Structuring Events A Study In The Semantics Of Lexical Aspect

M. Ryan Bochnak, Lisa Matthewson

Structuring Events A Study In The Semantics Of Lexical Aspect:

Structuring Events Susan Rothstein, 2008-04-15 *Structuring Events* presents a novel semantic theory of lexical aspect for anyone interested in the study of verb meanings Provides an introduction to aspectual classes and aspectual distinctions Utilizes case studies to present a novel semantic theory of lexical aspect and compare it with alternative theories Useful for students and scholars in semantics and syntax as well as the neighboring fields of pragmatics and philosophy of language

Theoretical and Crosslinguistic Approaches to the Semantics of Aspect Susan Deborah Rothstein, 2008 The papers in this volume investigate the semantics of aspect from both a theoretical and cross linguistic point of view in a wide range of languages from a number of different language families The papers are all informed by the belief that a thorough exposure to the expression of aspect cross linguistically is crucial for progress in understanding how the semantics of aspect and what the semantic basis of aspectual distinctions is The languages discussed include Russian English Dutch Hebrew Mandarin Japanese and Kalaallisut The issues discussed in this volume include the centrality of measuring and counting in an understanding of telicity the importance of the singular plural distinction in the study of aspect the importance of homogeneity as a property of event types the flexibility of lexical classes and the interaction between expressions of aspect and the particular morphosyntactic structure of a language

Ten Lectures on Event Structure in a Network Theory of Language Nikolas Gisborne, 2020-08-31 In *Ten Lectures on Event Structure in a Network Theory of Language* Nikolas Gisborne explores verb meaning He discusses theories of events and how a network model of language in the mind should be theorized what the lexicon is how to probe word meaning evidence for structure in word meaning polysemy the lexical semantics of causation a type hierarchy of events and event types cross linguistically He also looks at the relationship between different classes of events or event types and aktionsarten transitivity alternations and argument linking Gisborne argues that the social and cognitive embedding of language requires a view of linguistic structure as a network where even the analysis of verb meaning can require an understanding of the role of speaker and hearer

Events, Arguments, and Aspects Klaus Robering, 2014-03-15 The verb has often been considered the center of the sentence and has hence always attracted the special attention of the linguist The present volume collects novel approaches to two classical topics within verbal semantics namely argument structure and the treatment of time and aspect The linguistic material covered comes from a broad spectrum of languages including English German Danish Ukrainian and Australian aboriginal languages and methods from both cognitive and formal semantics are applied in the analyses presented here Some of the authors use a variety of event semantics in order to analyze argument structure and aspect whereas others employ ideas coming from object oriented programming in order to achieve new insights into the way how verbs select their arguments and how events are classified into different types Both kinds of methods are also used to give accounts of dynamical aspects of semantic interpretation such as coercion and type shifting

Studies in the Composition and Decomposition of Event

Predicates Boban Arsenijević, Berit Gehrke, Rafael Marín, 2013-02-26 This detailed perceptive addition to the linguistics literature analyzes the semantic components of event predicates exploring their fine grained elements as well as their agency in linguistic processing The papers go beyond pure semantics to consider their varying influences of event predicates on argument structure aspect scalarity and event structure The volume shows how advances in the linguistic theory of event predicates which have spawned Davidsonian and neo Davidsonian notions of event arguments in addition to event structure frameworks and mereological models for the eventuality domain have sidelined research on specific sets of entailments that support a typology of event predicates Addressing this imbalance in the literature the work also presents evidence indicating a more complex role for scalar structures than currently assumed It will enrich the work of semanticists psycholinguists and syntacticians with a compositional approach to verb phrase structure *Methodologies in Semantic Fieldwork* M. Ryan

Bochnak, Lisa Matthewson, 2015-01-02 This volume discusses methodological issues in conducting elicitation on semantic topics in a fieldwork situation In twelve chapters discussing 11 language families from four continents authors draw on their own fieldwork experience pairing explicit methodological proposals with concrete examples of their use in the field Several chapters cover issues specific to semantic topics such as modality comparison tense and aspect and definiteness while others focus on elicitation techniques more generally addressing methodological issues such as the creation of elicitation plans the choice of language in which to conduct elicitation and the status of translation tasks Together the chapters of this volume demonstrate that elicitation on semantic topics when conducted following sound methodologies can and does produce reliable results Given the high number of languages currently classified as endangered conducting one on one fieldwork with native speaker consultants is critical for gathering new empirical findings that bear on linguistic theory **The Oxford**

