Structural Insights Into Gene Expression And Protein Synthesis Thomas A Steitz, 2020-08-18 Several years ago Thomas Steitz agreed to contribute a volume to the World Scientific Series in Structural Biology that would deal with the contributions he and his coworkers have made to structural biology during his remarkable career Sadly Tom died in the fall of 2018 before he had had time to do more than produce an outline for this book and a list of the reprints he wanted it to contain Fortunately Tom's colleagues and coworkers responded enthusiastically when they were informed later that fall that if they were willing to help out a volume would be published to commemorate his career It fell to Anders Liljas Peggy Eatherton Tom's longtime administrative assistant and Peter Moore a close colleague to oversee their efforts Thomas Steitz is best known for the work he and his coworkers did to elucidate the biochemical basis of gene expression The structures of a large number of the macromolecules involved in transcription and translation emerged from his laboratory over the course of his career This book includes reprints of the most important papers he had published grouped according to the structures they relate to and commentaries written by the scientists who collaborated with him to solve each of them It thus summarizes the achievements of one of the most distinguished biochemists of the second half of the 20th century **Vitamin B12**

Molecular Evolution of RNA Regulatory Enzymes and Their Systems Akio Kanai, Allen W. Nicholson, 2025-10-30 With the advent of next generation sequencing

technologies the genomic sequences for an ever expanding number of organisms have been decoded providing immense databases of protein amino acid sequences and DNA and RNA nucleotide sequences These databases are allowing comparisons across thousands of species enabling the identification of those that have undergone significant molecular evolution in specific proteins or RNA molecules In the 21st century RNA biology has gained major attention with the discovery of functional non coding RNAs and regulatory systems including CRISPR These advances have clarified with high resolution the evolutionary transitions of RNA related enzymes and RNA binding proteins which govern the flow of genetic information This book provides an in depth overview on the molecular evolution of RNA related enzymes RNA binding proteins and RNA regulatory systems The focus is not only on newly identified RNA regulatory factors or systems that have garnered attention since the beginning of the 21st century but it also elucidates RNA related molecules with fundamental and significant roles in cellular genetic regulation or the regulatory systems themselves Specifically the volume revisits molecules involved in transcription RNA polymerase pre mRNA processing and degradation ribonucleases such as RNase E RNase III and self cleaving ribozymes and in translation ribosomal proteins and translation factors regardless of their novelty This volume thus is intended to serve as an essential resource for furthering the systematic understanding of cellular genetic regulation from a molecular evolutionary standpoint
