*Argument Structure:* James B. Freeman, 2011-03-23 This monograph first presents a method of diagramming argument macrostructure synthesizing the standard circle and arrow approach with the Toulmin model A theoretical

justification of this method through a dialectical understanding of argument a critical examination of Toulmin on warrants a thorough discussion of the linked convergent distinction and an account of the proper reconstruction of enthymemes follows

I. M. Schlesinger, Tamar Keren-Portnoy, Tamar Parush, 2001-01-01 An important tool for scientific study in any field is a formal language in which the phenomena can be described and hypotheses formulated In this book a formal notation is developed for the description of the cognitive structure of arguments The analyses based on this notation are more fine grained than the analyses in previous attempts and they are applicable not only to arguments but to all types of moves in a discourse Further the notational system provides a basis for the description of relations between arguments and the structure of the discourse as a whole In the final chapter some empirical studies of retention of arguments in memory and of pre writing are reported based on hypotheses formulated in terms of the notational system      Aspects of Argument

Structure Acquisition in Inuktitut Shanley Allen, 1996-11-22 This book discusses the first language acquisition of three morphosyntactic mechanisms of transitivity alternation in arctic Quebec Inuktitut Data derive from naturalistic longitudinal spontaneous speech samples collected over a nine month period from four Inuit children Both basic and advanced forms of passive structures are shown to be used productively by Inuktitut speaking children at an early age relative to English speaking children but consistent in age with speakers of non Indo European languages reported on in the literature potential explanations of this difference include frequency of caregiver input and details of language structure Morphological causatives appear slightly later in the acquisition sequence and their first instances reflect use of unanalyzed routines Lexical causatives are present from the earliest ages studied Evidence of a period of overgeneralization of lexical causatives in one subject at the same time as the morphological causative shows signs of being productively acquired suggests that the seeming overgeneralization may reflect nothing more than as yet unstable use of the morphological causative Noun incorporation structures are shown to be used productively by Inuktitut speaking children at an early age relative to Mohawk speaking children potential explanations of this difference include details of language structure and relative language use in the environments of the learners Findings are considered in light of current debates in the literature concerning continuity versus maturation of grammatical structure and concerning the functional categories available to the child at early stages of acquisition Data presented argue against late maturation and suggest that all functional categories may be accessed by the Inuktitut speaking child early in the acquisition process      **The Essential Guide to Building Your Argument** Dave

Preferred Argument Structure John W. Du Bois, Lorraine Edith Kumpf, William J. Ashby, 2003-01-01 Preferred Argument Structure offers a profound insight into the relationship between language use and grammatical structure In his original publication on Preferred Argument Structure Du Bois 1987 demonstrated the power of this perspective by using it to explain the origins of ergativity and ergative marking systems Since this work the general applicability of Preferred Argument Structure has been demonstrated in studies of language after language In this collection the authors move beyond verifying Preferred Argument Structure as a property of a given language They use the methodology to reveal more subtle aspects of the patterns for example to look across languages diachronically or synchronically to examine particular grammatical relations and to examine special populations or particular genres This volume will appeal to linguists interested in the relationship of pragmatics and grammar generally in the typology of grammatical relations and in explanations derived from data and corpus based approaches to analysis

**A lexicalist account of argument structure** Stefan Müller, 2018 There are two prominent schools in linguistics Minimalism Chomsky and Construction Grammar Goldberg Tomasello Minimalism comes with the claim that our linguistic capabilities consist of an abstract binary combinatorial operation Merge and a lexicon Most versions of Construction Grammar assume that language consists of flat phrasal schemata that contribute their own meaning and may license additional arguments This book examines a variant of Lexical Functional Grammar which is lexical in principle but was augmented by tools that allow for the description of phrasal constructions in the Construction Grammar sense These new tools include templates that can be used to model inheritance hierarchies and a resource driven semantics The resource driven semantics makes it possible to reach the effects that lexical rules had for example remapping of arguments by semantic means The semantic constraints can be evaluated in the syntactic component which is basically similar to the delayed execution of lexical rules So this is a new formalization that might be suitable to provide solutions to longstanding problems that are not available for other formalizations While the authors suggest a lexical treatment of many phenomena and only assume phrasal constructions for selected phenomena like benefactive and resultative constructions in English it can be shown that even these two constructions should not be treated phrasally in English and that the analysis would not extend to other languages as for instance German I show that the new formal tools do not really improve the situation and many of the basic conceptual problems remain Since this specific proposal fails for two constructions it follows that proposals in the same framework that assume phrasal analyses for all constructions are not appropriate either The conclusion is that lexical models are needed and this entails that the schemata that combine syntactic objects are rather abstract as in Categorical Grammar Minimalism HPSG and standard LFG On the other hand there are constructions that should be treated by very specific phrasal schemata as in Construction Grammar and LFG and HPSG So the conclusion is

