Vernberg,1970 [Animals and the Environment](#) Lisa Kemmerer,2015-05-01 Contemporary Earth and animal activists rarely collaborate perhaps because environmentalists focus on species and ecosystems while animal advocates look to the individual and neither seems to have much respect for the other This diverse collection of essays highlights common ground between earth and animal advocates most notably the protection of wildlife and personal dietary choice If earth and animal advocates move beyond philosophical differences and resultant divergent priorities turning attention to shared goals both will be more effective and both animals and the environment will benefit Given the undeniable seriousness of the environmental problems that we face including climate change and species extinction it is essential that activists join forces Drawing on a wide range of issues and disciplines ranging from wildlife management hunting and the work of NGOs to ethics ecofeminism religion and animal welfare this volume provides a stimulating collection of ideas and challenges for anyone else who cares about the environment or animals **Saving Animals, Saving Ourselves** Jeff Sebo,2022 In 2020 COVID 19 the Australia bushfires and other global threats served as vivid reminders that human and nonhuman fates are increasingly linked Human use of nonhuman animals contributes to pandemics climate change and other global threats which in turn contribute to biodiversity loss ecosystem collapse and nonhuman suffering Both an urgent call to action and a survey of what ethical and effective action will require this book will be invaluable for scholars advocates policy makers and anyone interested in what kind of world we should attempt to build and how *Animals and the Environment* Lisa Kemmerer,2015-05-01 Contemporary Earth and animal activists rarely collaborate perhaps because environmentalists focus on species and ecosystems while animal advocates look to the individual and neither seems to have much respect for the other This diverse collection of essays highlights common ground between earth and animal advocates most notably the protection of wildlife and personal dietary choice If earth and animal advocates move beyond philosophical differences and resultant divergent priorities turning attention to shared goals both will be more effective and both animals and the environment will benefit Given the undeniable seriousness of the environmental problems that we face including climate change and species extinction it is essential that activists join forces Drawing on a wide range of issues and disciplines ranging from wildlife management hunting and the work of NGOs to ethics ecofeminism religion and animal welfare this volume provides a stimulating collection of ideas and challenges for anyone else who cares about the environment or animals *Food, Animals, and the Environment* Christopher Schlottmann,Jeff Sebo,2018-09-14 *Food Animals and the Environment* An Ethical Approach examines some of the main impacts that agriculture has on humans nonhumans and the environment as well as some of the main questions that these impacts raise for the ethics of food production consumption and activism Agriculture is having a lasting effect on this planet Some forms of agriculture are

especially harmful For example industrial animal agriculture kills 100 billion animals per year consumes vast amounts of land water and energy and produces vast amounts of waste pollution and greenhouse gas emissions Other forms such as local organic and plant based food have many benefits but they also have many costs especially at scale These impacts raise difficult ethical questions What do we owe animals plants species and ecosystems What do we owe people in other nations and future generations What are the ethics of risk uncertainty and collective harm What is the meaning and value of natural food in a world reshaped by human activity What are the ethics of supporting harmful industries when less harmful alternatives are available What are the ethics of resisting harmful industries through activism advocacy and philanthropy The discussion ranges over cutting edge topics such as effective altruism abolition and regulation revolution and reform individual and structural change single issue and multi issue activism and legal and illegal activism This unique and accessible text is ideal for teachers students and anyone else interested in serious examination of one of the most complex and important moral problems of our time

Evolution, Animal 'rights' & the Environment James B. Reichmann, 2000 The author of this study undertakes an investigation of the metaethical grounds of rights theory with special focus on the controversial issue of whether creatures other than humans can and should be considered true subjects of rights He contends that before assigning rights to this or that individual or group whether human or not we need to be very clear about what it is we are assigning to whom and why The book argues that the efforts to build a case supporting animal and environmental rights fail in their quest and that any such effort resting on a Darwinian evolutionary base is likewise condemned to fail The author investigates life phenomena followed by a detailed comparative study of knowing communicating and doing as these are observed in the human and nonhuman animal This is followed by an overview of diverse views advanced by contemporary environmental ethicists and animal rights advocates including Peter Singer Tom Regan J Baird Callicott Laura Westra and Don E Marietta Jr Conclusions drawn from this study include the claims that classic Darwinian theory provides no admissible premise from which to derive a theory of inherent inalienable rights no satisfactory explanation of the origin of rights and obligation can derive save from within the context of natural law theory the human person alone unqualifiedly possesses rights and the view that vegetarianism is an ethical mandate is neither compatible with