Handbook of Event Structure Robert Truswell, 2019-03-26 This handbook deals with research into the nature of events and how we use language to describe events The study of event structure over the past 60 years has been one of the most successful areas of lexical semantics uniting insights from morphology and syntax lexical and compositional semantics cognitive science and artificial intelligence to develop insightful theories of events and event descriptions This volume provides accessible introductions to major topics and ongoing debates in event structure research exploring what events are how we perceive them how we reason with them and the role they play in the organization of grammar and discourse The chapters are divided into four parts the first covers metaphysical issues related to events the second is concerned with the relationship between event structure and grammar the third is a series of crosslinguistic case studies and the fourth deals with links to cognitive science and artificial intelligence more broadly The book is strongly interdisciplinary in nature with insights from linguistics philosophy psychology cognitive science and computer science and will appeal to a wide range of researchers and students from advanced undergraduate level upwards **Semantics - Lexical Structures and Adjectives**

Claudia Maienborn, Klaus von Heusinger, Paul Portner, 2019-02-19 Discover vital research on the lexical and cognitive

meanings of words In this exciting book from a team of world class researchers in depth articles explain a wide range of topics including thematic roles sense relation ambiguity and comparison The authors focus on the cognitive and conceptual structure of words and their meaning extensions such as coercion metaphors and metonymies The book features highly cited material available in paperback for the first time since its publication and is an essential starting point for anyone interested in lexical semantics especially where it meets other cognitive and conceptual research

The Mayan Languages Judith Aissen, Nora C. England, Roberto Zavala Maldonado, 2017-05-12 The Mayan Languages presents a comprehensive survey of the language family associated with the Classic Mayan civilization AD 200 900 a family whose individual languages are still spoken today by at least six million indigenous Maya in Mexico Guatemala Belize and Honduras This unique resource is an ideal reference for advanced undergraduate and postgraduate students of Mayan languages and linguistics Written by a team of experts in the field The Mayan Languages presents in depth accounts of the linguistic features that characterize the thirty one languages of the family their historical evolution and the social context in which they are spoken The Mayan Languages provides detailed grammatical sketches of approximately a third of the Mayan languages representing most of the branches of the family includes a section on the historical development of the family as well as an entirely new sketch of the grammar of Classic Maya as represented in the hieroglyphic script provides detailed state of the art discussions of the principal advances in grammatical analysis of Mayan languages includes ample discussion of the use of the languages in social conversational and poetic contexts Consisting of topical chapters on the history sociolinguistics phonology morphology syntax semantics discourse structure and acquisition of the Mayan languages this book will be a resource for researchers and other readers with an interest in historical linguistics linguistic anthropology language acquisition and linguistic typology

The Processing of Events Oliver Bott, 2010-09-29 Synthesizing ideas from event semantics and psycholinguistics this monograph provides a new perspective on the processing of linguistic aspect and aspectual coercion Confronting alternative semantic accounts with experimental evidence the author develops a comprehensive model of online aspectual interpretation The first part of the book critically reviews competing theoretical accounts of aspectual coercion As an analytical tool the author introduces a computational model based on the event calculus by Hamm van Lambalgen 2005 which makes use of planning formalisms from artificial intelligence Detailed predictions from this framework are then tested in the experimental work reported in the second part The focus here is on such questions as Is aspectual coercion a uniform phenomenon or must we distinguish different types Is aspect processed incrementally or is it computed only at the clause boundary And finally what insights can event related potentials yield about how the brain resolves local aspectual mismatch

[ILSIENNA - Our Language- Vol. 1, 2009](#) ,

Manual of Grammatical Interfaces in Romance Susann Fischer, Christoph Gabriel, 2016-09-12 Different components of grammar interact in non trivial ways It has been under debate what the actual range of interaction is and how we can most appropriately represent this in grammatical theory The volume provides a

general overview of various topics in the linguistics of Romance languages by examining them through the interaction of grammatical components and functions as a state of the art report but at the same time as a manual of Romance languages

Stative Inquiries Alfredo García-Pardo, 2020-11-15 This monograph studies stative predicates from a neo constructionist perspective and integrates them in a comprehensive theory of event and argument structure It focuses on two sets of stative verbs govern type verbs and object experiencer psychological verbs For govern verbs it shows how notions such as causativity and resultativity can also be ingredients of stative predicates and be derived syntactically The consequences of this proposal are further pursued in a crosslinguistic investigation of adjectival passives which are stative predicates of sorts For object experiencer psychological verbs it is shown that their Experiencer theta role can and should be derived as an aspectual entailment mediated by prepositional structure In defending this view this monograph reveals a syntactic parallelism between location verbs and object experiencer psychological verbs in many languages that has hitherto gone unnoticed This book will primarily appeal to researchers interested in lexical aspect and its connection to morphosyntax

