*Mechcomp2* Antonio J.M. Ferreira, Ana M.A. Neves, Erasmo Viola, Francesco Tornabene, Nicholas Fantuzzi, 2016-05-20. Composites materials have aroused a great interest over the last few decades. Several applications of fibrous composites, functionally graded materials, laminated composites, nano structured reinforcements, morphing structures can be found in many engineering fields such as aerospace, mechanical, naval and civil engineering. The necessity of lightweight structures, smart and adaptive systems, high level strength have led both the academic research and the manufacturing development to a recurring employment of these materials. Many journal papers and technical notes have been published extensively over the last seventy years in international scientific journals of different engineering fields. For this reason, the establishment of this second edition of Mechanics of Composites International Conference has appeared appropriate to continue what has been begun during the first edition, which occurred in 2014 at Stony Brook University, USA. MECHCOMP wants to be an occasion for many researchers from each part of the globe to meet and discuss about the recent advancements regarding the use of composite structures. As a proof of this event, which has taken place in Porto, Portugal, selected plenary and key note lectures have been collected in the present book.

*The School of Mathematics at Rome's University Campus* Simona Salvo, 2022-09-28. The School of Mathematics is a masterpiece of the early 1930s by Gio Ponti, who is today regarded as a master of Italian Modernism. Although World War II bombings shattered the coloured stained glass window that once adorned the balanced and harmonious white travertine facade, the building remains

a striking and significant piece of architecture Although it underwent a series of transformations over the years before its historical and artistic relevance was recognised it can still be appreciated and admired for its magnificent expressivity Its uniqueness derives from its complexity such as is often found in Italian monuments of all ages a rare synthesis of urban design architecture art industrial design historical archives and perhaps the first of its kind scientific production in the field of mathematics This illustrated report is a synopsis of the extensive technical research documents produced by the research team for each step of the work It is also a premise for the conservation management plan proposed at the end of the full report As in any area of science knowledge is at the basis of future action we need to understand today how to take care of the historical buildings of our campus tomorrow buildings recognised worldwide as architectural and historical monuments
