The Geometry of Meaning Peter Gardenfors, 2017-02-24 A novel cognitive theory of semantics that proposes that the meanings of words can be described in terms of geometric structures In The Geometry of Meaning Peter G rdenfors proposes a theory of semantics that bridges cognitive science and linguistics and shows how theories of cognitive processes in particular concept formation can be exploited in a general semantic model He argues that our minds organize the information involved in communicative acts in a format that can be modeled in geometric or topological terms in what he terms conceptual spaces extending the theory he presented in an earlier book by that name Many semantic theories consider the meanings of words as relatively stable and independent of the communicative context G rdenfors focuses instead on how various forms of communication establish a system of meanings that becomes shared between interlocutors He argues that these meetings of mind depend on the

underlying geometric structures and that these structures facilitate language learning Turning to lexical semantics G rdenfors argues that a unified theory of word meaning can be developed by using conceptual spaces He shows that the meaning of different word classes can be given a cognitive grounding and offers semantic analyses of nouns adjectives verbs and prepositions He also presents models of how the meanings of words are composed to form new meanings and of the basic semantic role of sentences Finally he considers the future implications of his theory for robot semantics and the Semantic Web

Creativity and the Agile Mind Tony Veale, Kurt Feyaerts, Charles Forceville, 2013-05-28 Creativity is a highly prized quality in any modern endeavor whether artistic scientific or professional Though a much studied subject and the topic of a great many case studies the field of creativity research is still very much an open one Creativity remains a field where absolute definitions hold very little water and where true insight can only emerge when we properly appreciate from a nuanced multi disciplinary perspective the crucial distinction between the producer's perspective and the consumer's perspective Theories that afford us a critical appreciation of a creative work do not similarly afford an explanatory insight into the origins and development of the work As researchers we must approach creativity both as producers to consider the vast search spaces that a producer encounters and to appreciate the need for heuristic strategies for negotiating this space and as consumers to appreciate the levels of shared knowledge foreground and background that is exploited by the producer to achieve a knowingly creative effect in the mind of the consumer This volume thus brings together both producers and consumers in a cross disciplinary exploration of this complex many faceted phenomenon
