Kroto,J.E. Fischer,Deann Cox,2012-12-02 Until recently the element carbon was believed to exhibit only two main allotropic forms diamond and graphite Research in the US and Europe has now confirmed the existence of a third previously unknown form buckminsterfullerene C60 and its relatives the fullerenes C24 C28 C32 C70 etc The story of fullerene chemistry physics and materials science began in 1985 almost twenty years after the existence of a spherical carbon cluster was first considered In September 1985 a joint Sussex Rice Universities team including Kroto Heath O'Brien Curl and Smalley used a powerful mass spectrometric technique to identify the C 60 species and proposed a spherical structure and the name buckminsterfullerene It was not however until Kratschmer and Huffman reported the isolation of crystals of C60 in 1990 that the closed cage structure of C60 could be confirmed The Fullerenes documents the work leading up to 1990 and more recent developments in the field of fullerene research and will serve as an indispensable reference tool for all workers in this area **Abstracts of Papers Presented at the XXXVI Cold Spring**

Strasser,2019-06-07 Databases have revolutionized nearly every aspect of our lives Information of all sorts is being collected on a massive scale from Google to Facebook and well beyond But as the amount of information in databases explodes we are forced to reassess our ideas about what knowledge is how it is produced to whom it belongs and who can be credited for producing it Every scientist working today draws on databases to produce scientific knowledge Databases have become more common than microscopes voltmeters and test tubes and the increasing amount of data has led to major changes in research practices and profound reflections on the proper professional roles of data producers collectors curators and analysts Collecting Experiments traces the development and use of data collections especially in the experimental life sciences from the early twentieth century to the present It shows that the current revolution is best understood as the coming together of two older ways of knowing collecting and experimenting the museum and the laboratory Ultimately Bruno J Strasser argues that by serving as knowledge repositories as well as indispensable tools for producing new knowledge these databases function as digital museums for the twenty first century **Grants and Awards for the Fiscal Year Ended ...** National Science Foundation (U.S.),1971 **AEC Technical Information Bulletin** ,1971-08 *Research Awards Index* ,1982 **Research Grants Index** National Institutes of Health (U.S.). Transition States of Biochemical Processes R. Gandour,2013-06-29 The transition state theory has been from the point of its inception the most influential principle in the development of our knowledge of reaction mechanisms in solution It is natural that as the field of biochemical dynamics has achieved new levels of refinement its students have increasingly

adopted the concepts and methods of transition state theory. Indeed every dynamical problem of biochemistry finds its most elegant and economical statement in the terms of this theory. Enzyme catalytic power for example derives from the interaction of enzyme and substrate structures in the transition state so that an understanding of this power must grow from a knowledge of these structures and interactions. Similarly transition state interactions and the way in which they change as protein structure is altered constitute the pivotal feature upon which molecular evolution must turn. The complete coupled dynamical system of the organism incorporating the transport of matter and energy as well as local chemical processes will eventually have to yield to a description of its component transition state structures and their energetic response characteristics even if the form of the description goes beyond present day transition state theory. Finally the importance of biochemical effectors in medicine and agriculture carries the subject into the world of practical affairs in the use of transition state information for the construction of ultra potent biological agents.
