**Novel Precast Concrete Structure Systems** Gang Wu, De-Cheng Feng, Chun-Lin Wang, 2023-01-07 This book systematically presents these findings for the first time focusing on the composition force mode structural characteristics performance advantages and calculation methods for each new structural system and comparing each one with traditional structural systems In view of the persistent problems in the current equivalent cast in situ precast concrete structural systems and the development of non equivalent cast in situ precast concrete structure systems Southeast University and Harbin Institute of Technology have conducted extensive research and proposed several new types of precast concrete structural systems Their findings in this regard can promote the development of basic theories and technologies for building industrialization accelerate the advancement of China's building industrialization promote the application of precast building technology and realize the concept of green building

*Seismic Performance of Soil-Foundation-Structure Systems* Nawawi Chouw, Rolando P. Orense, Tam Larkin, 2017-08-25 Seismic Performance of Soil Foundation Structure Systems presents invited papers presented at the international workshop University of Auckland New Zealand 21-22 November 2016 This international workshop brought together outstanding work in earthquake engineering that embraces a holistic consideration of soil-foundation structure systems For example the diversity of papers in this volume is represented by contributions from the fields of shallow foundation in liquefiable soil spatially distributed lifelines bridges clustered structures see photo on front cover sea floor seismic motion multi axial ground excitation deep foundations soil foundation structure-fluid interaction liquefaction induced settlement and uplift with SFSI A fundamental knowledge gap is manifested by the isolated manner geotechnical and structural engineers work A holistic consideration of soil foundation structures systems is only possible if civil engineers work collaboratively to the mutual benefit of all disciplines Another gap occurs by the retarded application of up to date research findings in engineering design practices Seismic Performance of Soil Foundation Structure Systems is the outcome from the recognized need to close this gap since it has been observed that a considerable delay exists between published research findings and application of the principles revealed by the research Seismic Performance of Soil Foundation Structure Systems will be helpful in developing more understanding of the complex nature of responses these systems present under strong earthquakes and will assist engineers in closing the gaps identified above

*Recent Developments in Variable Structure Systems, Economics and Biology* R.R. Mohler, A. Ruberti, 2012-12-06 The seminar for which the proceedings are published here evolved from a cooperative research program on bilinear systems and applications to immunology at the Oregon State University and at the University of Rome The topics include more general forms of variable structure systems which may be divided into categories of mathematical system theory economic applications and biological applications Throughout the seminar there was emphasis on the integration of theory and application In most cases theoretical derivations are motivated by their need to solve practical problems In reading the proceedings it becomes

apparent that bilinear systems quadratic systems and more general variable structure or adaptive systems become natural models in many cases and excellent approximations in others It is seen that linear systems have very limited use particularly in economics and biology Variable structure systems are analyzed in terms of structure volterra kernels system modelling parameter identification controllability and Lie algebra to mention a few Certainly it is not possible to present a complete treatment of these numerous topics but at the Same time the unifying power of the systems approach and variable structure systems is shown

Advances In Variable Structure Systems: Analysis, Integration And Application - Proceedings Of The 6th Ieee International Workshop On Variable Structure Systems Jian-xin Xu,Xing Huo Yu,2000-11-14 The last of such a workshop in the 20th Century this workshop aims not only to summarize the state of the art developments in VSS theory and applications but also identify new promising directions perceived as being important for VSS in the 21st century The 20th Century has witnessed the formation and consolidation of VSS theory and its applications It has also witnessed an emerging trend of cross fertilization and integration of VSS with other control and non control areas such as feedback linearization flatness passivity based control adaptive control system identification pulse width modulation Hinf geometric and algebraic methods artificial intelligence modelling and optimisation neural networks fuzzy logic etc This trend will continue and flourish in the new millennium Special features of the book include a survey paper entitled VSS Premise of XX Century Evidences of a Witness by the father of VSS theory Professor Vadim Utkin and other articles by many authoritative experts in VSS

**Systems Methodology in Social Science Research** R. Cavallo,2013-06-29 From the beginning the systems research movement has

shown a high potential for offering a conceptual framework for the understanding of social systems Much of this potential has been realized but a major gap remains with regard to operational investigative aids Developments of the last ten years with a method ological orientation and emphasis seem finally to be filling this gap The purpose of this book is to describe the most advanced of these developments and to make them available to a wider audience The emphasis is on developments that are primarily oriented toward interaction with expertise in the social sciences and that thus hold the most promise for social systems investigation In particu lar attempts have been made to provide substantiation and illustration of three main points 1 the common motivation and essential integrability that systems research provides for developments and considerations along a very broad spec trum of interests 2 the very diverse nature of the types and forms of considera tions that may be meaningfully integrated and 3 the operational and usable nature that developments in systems methodology represent for research in the social sciences The book is divided into three parts with a generally increasing degree of specificity The first part Chapters 1 2 and 3 deals with foundational issues associated with modeling and methodology as areas worthy of study in their ix X PREFACE own right
