## **Structure Of Evolutionary Theory:**

**The Structure of Evolutionary Theory** Stephen Jay Gould, 2002-03-21 The world's most revered and eloquent interpreter of evolutionary ideas offers here a work of explanatory force unprecedented in our time a landmark publication both for its historical sweep and for its scientific vision With characteristic attention to detail Stephen Jay Gould first describes the content and discusses the history and origins of the three core commitments of classical Darwinism that natural selection works on organisms not genes or species that it is almost exclusively the mechanism of adaptive evolutionary change and that these changes are incremental not drastic Next he examines the three critiques that currently challenge this classic Darwinian edifice that selection operates on multiple levels from the gene to the group that evolution proceeds by a variety of mechanisms not just natural selection and that causes operating at broader scales including catastrophes have figured prominently in the course of evolution Then in a stunning tour de force that will likely stimulate discussion and debate for decades Gould proposes his own system for integrating these classical commitments and contemporary critiques into a new structure of evolutionary thought In 2001 the Library of Congress named Stephen Jay Gould one of America's eighty three Living Legends people who embody the quintessentially American ideal of individual creativity conviction dedication and exuberance Each of these qualities finds full expression in this peerless work the likes of which the scientific world has not seen and may not see again for well over a century

**The Structure and Confirmation of Evolutionary Theory** Elisabeth A. Lloyd, 2021-01-12 Traditionally a scientific theory is viewed as based on universal laws of nature that serve as axioms for logical deduction In analyzing the logical structure of evolutionary biology Elisabeth Lloyd argues that the semantic account is more appropriate and powerful This book will be of interest to biologists and philosophers alike

**The Structure of Evolutionary Theory** Paul Thompson, **The Richness of Life** Stephen Jay Gould, 2007 This spotlight on an extraordinary mind collects the most entertaining and enlightening writings by the beloved paleontologist evolutionary biologist and celebrant of the wonder of life 20 illustrations

**The Structure and Confirmation of Evolutionary Theory** Elizabeth Anne Lloyd, 1994 **The Theory of Evolution** Samuel M. Scheiner, David P. Mindell, 2020-01-07 Darwin's nineteenth century writings laid the foundations for modern studies of evolution and theoretical developments in the mid twentieth century fostered the Modern Synthesis Since that time a great deal of new biological knowledge has been generated including details of the genetic code lateral gene transfer and developmental constraints Our improved understanding of these and many other phenomena have been working their way into evolutionary theory changing it and improving its correspondence with evolution in nature And while the study of evolution is thriving both as a basic science to understand the world and in its applications in agriculture medicine and public health the broad scope of evolution operating across genes whole organisms clades and ecosystems presents a significant challenge for researchers seeking to integrate abundant new data and content into a general theory of evolution This book

gives us that framework and synthesis for the twenty first century The Theory of Evolution presents a series of chapters by experts seeking this integration by addressing the current state of affairs across numerous fields within evolutionary biology ranging from biogeography to multilevel selection speciation and macroevolutionary theory By presenting current syntheses of evolution s theoretical foundations and their growth in light of new datasets and analyses this collection will enhance future research and understanding

Evolutionary Theory and Processes: Modern Perspectives Solomon P. Wasser,2012-12-06 This volume consists of papers written by evolutionary molecular and organismal biologists geneticists ecologists behavioural ecologists morphologists mathematicians theoreticians and experimentalists in honour of Professor Eviatar Eibi Nevo on the occasion of his seventieth birthday The contributors are only a small subset of Eibi s many friends collaborators and students not that one can distinguish these categories among Eibi s colleagues His widespread influence and activity both in Israel and more generally as a leading evolutionary biologist is indicated by his many co authors on books and papers and by his many students integrated in teaching and research This volume presents some of the most recent dramatic results of molecular genomic and organismal evolutionary processes It represents analyses experiments observations reviews discussions and forecasts of evolutionary theory comprising both novel methods and results reanalyzed and reviewed data sets based on comparative experimental and theoretical studies utilizing model organisms across phylogeny including bacteria fungi plants animals and humans It elucidates the revolution in molecular biology that ushered in our understanding of the evolutionary process over time and space The topics discussed include major problems of evolutionary theory concerning origins phylogeny relative importance of evolutionary forces structure and function adaptation and speciation in space and time in changing and stressful environments A major emerging generalization is the nonrandomness of genome structure highlighting the importance of natural selection as a major organizing evolutionary force not only at the phenotypic level but most importantly at the interlinked genotypic molecular level The integration between the molecular and organismal levels unifies life which is subjected to the mechanism of natural selection as a major orienting evolutionary force

