Clearly organized and broad ranging it covers topics such as parts of speech, passives, complementation, relative clauses, adverbial clauses, inflectional morphology, tense, aspect, mood, and deixis. The contributors look at the major ways that these notions are realized and provide informative sketches of them at work in a range of languages. Each volume is accessibly written and clearly explains each new concept introduced. Although the volumes can be read independently together they provide an indispensable reference work for all linguists and fieldworkers interested in cross-linguistic generalizations. Most of the chapters in the second edition are substantially revised or completely new, some on topics not covered by the first edition. Volume II covers coordination, complementation, noun phrase structure, relative clauses, adverbial clauses, discourse structure, and sentences as combinations of clauses.

**digitalSTS** Janet

Vertesi, David Ribes, 2019-05-07 New perspectives on digital scholarship that speak to today's computational realities. Scholars across the humanities, social sciences, and information sciences are grappling with how best to study virtual environments, use computational tools in their research, and engage audiences with their results. Classic work in science and technology studies (STS) has played a central role in how these fields analyze digital technologies, but many of its key examples do not speak to today's computational realities. This groundbreaking collection brings together a world-class group of contributors to refresh the canon for contemporary digital scholarship. In twenty-five pioneering and incisive essays, this unique digital field guide offers innovative new approaches to digital scholarship: the design of digital tools and objects and the deployment of critically grounded technologies for analysis and discovery. Contributors cover a broad range of topics, including software development, hackathons, digitized objects, diversity in the tech sector, and distributed scientific collaborations. They discuss methodological considerations of social networks and data analysis, design projects that can translate STS concepts into durable scientific work, and much more. Featuring a concise introduction by Janet Vertesi and David Ribes and accompanied by an interactive microsite, this book provides new perspectives on digital scholarship that will shape the agenda for tomorrow's generation of STS researchers and practitioners. **Policy Analysis for Social Workers**

Richard K. Caputo, 2013-09-17 **Policy Analysis for Social Workers** offers a comprehensive step-by-step guide to understanding the process of policy development and analysis for effective advocacy. This user-friendly model helps students get excited about understanding policy as a product, a process, and as performance, a unique 3 P approach to policy analysis, as competing texts often just focus on one of these areas. Author Richard K. Caputo efficiently teaches the purpose of policy and its relation to social work values, discusses the field of policy studies, and the various kinds of analysis, and highlights the necessary criteria: effectiveness, efficiency, equity, political feasibility, social acceptability, administrative and technical feasibility for evaluating public policy. Enhancing Human Traits

Erik Parens, 2000-01-03 In this volume, scholars from philosophy, sociology, history, theology, women's studies, and law explore the looming ethical and social implications of new biotechnologies that are rapidly making it possible to enhance an individual's mental and physical attributes in ways previously only imagined. To clarify the issues, the contributors grapple with the central concept of enhancement and probe the uses and abuses of the term. Focusing in particular on the moral issues pertaining to cosmetic surgery and cosmetic psychopharmacology, a category which includes Prozac, they also examine notions of identity, authenticity, normality, and complicity. Other essays in this collection address the social ramifications of the new technologies, including the problems of access and fairness. **Social Action Systems** Thomas J. Fararo, 2001-09-30 Fararo studies general theoretical sociology as a time-extended tradition with three phases: classical, postclassical, and recent. Employing a process-philosophical approach, the author seeks to examine these three phases in an effort to provide a synthesis of the theories that seek to lay the foundations of theoretical sociology. The author especially focuses on the work of Talcott Parsons and George Homans, two

contemporary theorists whose common aspiration was to forge a theoretical foundation for sociology that would serve to unify and integrate all theories growing out of sociological research in much the same way that the theory of evolution guides and integrates all other biological theories To begin the author provides a history and overview of the key classical theoretical frameworks from the perspective of process philosophy which he applies to all three phases of the study Fararo then carefully analyzes two major postclassical bodies of general theory namely the evolving and intertwined frameworks of Parsons and Homans from their early theories of social systems to their later divergent perspectives on foundation and synthesis in sociological theory Finally the discussion turns to the recent phase of general theoretical sociology where more recent foundation strategies rational choice theory and generative structuralism are analyzed in relation to the postclassical phase of the tradition This important and sophisticated new work is essential for all those interested in sociological theory in particular and sociology in general

*A Second Chicago School?* Gary Alan Fine, 1995-09 From 1945 to about 1960 the University of Chicago was home to a group of faculty and graduate students whose work has come to define what many call a second Chicago School of sociology Like its predecessor earlier in the century the postwar department was again the center for qualitative social research on everything from mapping the nuances of human behavior in small groups to seeking solutions to problems of race crime and poverty Howard Becker Joseph Gusfield Herbert Blumer David Riesman Erving Goffman and others created a large enduring body of work In this book leading sociologists critically confront this legacy The eight original chapters survey the issues that defined the department's agenda the focus on deviance race and ethnic relations urban life and collective behavior the renewal of participant observation as a method and the refinement of symbolic interaction as a guiding theory and the professional and institutional factors that shaped this generation including the leadership of Louis Wirth and Everett C Hughes the role of women and the competition for national influence Chicago sociology faced from survey research at Columbia and grand theory at Harvard The contributors also discuss the internal conflicts that call into question the very idea of a unified school