The Grammar-Pragmatics Interface Nancy Hedberg, Ron Zacharski, 2007-05-15 This collection of papers celebrates the work of Jeanette K Gundel who has contributed to the field of the grammar pragmatics interface through her publications on the syntactic realization of topic and comment and the cognitive status of referring expressions as well as by inspiring colleagues to make contributions to the overall field of pragmatics This volume collects together papers from colleagues and former students on pragmatics and syntax pragmatics and reference and pragmatics and social variables The volume includes papers devoted to explicating the grammar pragmatics interface with the focus of the papers ranging from Gricean and post Gricean pragmatics construction grammar and genre theory to formal semantics as well as papers devoted to expanding on Gundel's own original approach to factors such as the cognitive status decisions underlying speakers choice of referring expression and the topic and focus decisions underlying speakers choice of syntactic construction *Marking Past*

Tense in Second Language Acquisition Rafael Salaberry, 2008-06-22 This book presents an analysis of the difficulties faced by native speakers of English in the learning of Romance languages While L1 speakers of English may quickly learn to identify and to some extent use the Spanish perfective and imperfective verb endings the L2 representation of tense aspect distinctions among both beginning and advanced learners requires a comprehensive multidimensional analysis Through a detailed examination of new and existing empirical data this book proposes a theoretical analysis of the L2 acquisition of tense aspect marking along the lines of the claim of the default past tense hypothesis This theoretical analysis serves to reconcile competing alternative hypotheses and to highlight potential areas of future research This comprehensive account will be of interest to academics researching second language acquisition and applied linguistics Argument Structure and Syntactic Relations Maia Duguine, Susana Huidobro, Nerea Madariaga, 2010 The topic of this collection is argument structure The fourteen chapters in this book are divided into four parts Semantic and Syntactic Properties of Event Structure A

Cartographic View on Argument Structure Syntactic Heads Involved in Argument Structure and Argument Structure in Language Acquisition Rigorous theoretical analyses are combined with empirical work on specific aspects of argument structure The book brings together authors working in different linguistic fields semantics syntax and language acquisition who explore new findings as well as more established data but then from new theoretical perspectives The contributions propose cartographic views of argument structure as opposed to minimalistic proposals of a binary template model for argument structure in order to optimally account for various syntactic and semantic facts as well as data derived from wider cross linguistic perspectives Argument structure plays a central role in the articulation of syntax Yet whether this contribution is primordial or derivative derivational or representational minimalist or cartographic is entirely up for grabs This is what makes a book like the present one equivalent to a murder thriller one cannot finish one chapter without wanting to read the next While the solution to the underlying mystery remains as open as it ever was the clues offered here seem just impossible to ignore *Transitivity and Valency Alternations* Taro Kageyama, Wesley M. Jacobsen, 2016-07-25 This collection of papers is the first book ever published in English that presents detailed analyses of valency and transitivity alternations in Japanese from multifaceted standpoints morphology semantics syntax dialects history acquisition and language typology

Semantics John I. Saeed, 2015-08-04 Revised and updated to reflect recent theoretical developments in the field Semantics 4th Edition presents an engaging and accessible introduction to the study of meaning in language for students new to the field of semantics Covers all of the basic concepts and methods of the field of semantics as well as some of the most important contemporary lines of research Features a series of new exercises along with their solutions that are arranged by level of difficulty Addresses componential theory formal semantics and cognitive semantics the three main current theoretical approaches to semantics Includes revisions and updates that reflect the most recent theoretical developments **The Present-day English Gerund System** Charlotte Maekelberghe, 2020-09-21 This study offers a first comprehensive synchronic account of the Present day English gerundial system Most synchronic studies of gerunds have hitherto focused on the verbal gerund scrutinizing its categorial status or comparing it with other non finite clausal structures A systematic comparison with its nominal counterpart however is lacking Based on a detailed empirical analysis of lexico grammar and semantics this study develops an innovative cognitive constructionist model of the English gerund system which depicts the usage profiles of nominal and verbal gerunds in terms of probabilistic trends rather than by means of categorial labels It is shown that a better understanding of the functioning of the English gerund system requires a description that operates on multiple levels accounting for both the abstract construal gerunds can impose on an event as well as the token level constraints on variation between the two gerund types This multifaceted approach it is argued not only offers a new perspective on the configuration of ing forms in Present day English it can also be of relevance to the description of other complex grammatical structures **Event Structures in Linguistic Form and Interpretation**

Johannes Dölling, Tatjana Heyde-Zybatow, Martin Schäfer, 2013-12-06 This volume addresses the problem of how language expresses conceptual information on event structures and how such information can be reconstructed in the interpretation process. The papers present important new insights into recent semantic and syntactic research on the topic. The volume deals with the following problems in detail: event structure and syntactic construction, event structure and modification, event structure and plurality, event structure and temporal relation, event structure and situation aspect, and event structure and language ontology. Importantly, the topic is discussed not only on the basis of English and German but on the basis of other languages including Mandarin, Japanese, Korean, Indonesian, and Igbo as well. This volume thus provides solid evidence towards clarifying the empirical use of event-based analyses.