**Evolution and Development** Alan C. Love,2024-03-07 The intersection of development and evolution has always harbored conceptual issues but many of these are on display in contemporary evolutionary developmental biology evo devo These issues include 1 the precise constitution of evo devo with its focus on both the evolution of development and the developmental basis of evolution and how it fits within evolutionary theory 2 the nature of evo devo model systems that comprise the material of comparative and experimental research 3 the puzzle of how to understand the widely used notion of conserved mechanisms 4 the definition of

evolutionary novelties and expectations for how to explain them and 5 the demand of interdisciplinary collaboration that derives from investigating complex phenomena at key moments in the history of life such as the fin limb transition This Element treats these conceptual issues with close attention to both empirical detail and scientific practice to offer new perspectives on evolution and development This title is also available as Open Access on Cambridge Core

**Designing Organizations** Richard M. Burton,Bo Eriksen,Dorthe Døjbak Håkonsson,Thorbjørn Knudsen,Charles C. Snow,2008-06-25 Designing Organizations 21st Century Approaches is a benchmark publication in the field of organization design The recent development in organization design has been sporadic hence this book will be an important step in creating more thoughtful research and stronger empirical analyses that take advantage of advances in estimation methods allowing for more complex causal modeling and stimulation technologies Featured in the book are the more practical elements of implementing OD in organizations The chapter material is organized into five sections 1 Putting Contingency Theory in its Place 2 Focus on Individuals who make up the Organization 3 Innovation Processes and Organization Design 4 Adaptation and Technology and 5 Design for Performance The book will be a broad discussion of topics in the field but still each individual chapter will provide in depth analysis of the topic

**Literary Structure, Evolution, and Value** Jurij Striedter,1989 *Evolutionary Theory and Processes: Modern Horizons* Solomon P. Wasser,2013-03-09 Evolution is the most profound of human ideas integrating all natural phenomena cosmic biological and cultural into a continuous universal change This volume deals with evolutionary observations experiments and theories contributing to a deeper understanding of the evolutionary process th honoring the 75 birthday of Eviatar Eibi Nevo I first met Eibi in 1966 when he was a Fellow in the Museum of Comparative Zoology at Harvard University and working mostly on cricket frog vocalization and speciation in the United States His unique discovery of pipid fossil frogs in the Israeli Early Cretaceous central Negev is possibly the largest world collection of ancient fossil frogs Our acquaintance developed into mutual friendship and admiration Since then our long lasting friendship has included a visit to Israel enabling me to follow Eibi s major scientific achievements in particular his founding of the Institute of Evolution in the University of Haifa and now the pending establishment of the International Graduate School of Evolution The research program of Eibi Nevo in collaboration with numerous colleagues and students in Israel and across the world encompasses diverse perspectives of evolutionary biology and biodiversity of genes populations species and ecosystems integrating modern and classical evolutionary approaches molecular and organismal They deal with model organisms in all forms from bacteria through plants fungi animals and humans conducted over local regional and global scales

**Pulsating Stars** Márcio Catelan,Horace A. Smith,2015-02-02 This book surveys our understanding of stars which change in brightness because they pulsate Pulsating variable stars are keys to distance scales inside and beyond the Milky Way galaxy They test our understanding not only of stellar pulsation theory but also of stellar structure and evolution theory Moreover pulsating stars are important probes of the formation and evolution of our own and neighboring galaxies Our understanding of

pulsating stars has greatly increased in recent years as large scale surveys of pulsating stars in the Milky Way and other Local Group galaxies have provided a wealth of new observations and as space based instruments have studied particular pulsating stars in unprecedented detail