that both schools are right and wrong and that a combination of ideas from both camps is needed      Argument Structure Scott Lovell, 2018-07-20 If you want to impress your colleagues friends and family with remarkable argumentation skills and logical thinking then keep reading Have you ever lost an argument Have you ever been accused of being irrational or confusing Have you ever gotten into a debate only to find that you have contradicted yourself twice and don't even know what you think anymore Don't be discouraged if you answered yes to all three questions The truth is that most people do You see most debaters make the same mistakes with both their argument structure and their responses You may even make deadly logical sins without even realizing But now you can stay informed with insider tips usually only known to top debaters which will maximize your chances of winning debates and receiving praise for your new remarkable skills With examples from classical literature and advice compiled from many different sources this book will ground you in methods that have been developed over centuries of rhetorical exercise By reading Argument Structure Secrets of the World's Best Debaters Master the Structure of Arguments you will Learn how to lay down powerful premises that will keep your argument from contradicting itself Discover how to never get stuck in a logical fallacy again See examples of all kinds of logical fallacies so you can laugh inside as your opponent gets stuck in them Learn how to turn logical fallacies back on your opponent Master the art of analogy Organize your arguments like a pro Identify the difference between good and bad sources Figure out the difference between deductive and inductive reasoning Learn what to do when logic is not enough to convince your audience Discover tips and tricks for presenting yourself in a way that will help people believe you from voice to posture Get advice on how to present yourself in a courtroom Get an entire chapter on writing argumentative essays guaranteed to boost your grades and your credibility And Much Much More So if you want to learn more about how to master the structure of arguments and never get stuck stammering again click add to cart      Language Use and Linguistic Structure. Proceedings of the Olomouc Linguistic Colloquium 2023 Janebová, Markéta, Čakányová, Michaela, Emonds, Joseph, The latest volume of OLINCO proceedings is a selected set of sixteen papers that grew from presentations at OLINCO 2023 the international Olomouc Linguistics Colloquium held at Palack University in June 2021 The papers collected here are unified by the topic of the colloquium Language Use and Linguistic Structure in that they all in one way or the other address the central questions of the study of human language They all use standard scientific methodology and theory and solidly researched empirical evidence in favor of formalized structural representations of the language system      The Argument of Mathematics Andrew Aberdein, Ian J Dove, 2013-07-01 Written by experts in the field this volume presents a comprehensive investigation into the relationship between argumentation theory and the philosophy of mathematical practice Argumentation theory studies reasoning and argument and especially those aspects not addressed or not addressed well by formal deduction The philosophy of mathematical practice diverges from mainstream philosophy of mathematics in the emphasis it places on what the majority of working mathematicians actually do rather than on mathematical foundations The book begins by first

challenging the assumption that there is no role for informal logic in mathematics Next it details the usefulness of argumentation theory in the understanding of mathematical practice offering an impressively diverse set of examples covering the history of mathematics mathematics education and perhaps surprisingly formal proof verification From there the book demonstrates that mathematics also offers a valuable testbed for argumentation theory Coverage concludes by defending attention to mathematical argumentation as the basis for new perspectives on the philosophy of mathematics

*Lexical Specification and Insertion* Peter Coopmans, Martin Everaert, Jane Barbara Grimshaw, 2000 The papers in this volume address the general question what type of lexical specifications we need in a generative grammar and by what principles this information is projected onto syntactic configurations or to put it differently how lexical insertion is executed Many of the contributions focus on what the syntactic consequences are of choices that are made with respect to the lexical specifications of heads The data in the volume are drawn from diverse languages among which Brazilian Portuguese Bulgarian Dutch English French German Icelandic Italian Mohawk Norwegian Polish Russian *THE SYNTAX AND THE SEMANTICS OF MANNER OF SPEAKING VERBS* IRINA STOICA, 2021-01-01 While this book primarily discusses manner of speaking verbs in English data from other languages such as Romanian Italian German and others set the scene for a series of important questions from the point of view of crosslinguistic variation □□□□□□□□□□□□□□□□ □□□, 2021-10-01

**Complement Structure in French** Julia Herschensohn, 1996-02-29 Adopting the theoretical framework of the minimalist program this study of syntactic limitations on complement configuration investigates the link between thematic external arguments and case Using evidence from pronominal psychological experiencer and inalienable constructions it argues that both accusative and dative are structural cases in French and that this duality is reflected in a parallel limit on argument

projection Larson's single complement hypothesis which allows a maximum of two internal arguments provides the theoretical justification for this proposal. The testing ground for the binary hypothesis is a group of nonthematic subject constructions involving undative as well as unaccusative verbs linking according to Burzio's generalization: case suspension and lack of an internal argument. The investigation of these constructions and those involving partitive case provides not only a theoretically significant contribution to our understanding of grammar but also a motivated explanation for a number of empirical problems in French.
