Structure and Physiology of the Slow Inward Calcium Channel J. Craig Venter, D. J. Triggle, 1987 *The Calcium Channel: Structure, Function and Implications* Martin Morad, Winifred G. Nayler, Stanislav Kazda, Matthias Schramm, 2012-12-06 This is the first book to summarize experimental results from the new rapidly expanding field of research into the calcium channel in cell membrane Calcium is an ubiquitous messenger of various cellular functions Its fundamental role in the regulation of cardiac contractions has long been recognized Drugs counteracting some actions of calcium ions namely calcium antagonists have since become essential to research In the last decade it has been established that calcium ions reach their target intracellular system by passing through specialized calcium channels in the membrane Recently improved experimental techniques combined with the discovery of highly specific Ca channel ligands have dramatically enlarged our knowledge of the molecular structure and function of such channels The contributions by leading world specialists shed new light on both basic science and possible clinical implications for cardiovascular pharmacology endocrinology and neuropharmacology **Structure and Physiology of the Slow Inward Calcium Channel** J. Craig Venter, 1987-01-01 **Calcium Channels** L. Donald Partridge, John K. Leach, 1991-07-03 The most comprehensive compendium of information available on calcium channels Calcium channels are a common component of the membranes of a wide range of excitable cells and their presence is crucial to the functioning of these cells This book presents a current review of the biophysics physiology pharmacology and clinical role of calcium channels Chapters discussing the biophysics of calcium channels include topics in ion permeation channel activation channel inactivation and second messenger modulation The chapters on physiology cover excitation contraction coupling excitation secretion coupling sensory transduction regulation of electrical activity and the regulation of cell growth and development Issues discussed in the pharmacology chapters of the book include the effects of permeant and inhibitory inorganic ions blocking and activating effects of organic ions and the regulatory effects of naturally occurring compounds The chapters exploring the clinical aspects of calcium channels examine topics such as the modulation of calcium channels in the treatment of ischemic heart disease cardiomyopathies hypertension cardiac arrhythmias peripheral vascular diseases platelet related disorders neurological disorders and psychiatric disorders Physicians neuroscientists and pharmacologists should consider this book essential to their reference collections Calcium Regulation of Cellular Function, 2000-04-01 Volume 30 examines the prominent role of calcium as an intracellular second messenger Leading investigators review a wide variety of studies on how calcium enters and moves through cells how it interacts with its many binding proteins and how calcium and its intracellular receptor calmodulin control vital cellular processes Coverage includes a detailed analysis of the mechanisms by which calcium bound to calmodulin regulates contractile proteins in smooth muscle cells Close attention is given to the roles of calcium and calmodulin dependent protein kinases and phosphatases in synaptic signal transduction protein synthesis gene expression

programmed cell death activation of T lymphocytes and control of cell division cycles Other chapters discuss studies using genetically manipulable nonmammalian organisms to further probe the functions of calcium and calmodulin

Current Topics in Membranes and Transport, 1989-01-01 Current Topics in Membranes and Transport *Ion Channels and Ion Pumps* Piero P. Foa, Mary F. Walsh, 2013-03-07

Omnis cellula e cellula every cell from a cell was dogma to the 19th century cellular physiologist and the cornerstone of Virchow's Cellular pathology Spread out a cell into a layer and you will find that in ceasing to be a cell it has ceased to act as such wrote the British 1 physiologist G R Lewes more than a century ago The cell remains vital as long as its wall remains intact keeping its content pure and clear and thus preserving the vital principle within echoed Claude 2 Bernard a few years later The notion of the cell membrane as a protecting envelope held sway until it became clear that it could not account for the coalescence of poorly differentiated embryonic vesicles and for their transformation into cell like structures capable of auto regulation and yet subject to what the grandfather of one of us defined as the federal obligations imposed by the whole organism 3 A new concept was needed and soon the membrane was described as a structure capable of uniting as well as separating adjacent cells Morphologic evidence for this dual function was obtained several years later when the electron microscope revealed the existence of tight and gap junctions which acting as intercellular bonds and channels allowed the cells to communicate with one another and thus coordinate their biologic activities

Excitation-Contraction Coupling in Skeletal, Cardiac, and Smooth Muscle George B. Frank, C. Paul Bianchi, Henk Keurs, 2012-12-06 The Third International Symposium on Excitation Contraction Coupling in Skeletal Cardiac and Smooth Muscle organized by George Frank C Paul Bianchi and Henk E DJ ter Keurs was held in Banff Centre Banff Alberta Canada during June 26 to June 30 1991 The theme of these symposia has been to recognize the similarities and dissimilarities of excitation contraction coupling in skeletal cardiac and smooth muscle Cross fertilization of concepts of excitation contraction coupling in these three types of muscle has occurred since the early studies in the late fifties and early sixties on skeletal muscle Investigators in each field meet only at specialized symposia which exclude investigators in the other fields The purpose of the symposia has been to bring together international investigators studying excitation contraction coupling in skeletal cardiac and smooth muscle so that we may learn from each other and hence provide a more global concept of excitation contraction The Third International Symposia has accomplished its objective as we recognize that calcium channels of the sarcolemma and the sarcoplasmic reticulum play key essential roles in excitation contraction coupling in all three types of muscles In skeletal muscle the recognition that E C coupling consists of two parallel mechanisms one dependent upon a dihydropyridine voltage sensitive sensors coupled to calcium release from the terminal cisternae via the ryanodine sensitive channel in the foot structure of the triad