**Isozymes: Organization And Roles In Evolution, Genetics And Physiology, Proceedings Of The Seventh International Congress On Isozymes** C L Markert, John G Scandalios, Hwa A Lim, O L Serov, 1994-07-26 Organisms frequently synthesize enzymes in multiple molecular forms to catalyze the same basic biochemical reactions Each of these enzymes exhibit somewhat different kinetic properties and perhaps are also located in a specific part of the metabolic structure of the cell This isozymic multiplicity only emphasizes the biochemical versatility and refinement of the genetic enzyme structure of organisms Since the isozyme concept was formulated some thirty five years ago and especially after the advent of transgenic technology the deep interest in the area has led to thousands of research investigations and many international conferences on the subject This volume is a collection of selected oral presentations from one such conference which is by now well known Topics includes isozymes in population and evolution genetics isozyme markers in gene mapping isozymes in plant genetics role of isozymes for normal physiology the use of isozymes in human population biology molecular organization and developmental regulation of isozymes and other related topics

The Structure of Biological Theories Paul Thompson, 1989-01-01 The central thesis of this book is that the semantic conception is a logical methodologically and heuristically richer and more accurate account of scientific theorizing and in particular of theorizing in evolutionary biology than the more widely adhered to syntactic conception In this book the author outlines both the conceptions indicating the significant problems with the syntactic conception explains and criticizes two influential syntactic conception accounts of the structure of evolutionary theorizing Thompson also argues that the semantic conception provides a richer and more accurate understanding than the syntactic conception of sociobiological explanation of the testability of sociobiology and of the role of culture and cognition in evolutionary explanations of human behavior

**Evolutionary Causation** Tobias Uller, Kevin N. Lala, 2019-09-03 A comprehensive treatment of the concept of causation in evolutionary biology that makes clear its central role in both historical and contemporary debates Most scientific explanations are causal This is certainly the case in evolutionary biology which seeks to explain the diversity of life and the adaptive fit between organisms and their surroundings The nature of causation in evolutionary biology however is contentious How causation is understood shapes the structure of evolutionary theory and historical and contemporary debates in evolutionary biology have revolved around the nature of causation Despite its centrality and differing views on the subject the major conceptual issues regarding the nature of causation in evolutionary biology are rarely addressed This volume fills the gap bringing together biologists and philosophers to offer a comprehensive interdisciplinary treatment of evolutionary causation Contributors first address biological motivations for rethinking evolutionary causation considering the ways in which development extra genetic inheritance and niche construction challenge notions of cause and process in

evolution and describing how alternative representations of evolutionary causation can shed light on a range of evolutionary problems Contributors then analyze evolutionary causation from a philosophical perspective considering such topics as causal entanglement the commingling of organism and environment and the relationship between causation and information Contributors John A Baker Lynn Chiu David I Dayan Ren e A Duckworth Marcus W Feldman Susan A Foster Melissa A Graham Heikki Helanter Kevin N Lala Armin P Moczek John Odling Smee Jun Otsuka Massimo Pigliucci Arnaud Pocheville Arlin Stoltzfus Karola Stotz Sonia E Sultan Christoph Thies Tobias Uller Denis M Walsh Richard A Watson

**Spatial Evolutionary Modeling** Roman Krzanowski,Jonathan Raper,2001 Annotation Evolutionary models e g genetic algorithms artificial life explored in other fields for the past two decades are now emerging as an important new tool in GIS for a number of reasons First they are highly appropriate for modeling geographic phenomena Secondly geographical problems are often spatially separate broken down into local or regional problems and evolutionary algorithms can exploit this structure Finally the ability to store manipulate and visualize spatial data has increased to the point that space time attribute databases can be easily handled
