Automating Systems Development David R. Benyon, Steve Skidmore, 2012-12-06 1 INTRODUCTION These proceedings are the result of a conference on Automating Systems Development held at Leicester Polytechnic England on 14 to 16 April 1987 The conference was attended by over 170 delegates from industry and academia and it represents a comprehensive review of the state of the art of the use of the computer based tools for the analysis design and construction of Information Systems IS Two parallel streams ran throughout the conference The academic or research papers were the fruit of British

European and Canadian research with some of the papers reflecting UK Government funded Alvey or European ESPRIT research projects Two important touchstones guided the selection of academic papers Firstly they should be primarily concerned with system rather than program development Secondly they should be easily accessible to delegates and readers We felt that formal mathematical papers had plenty of other opportunities for airing and publication The second stream was the applied programme a set of formal presentations given by leading software vendors and consultancies It is clear that many advances in systems development are actually applied rather than research led Thus it was important for delegates to hear how leading edge companies view the State of the Art This was supported by a small exhibition area where certain vendors demonstrated the software they had introduced in the formal presentation

Guide to Software Systems Development Clive Rosen, 2020-04-06 This book argues that the key problems of software systems development SSD are socio technical rather than purely technical in nature Software systems are unique They are the only human artefacts that are both intangible and determinant This presents unprecedented problems for the development process both in determining what is required and how it is developed Primarily this is a problem of communications between stakeholders and developers and of communications within the development team Current solutions are not only inadequate in expressing the technical problem they also evade the communications problems almost entirely Whilst the book addresses the theoretical aspects of the process its fundamental philosophy is anchored in the practical problems of everyday software development It therefore offers both a better understanding of the problems of SSD and practical suggestions of how to deal with those problems It is intended as a guide for practising IT project managers particularly those who are relatively new to the position or do not have a strong IT development background The book will also benefit students in computing and computer related disciplines who need to know how to develop high quality systems Software systems development particularly of large projects has a notoriously poor track record of delivering projects on time on budget and of meeting user needs Proponents of software engineering suggest that this is because too few project

managers actually comply with the disciplines demanded of the process It is time to ask the question if this is the case why might this be Perhaps instead it is not the project managers who are wrong but the definition of the process The new understanding of the SSD presented here offers alternative models that can help project managers address the difficulties they face and better achieve the targets they are set This book argues that time is up for the software engineering paradigm of SSD and that it should be replaced with a socio technical paradigm based on open systems thinking