the Christian world view nor philosophically sound **In Nature's Interests?** Gary Edward Varner,1998 This book offers a powerful response to what Varner calls the two dog mas of environmental ethics the assumptions that animal rights philosophies and anthropocentric views are each antithetical to sound environmental policy Allowing that every living organism has interests which ought other things being equal to be protected Varner contends that some interests take priority over others He defends both a sentientist principle giving priority to the lives of organisms with conscious desires and an anthropocentric principle giving priority to certain very inclusive interests which only humans have He then shows that these principles not only comport with but provide significant support for environmental goals *The Animal Rights/Environmental Ethics Debate* Eugene C. Hargrove,1992-01-01 Reprints 11 articles and chapters of books that document the environmental ethics view of the animal rights movement exploring whether animal welfare considerations can provide a basis for an environmental ethic Offered as a view of wildlife to complement and challenge at times the animal rights literature which focuses on domestic animals and subjects of experiments Paper edition unseen 14 95 Annotation copyrighted by Book News Inc Portland OR *One Health: The Human-Animal-Environment Interfaces in Emerging Infectious Diseases* John S. Mackenzie,Martyn Jeggo,Peter Daszak,Juergen A. Richt,2013-11-22 One Health is an emerging concept that aims to bring together human animal and environmental health Achieving harmonized approaches for disease detection and prevention is difficult because traditional boundaries of medical and veterinary practice must be crossed In the 19th and early 20th centuries this was not the case then researchers like Louis Pasteur and Robert Koch and physicians like William Osler and Rudolph Virchow crossed the boundaries between animal and human health More recently Calvin Schwabe revised the concept of One Medicine This was critical for the advancement of the field of epidemiology especially as applied to zoonotic diseases The future of One Health is at a crossroads with a need to more clearly define its boundaries and demonstrate its benefits Interestingly the greatest acceptance of One Health is seen in the developing world where it is having significant impacts on control of infectious diseases *Encyclopedia of Animal Science - (Two-Volume Set)* Wilson G. Programs in Research Education and Testing Second Edition is the extensively expanded revision of the popular Management of Laboratory Animal Care and Use Programs book published earlier this century. Following in the footsteps of the first edition, this revision serves as a first line management resource providing for strong advocacy for advancing quality animal welfare and science worldwide and continues as a valuable seminal reference for those engaged in all types of programs involving animal care and use. The new edition has more than doubled the number of chapters in the original volume to present a more comprehensive overview of the current breadth and depth of the field with applicability to an international audience. Readers are provided with the latest information and resource and reference material from authors who are noted experts in their field. The book emphasizes the importance of developing a collaborative culture of care within an animal care and use program and provides information about how behavioral management through animal training can play an integral role in a veterinary health program. Provides a new section on Environment and Housing containing chapters that focus on management considerations of housing and enrichment delineated by species. Expands coverage of regulatory oversight and compliance assessment and assurance issues and processes including a greater discussion of globalization and harmonizing cultural and regulatory issues. Includes more in depth treatment throughout the book of critical topics in program management: physical plant, animal health and husbandry. Biomedical research using animals requires administrators and managers who are knowledgeable and highly skilled. They must adapt to the complexity of rapidly changing technologies, balance research goals with a thorough understanding of regulatory requirements and guidelines, and know how to work with a multi generational multi cultural workforce. This book is the ideal resource for these professionals. It also serves as an indispensable resource text for certification exams and credentialing boards for a multitude of professional societies. Co publishers on the second edition are ACLAM American College of Laboratory Animal Medicine, ECLAM European College of Laboratory Animal Medicine, IACLAM International Colleges of Laboratory Animal Medicine, JCLAM Japanese College of Laboratory Animal Medicine, KCLAM Korean College of Laboratory Animal Medicine, CALAS Canadian Association of Laboratory Animal Medicine, LAMA Laboratory Animal Management Association and IAT Institute of Animal Technology.

Laboratory Animal Husbandry Michael W. Fox, 1986-01-01. The laboratory animal environment: room for concern. Present standards and questionable conditions. Experimental variables. Social influences and pheromones. Social deprivation and isolation effects. Handling, socialization and caretaker effects. Genotypic and phenotypic variables. Alternatives and new directions. Behavioral and ethical aspects of pain and suffering in research animals. Animal health and welfare. Toward the one medicine. Animal rights, ethical issues and human obligations. *The Welfare of Laboratory Animals* Eila Kaliste, 2004-07-27. Animal welfare is attracting increasing interest worldwide but particularly from those in developed countries who now have the knowledge and resources to be able to offer the best management systems for their farm animals as well as potentially being able to offer plentiful resources for companion zoo and laboratory animals. The increased attention given to animal

welfare in the West derives largely from the fact that the relentless pursuit of financial reward and efficiency has led to the development of intensive animal production systems that offend the conscience of many consumers in those countries. In developing countries human survival is still a daily uncertainty so that provision for animal welfare has to be balanced against human welfare. Welfare is usually provided for only if it supports the output of the animal be it food work clothing sport or companionship. In reality there are resources for all if they are properly husbanded in both developing and developed countries. The inequitable division of the world's riches creates physical and psychological poverty for humans and animals alike in all sectors of the world. Livestock are the world's biggest land user (FAO 2002) and the population particularly of monogastric animals is increasing rapidly to meet the need of an expanding human population. Populations of animals managed by humans are therefore increasing worldwide so there is the tendency to allocate fewer resources to each one.
